*The RMS values are valid for a modulated AM signal.
*The term is valid for a distorted AM signal as well.
*ROOT MEAN SQUARE (RMS):
Root Mean Square is a way of comparing arbitrary waveforms based upon their equivalent energy. RMS voltage is the constant (DC) voltage that would be required to produce the same heat in a resistive load, indicating equivalent ability to do work. You can't use a simple "average voltage", since a sine wave has positive and negative phases that would average to zero, yet it still generates heat regardless of the polarity of the voltage.
The RMS method takes the square of the instantaneous voltage before averaging, then takes the square root of the average. This solves the polarity problem, since the square of a negative value is the same as the square of a positive value. For a sine wave, the RMS value thus computed is the same as the amplitude (zero-to-peak value) divided by the square root of two, or about 0.7071 of the amplitude. For a repetitive waveform like this, an accurate calculation can be done by averaging over a single cycle of the wave, but for random noise sources the averaging time must be long enough to get a good representation of the characteristics of the source.

well powerhouse.......all i can say is this....this thing is nothing
more than another example of hams not practicing what they
preach........i mean they get on here and whine about illegal amps but
a lot of them will sell a cber a amp in a new york minute......so what
purpose is this akc shit????? sdj is down on the
dome.................back quiet..............

It would appear the hams don't practice what they preach, I've been to
hamfests and have seen small CB amps for sale.
Now with all those hams around you'd think they would all run to the nearest

phone and call the FCC (you might also think they have that phone number memorised) but I did not see that happen. I think maybe 95% of hams don't care if you have a kicker. It's too bad that a few of them belive that illegal CB radio is society's number #1 problem today. They will spend countless hours in front of thier PC searching for illegal CB equipment so they can flood some FCC.gov mailbox, and also browse newsgroups to spread the word that illegal CB is evil and must be stopped at any price. And they will do this 365 days a year, 366 on leap year.
I say it's thier life and they can live it however they want, and if cleaning up the CB band is thier #1 priority then all I can say is go for it, because I do feel a little sorry for these poor hams. Thank god most hams do have a life outside CB radio, or we would not be able to walk down the street without being reminded that:
1: the freeband is not free
2: CB radio operators are not welcome on 10 meters
3: CB amps are illegal
4: removing modulation limiters will cause distortion
5: your illegal linear amp is not really "linear"

Ok, thanks... I didn't know if it concerned us under the 27.405MHz or not.

Phew!!! As they say?!

It means nothing of the kind. The problem is not 27 MHz per se but 27 assorted megahertz in the microwave spectrum. Several semi-literates have stepped into this bucket.

There are assignments in the 415-999 range but the part above 27.68 is not used in the Americas because it is a common Marine assignment in Asia; 27.88 is the Emergency and Calling freq. It is 5 kHz swing FM on 20 kHz splits so you aren't too likely to hear it on your modified Super Whizbang.

4575. GE 3-5811B any good?

To bad it didn't say a portion of spectrum between 1,392MHz and
1,395.5.MHz has drawn the interest of companies, because if it did
you could legitimately post something like below on a amateur
newsgroup.

Federal regulators have set ground rules for the commercial use of
3.5MHz of wireless spectrum that was once exclusively for use by the
government.

No, I'm saying that AM cannot be described in PEP terms.

>*My definition came from the [Mobile Radio Handbook IEEE press]
>*I feel the need to stick with their terminology and description.
>*I think I see where you're going with the "envelope" thing.
>*You're saying that unless there's a envelope you cant measure in PEP?

PEP = Peak ENVELOPE Power.

>*If you correctly two-tone modulate a SSB signal do you see an envelope?

Have you ever heard of an unmodulated SSB signal?

>*Isn't there a crest at the upper and lower borders of the envelope?

Sometimes.

>*In a single tone modulated SSB signal isn't there a crest to the
>waveform?

Yes and no. The crest of a single-tone SSB signal is, as I said
before, a constant amplitude signal.

>*Let me put forth an example where PEP is a valid measurement without
>benefit of a modulated signal. The example entails applying 2,3 or more
>closely spaced carriers to an amplifier input. At the output you have
>those
>same carriers but, because the phases of those carriers will at some
>point

>can
>show. The output is measured in PEP, yet no modulation is applied to any
>of the carriers.

You are measuring the product of mixing, and modulation is a type of
mixing. In the example the carriers are indeed being modulated, just
not with audio.

Considering that the product of mixing is going to be more than twice
the lowest input freq, then I would assume that there is some way to
filter off the carriers. In that case, PEP might be a proper method of
measuring the product of mixing.

> This from several references including Eimac's
>book [Care and Feeding of Power Grid Tubes] which I'm
>betting is on one of your bookshelves.

Actually it isn't.

>---------------------------
>> A unmodulated carrier (AM) has no envelope, so PEP is going to be zip.
>> Even if you wanted to try and measure AM power, AM has two
>> sidebands that cancel each other when measuring power, which is why
>> your wattmeter doesn't move when you speak into the mic.
>
>*How do the sidebands cancel each other?
>*Isn't AM an additive process?

...(holy cow!)
Alright, let's start from scratch. AM is composed of non-variable
carrier power, and two sidebands with power that varies with the
modulation. The modulated signal voltage swings equally above and
below the carrier voltage, and averaged over a full cycle of
modulation will cancel each other out. The added power is there, it's
just that the power is balanced above and below the carrier power.

Now take a 4 watt carrier and modulate it 100%. The total effective
(true, average RMS, dissipative, effective, thermal, etc.) power of
the signal is 6 watts: 4 watts in the carrier and 1 watt per sideband.
The laws of physics prevents effective power from getting any larger
than that. But we can also measure the RF RMS power on the crest of
the modulation envelope (PEP) as 16 watts. The problem is that you
might have an unmodulated 16 watt carrier (16 effective watts), or a
100% modulated 4 watt carrier (6 effective watts), or a 7.2% modulated

12 watt carrier (12.02 effective watts, and someone should check my
math on that). The point is that PEP cannot measure AM because it is
not a true or accurate power reading, and by itself it means nothing.

SSB has no carrier, so the modulation peaks are not limited by carrier
power. This is why SSB must be measured as a peak value and not an
average value. Also, the RF power and the modulation power are always
in the same proportion to each other in the output signal, so any
measurement of the signal is a measurement of the envelope. Peak
Envelope Power must be used to measure SSB power.

BTW, and a little OT, the only way to get a 600 watt 'swang' from a 50
watt carrier is if the carrier power increases with the level of
modulation, which means the amp is re-modulating the signal. When you
remodulate a sideband you get sidebands for each sideband being
remodulated. I think a good term for this would be "modulation
stacking", and the result is a very wide clusterfuck of sidebands,
subsidebands, sub-subsidebands, etc.

>----------
>> Some meters cheat and include a "sample-and-hold" circuit to measure
>> the AM power peaks, but this isn't accurate because it doesn't measure
>> the power at the valley, nor does it subtract the carrier power from
>the

>composite
>pattern that represents a near zero value and only measure the peaks? If
>you
>need to see the "valleys" then a scope is needed.
>*Can't you simply look at the peak and then subtract the unmodulated
>reading?

Yes, but you will need to measure both peak power and carrier power,
and then do the math. And don't forget that your peak power isn't
going to represent your real power unless the modulating audio is a
sine wave. So the question is why bother with all the effort to
measure a peak power value within a limited power range, especially
when you can't even translate it into a true power value? Since you
already know that your peak power is going to land between carrier
power and 4 times the carrier power, and that your true power is only
going to max out at 150% of carrier power, why do you need to find PEP
at all? And even if you really need to know what PEP is at a given
level of modulation, why not just calculate it from the modulation
index (or percentage)? Seems like a vast effort with... aw, forget it.

That's what I now call "modulation stacking". Your carrier is
increasing in proportion to the modulation, which is basically
remodulating your modulated input. The result is that the sidebands
have sidebands, and those sidebands will have even more sidebands, ad
infinitum. A real noisemaker, I'm sure.

On the front of the Linear Amplifier there is a Stand-By / Operate
Switch, this switch is placed to the "Operate" position.

I like it when you get all wrapped around the axel, it shows.

The spectrum they are referring to is the part of 27 Mhz that was reserved
for government use. This is in the area slightly above CB and slightly
below the 10 meter amateur band. The US govrnment used these frequencies
in years past.

I'll vouch for Joe's authenticity. I know him from other boards and he's a "straight-shooter." Calling someone a troll without a demonstrated track record of troll posts is certainly not nice.

BTW, their talking about a 27 MHz wide swath of frequencies, not 27 MHz.

Hi All,

Don't know who all from the Detroit Area (or more locally, The Downriver Area in Detroit...) read this Newsgroup...

But I just learned of some very sad news.

A Long time close and Personal friend of mine passed away this week.

"Beer Drinker" Or PJ as his was known to most of his close freinds died of a heart attack... He died in his sleep.

Thanks to jscotty@aol.com for passing this information on to me.

My father and PJ used to talk on Channel 4, many years ago.

He will be missed by his freinds and channel 14 just won't be the same without him.

Rest in Peace, Beer Drinker, You will be missed by everyone...

Signed,

Speed Demon and ALL of your friends on Channel 14, 4, 16...

I am the GOD of HELL Fire!

Hi All

The report is misunderstood by most of you. The space is up over 1 Gig, {GHz) in the high end of UHF not 27 MHz at the high end of the HF spectrum. I think we all know that one day the report will be real unless we can find some legitimate use for CB and stop all the bullshit that goes on from 26 MHz to 28.5 MHz. Below are some excerpts from the article for your reading.

Federal regulators have set ground rules for the commercial use of 27MHz of wireless spectrum that was once exclusively for use by the government.

The spectrum that has gathered the most interest for possible use sits between 1,670MHz and 1,675MHz, a range that isn't used by many government agencies. The FCC has decided to license this spectrum to just one company, and it will have to share the spectrum with any government-generated broadcasts. ArrayComm, AeroAstro and another company, Inside Trax, have all expressed interest, according to FCC filings.

Another piece, between 2,385MHz and 2,390 MHz, will also only have one licensee, the FCC has decided. But this space has "a lot of government incumbents," making it less attractive for commercial use, the FCC said.

A portion of spectrum between 1,392MHz and 1,395MHz has drawn the interest of companies that create private cellular telephone services for businesses or households, the FCC said. The FCC does not plan to restrict the number of licenses to use this bit of bandwidth.

The FCC heavily restricted the use of spectrum between 1,427MHz and 1,429.5MHz. This portion of bandwidth is used to broadcast information from monitoring devices that are worn by patients in hospitals, nursing homes or other medical facilities. Broadcasts from these devices will get priority use, the FCC decided. To share this space means a private company might have to interrupt its broadcasts if the airspace is too crowded.

This is OLD NEWS and you read it wrong. It was reported about a year ago and what it is, is 27 MHz OF BANDWIDTH.....Not the 27MHz BAND!
Train

"Joe Cormier" <joe_cormier56@hotmail.com> wrote in message news:SQeF8.22291$cT2.2025059@news-nb00s0.nbnet.nb.ca...
Hi all!

The FCC has given the rights to purchase to commercial business's to do whatever they want to with our 27MHz Frequencies...

PS- I sincerely hope this is a hoax of some kind (cause, this could very be the end of 'CB' as we know it)?!

- news.cnet.com under Communications is where I got the info for those who's wondering.

Source record: 124501

Hi, all. I have had my eye on some Midland radios. Specifically the 77-285a, 77-285axl, and the 79-290. Are the 77-285a, and 77-285axl radios A.M. only? What frequencies can these be modified to talk on?

Also, can the 79-290 be converted for extra channels? If so, what is the frequency range? Once converted, does the 79-290 have the F.M. mode? One last question, what are everyone's opinions on these particular models of radios, and your overall opinion of Midland CBs? Most people seem to go for the various export models, and the Uniden and Cobra lines. Thanks for your answer(s)

> up unwanted noise @%$#-for-Brains

Hello @%&#-for-Brains.

Improper tuning of the antenna will not increase noise.

There is a small chance that a bad ground might do so - although the
usual result is a lowering of all signals, including noise.

It depends on what you mean by "bad coax".

In any case, it is not the SWR that is causing any increase in noise.
Both the high SWR and noise would be symptoms of some other problem.

Since there is a reciprocal relationship between transmit and receive,
a higher SWR will usually mean a lower noise level - although that
difference may be hard to detect.

There is the story of the janitor who saved all his life, bought a Ferrari and wanted it blessed. Having seen blessings of all sorts down at the local parish - animals, throats, what have you - he went in to see the priest. The priest asked, "What's a Ferrari?" and our hero replied, "With all due respect, Padre, you are not the man to bless my Ferrari." He spent a day with similar results with the Methodists, Baptists, and even a storefront preacher. No Luck.

Out of sheer desperation he wanders into the local Unitarian Society and asks if they will bless his Ferrari. "Wow", exclaims the minister, "a Ferrari! Can I drive??" And they spend the afternoon in the Ferrari really blowing it out. When they return the janitor says, "You are definitely the man to bless my Ferrari" to which the UU minister replies, "What's a blessing?"

I try to limit my practice to confession and absolution, blessing only the occasional credit card stub. There is no way I take the promotion to Cardinal in this day and age. But like the Church, love the sinner and hate the sin. The sin in most cases is some combination of rank stupidity with total lack of class. Build a decent amp that is not an attempt to defy the laws of physics and I will attend the ceremony legal or not.

Oh sure; you're a busy man. All you ever do is post nonsense in
rec.radio.cb! Busy? I don't think so.

My questions were: 1. Since you're only a hambozo wannabee, why are
YOU so upset about what people do on CB? 2. Since the interference you
mentioned is primarily the product of CHEAP CONSUMER ELECTRONICS, why
don't you campaign to get the manufacturers to improve the cheap
phones and TV sets, etc., instead of whining on and on about so-called
"illegal CBers"?

> >You promote
> >illegally modifying a linear amplifier for 11m in one thread

> Voobner, promote illegal linear use? Good luck on that one. LOL

YOU posted it! Now you're denying it? Sorry; it's there for all to
see: YOU encouraged the buyer of a large amp to get it modified for 11
metres!

> >and can't
> >stop informing people that the use of 10m radios and the like are
> >illegal on 11m??
>
> They are in fact illegal to use. Do you want to see the regs again?

Nope. We know the Regs. Some people just don't care. Your point?
(Other than hoping someone will encourage you to waste more bandwidth
by posting the Regs yet again?)

> >What's wrond with this picture?

You couldn't explain it if you managed to put on a thinking cap! Ever
try calling the FCC's complaint line? Give it a try and get back to
me.

BTW, I have a very nice Uniden HR2600 with ChipSwitch available.
Original box, hand mic, power cord, but no mounting bracket (that's
the way I got it). Asking $200 plus shipping. Email if interested.

(Aaron, don't bother.)

Some of them didn't have the Classic Cybernet board in them, like the one she has. IF that one is a thin CB, it is a good one. If it is short and "stubby," then it isn't as good. But if it is still working, you have a good one. I've seen a lot of problems with those short stubby ones in the past!

QUESTION TO YOU AN OTHER ASSHOLES.................

HOW MANY FRIENDS (correct spelling) DO KEYCLOWNS HAVE???

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

Heehehehe, this is really funny, I can not think of a forum anywhere that there are not people listing Amps, Radios or whatever for sale.

Get a life! I have no connections with any wholesaler, retailer and do not endorse any, and am not responsible for what people post on the forum, so you are just blowing wind.

The links are below if you would like to check out the forum for yourself by the way.

Take Care all

Hi all,

From time to time, I read some guys on here asking about the AR-3500. Well, the current edition of CB World Informer (CBWI) is featuring this rig as a "look back." This was probably my favorite dedicated 10/11-meter rig of all time with a receive that was quiet as a church mouse, yet as sensitive as a mother-in-law.

http://cbworldinformer.com/200202/200202.htm

Enjoy the article.

73 de Bert
WA2SI

BTW, I still have mine packed away in the original box and it looks like the day I bought it. It'll pull some 10-meter duty and be retired to the display case next to the Royce 1-639.

> My questions were: 1. Since you're only a hambozo wannabee, why are
> YOU so upset about what people do on CB?

a) I care what people do with a public resource. The citizens band is
not your privately owned playground (as IceCold would have it).

b) Being a ham or potential ham has nothing to do with supporting CB
rules. It has to do with consideration for other CB users.

>2. Since the interference you
> mentioned is primarily the product of CHEAP CONSUMER ELECTRONICS, why
> don't you campaign to get the manufacturers to improve the cheap

> "illegal CBers"?

Why should the owners and makers of consumer electronics have to pay
BECAUSE YOU WANT TO BREAK THE LAW? That's like telling your neighbors
it's "their fault" they can hear your stereo system played at
ear-splitting volume at 3AM. Or blaming the building contractor.

> > >illegal on 11m??
> >
> > They are in fact illegal to use. Do you want to see the regs again?
>
> Nope. We know the Regs. Some people just don't care. Your point?

My "point" is that you infer that when it comes to the law, you "JUST
DON'T CARE".

There are many people out there that are "on the fence" with regard to
whether or not to follow the law or not. Those are the people that
will hopefully read what is discussed here and decide that it might
not be a good idea to break the law. THOSE are the people that we're
trying to reach. Those that are hopelessly incorrigable will continue
their anti-social ways until the law finally catches up with them. Of
course you can't blame those of us that understand the purpose of law,
from assisting the people entrusted with enforcing the law, by
gathering
evidence for them. It's called looking after our best interests.

There's no such thing as a commercial 10/11 meter rig....legally at least. And what the hell is a CB magazine trying to promote by showing a radio tuned to 28.400?

-Aaron-

PS> Fascinating admittance (below) on how the "phoney 10 meter radio" biz got going in order to service illegal 11 meter ops.

February 2002
Web Edition
A Little History On The Clear Channel Corporation People And 10 Meter Radio

Sam Lewis of RF Limited/Magnum contributed some background info on radio and the players in the 10 Meter market they associated or partnered with going back to 1969. The story is interesting and lends insight to how 10 Meter radios evolved. Many AR 3300 and AR 3500 owners probably have no idea how deeply dedicated these people are to the radio business. They've strived to produce the best possible product while keeping it in reach of the average radio operator. Other companies broke the price barrier, but none ever matched the performance or simplicity of use of the Clear Channel Corporation Ranger transceiver.

Many people are still confused and think the AR 3300 and AR 3500 were made by RCI (Range Communications Incorporated). This is not true; Clear Channel Corporation developed the Ranger AR 3300 and Ranger AR 3500 and these transceivers were produced for them by Nissei in Tokyo Japan. On the other hand Ranger Communications Incorporated has there own factories in Malaysia and China, The RCI brand is brought in through their American subsidiary. RCI and CCC are two very different companies with different philosophies. RCI produces many other radios for other labels like Galaxy, Superstar, Connex, General, Virage, Mirage, and at one time even Cobra as well as others. Clear Channel on the other hand conceived, designed, and oversaw the production of the AR line of radios. These radios were developed to compete performance

wise with the big buck HF rigs. These radios were developed to meet the demands of the real amateur radio market as well as the 11 Meter market.

4680. FS: Four Heathkit GW-21 Citizen Band Walkie-Talkie Transceivers

Newsgroup: rec.radio.cb

http://mywebpages.comcast.net/mnowlen/heath-gw-21-top.jpg

Four Heathkit GW-21 CB Walkie-Talkies from the 1960s. I had a similar set as a kid. I got these with the intention of restoring them but just don't have the time. Two look to be complete and fairly clean with all controls and whip antennas. The other 2 can be used for replacement or spare parts. Two sets of snap-on leather straps included. Someone with the time and ability should be able to make a good pair. Sold as-is.

$35 for all four
Plus actual shipping charges
Send Zip code for shipping costs

Please email if interested,

Mike

hey i just got a used uniden grant lt (xl with lites) and it has been modified with two switches that give it acsess to upper and lower channels band.. some down in the26.xxx area some in the 28.xxx area... what are these good for?

I haven't heard anything on them yet.. do people use these freq for anything anymore?

Any advise (other than THESE ARE ILLEGAL) whould be helpfull. would love to use these theres no clutter, but theres also no one to talk to!

thanks!

The long and the short of it is that frequencies below 28.0 are held by (mostly) government agencies and it is hard to ever find them used. You will likely get a lot of heat on this, but ignore the flames. Simply having a modified rig makes it unauthorized for use; use above 28.0 will cause a lot of problems with amateur operators as this is an international ham band, for which you must possess the proper license to use it. A lot of guys 'freeband'. I will not pass judgement on anything else discussed beyond this. I'm sure you'll hear from a lot of other folks. Just make sure you are wearing your asbestos long-johns!

73 from Rochester, NY
Jim

Please do not misunderstand, I am not trying to bust your chops but simply tell you how it is.
BTW I suspect that one of the two switches is for the .45 and .95 RC channels and may play a part in your problem.

28.0 to 29.7 is an Amateur allocation worldwide. It is ours and we intend to defend it of which more later. Amateur rules do not allow us to talk with you nor require us to respect your presence in any way. As a receiver test, use USB in the range above 28.300.

Any number of rigs can be modded to add channels in 450 kHz most ending at 28.305 so it is not too surprising that truckers on 19 (27.185) go 'two up' and end at 28.085. As it happens this is in a narrow-band (Morse, digital, etc.) part of our band so phone sigs show up like the proverbial sore thumb. I for example am part of a group that is building -- in fact have built -- some control logic that fires up some of the many cameras along the Interstate to take pix of people running in our band. And they do work at nite very well: in my youth there was a book titled Never Trust a Naked Bus Driver; he was right. Right now, we just rattle the bars at major companies but the Commission will at some point get the results of our handiwork and that can be $10k a pop but usually is about $3,000. Next time you see the minicam report on your TV news, think of us. There are several groups around the country these days.

Keep it below 28 and above 25 and you can do what you like with no problem from me but at 28 we get all grumpy and surly.

May ye get thy receive problem fixed.

Dick N&#65533;BK

Vaughan, you show your drooling stupid assedness again. Any amp that
operates outta the box between 24 and 35 mhz is illegal. It has been
so since 1977. Get the facts you gay keyclown.

I mentioned nothing about the legalities, Aaron. The statement still stands.

>And what the hell is a CB magazine trying to promote by showing
>a radio tuned to 28.400?

That's the press photo. 28.4000 MHz was likely shown to attract the Novices and Tech+'s. I don't think the "CB magazine" is trying to promote anything. It appears that they are just doing a historical piece on a very popular 10/11-meter rig from the 80's. You're not a revisionist, Aaron...are you?

In most cases, a legal radio is more then enough to get in your
neighbors stuff for a 1/4 mile.

Sorry, you lose again. Call the FCC complaint number and see what they
have to say. Such interference is laid at the feet of CHEAP CONSUMER
ELECTRONICS. That is to say, cheap phones, cheap TV sets, cheap
stereos. And where did I ever say I "want to break the law?" You lose

yet again. I don't break the law. Again, call the FCC complaint line
and see what you get.

I don't think anybody was talking about "legally." It IS, however, one of the alltime favorites among both 10 and 11 meter enthusiasts, thus "10/11-meter" rig. Just "tellin' it like it is." I suppose that CBWI was trying to "promote" historical accuracy.

It takes two receivers linked to a common control point to prevent exactly what you suggest and a bit of modification to only respond to modulated sigs. The relationship of agc voltages, their direction, and absolute magnitude is what trips the recorder. It will still false a bit on skip but we do manage to get thru the day with only one video cassette. That part of the logic is mine and it is not a lot different from the problem of a multiple - receiver repeater. It is also necessary to run an L-pad attenuator on the receivers so you gotta have a bit of moxie on the receivers to interest them at all. And being in a part of the band where phone is not allowed makes the job a lot easier.

By all means put it on 10 while the spots are still up. Looked up your link and it looked like a fine piece of hardware by any standards. Notice the FM swing was 1.5 kHz which is more what would be expected in a narrower channel than 10 meters usually uses but WTH. Sounds like a lot of fun.

Go for it.

I would recommend a good grade industrial extension cord. Mounting the amp right below the antenna would kill them lousy SWRs dead in their tracks. Just pump the 120 VAC you are undoubtedly using right up that there on the extension cord from the outlet behind the freezer.

About the only thing I didn't care for was the segmented light bar meter. I
don't particularly care for the digital bar meter on the HR-2510/Lincoln
either, but the performance overshadows that minor annoyance. I'm an analog
kinda guy. It was a big reason I chose the FT-840 over the IC-718.

Duh!

And this is just the tip of the iceberg, folks.

I have to laugh at Jim vainly trying to explain why it's OK to use
allocations that belong to people other than the ARS. And then there's
Dick's equally ridiculous stance suggesting that he'll defend his
property - but he could give a crap if the neighbors are looted.

Neville Chamberland's "we'll let the Nazis take Poland and they'll
stop there" strategy comes to mind.

4721. Local enforcement of FCC rules

Newsgroup: rec.radio.cb
Date: 2002-05-19 02:11:28 UTC
From: sparky@cet.com
Message-ID: <3ce7078d.1592660@news.cet.com>
Source record: 124635

Here's an interesting thought: Since the FCC prevents state and local governments from creating laws that conflict with FCC regs, why not write up their own RF regs just outside of the FCC's limitations? For example, a city or state could pass a law prohibiting CB power in excess of 5 watts instead of the FCC's limit of 4 watts. They could then enforce CB amps and modded radios without the FCC's permission, leaving the FCC to decide what to do with CBers between 4 and 5 watts. Is there any law that says local LEAs can't do that?

What I have heard from Truck Drivers lately is shocking. They tell me that LOUSY CB Shops are springing up all over da land, and ALL of them do NOT know what they are doing, and/or are thieves. I have been in the business for almost 23 years now, and I would recommend that NO ONE gets into this business. Veteran Truck drivers also recommend that NO ONE get into being a driver these days, because of the current DEPRESSION we are in, and plank #6. These CB shops I think just cater to truck drivers, and not the mobeels and Bases that non-truckers have. Does anyone else hear this news too?
Dave

Yep, I got a call from an old customer of mine (for years) and he said a friend of his was looking for a CB Base Station. He went to Rats Shack and the clerk DIDN'T EVEN KNOW WHAT A BASE STATION IS ! Can U believe it?! What the word was is that NO ONE is making N8 approved voobled CB base stations any more! IS this true? Does RS have answers?! NO they don't! Any other feedback on this?
Dave!!!!!!!!!!!!!

Yes, Sparks, I'm afraid there is. It is called Federal Pre-emption. When the Feds own something, it is pretty much theirs and they own communication. The limited exemption to this that is provided allows the locals to enforce the regs word for word and only certain ones at that.

Has a problem in principle to be sure but it is the only practical
approach. I am not going to spend my life defending things that the
owners do not seem to care much about and about which I know little.

Defending my minor abode against burglary and fires does not imply any obligation to defend my neighbor.

Actually the hard part of the pix thing is which lane to concentrate on. The electronics is fairly straight-forward for my part of it: set up two receivers and send the AGC voltage to a central point on link transmitters and keep track of it with periodic sampling compared to the last sample. A rising characteristic in both receivers (should mention that they are away from the cameras by a fair distance) cocks the system with the high one indicating direction. When it peaks and starts down while still rising in the other you start the tape until it gets higher in the far receiver and you turn it off. As well as the lane thing you do have the problem of the guy who starts or stops transmitting in the trap zone so you don't nail everyone by all means and some guys license plates are dirty and sometimes you just see glare off the windshield. But you get enough to be interesting for what amounts to a cheap lash-up.

The interesting part of the caper is that the outlaws have pissed off enough people to where getting cooperation is not a big issue. I can be the world's greatest techno-wienie but I don't own the cameras and certainly do not have the pull to get them on the overhead girders. It helps, of course, that most of the groups involved have Amateurs doing the work. But the prevailing opinion is 'Shoot the Bastards at Dawn unless we can borrow a spotlite sooner."

Now say hypothetically that I was a fanatic and chose to defend the Asian Marine band, 27.67 to 28. http://www.vkham.com will give you the freqs. The one I would pick to monitor is the Calling/Emergency channel at 27.88 FM. I don't know if this is in use much anymore but I do know that an American QRMing it doesn't have a clue either. If this is an issue the proper approach is for the Australian or whatever government to bitch loudly to the FCC and the proper Congressional committees and get the bux to fire up the remote DFing 'pods' the Commission uses these days and let the head-busting begin. It just ain't my problem.

As Carl Jung suggested, I have to tend my garden, make it the best I can, and save the world one garden at a time.

Dick N&#65533;BK

Aaron, I have to admit, I've been asleep at the switch. I try not to flame folks, but you are correct. Frankly, anything other than the legal 40 channels is not legal. I still try to avoid the flames, but can't justify the other stuff. I would get upset about the stuff above 28.0, but anything other than the authorized 40 channels is ... um ... how do we say 'illegal'? Gang, you can flame away, but if you were watching a ball game and suddenly someone blares over the game 'audiiooo .... ' ... well, you might feel differently.

I have no idea, but I thought certain keyclowns might want to read
this forfeiture order from the FCC.

$13,500! It sure sounds a LOT more serious than a jaywalking ticket
(or going 56 in a 55 mph zone)!

-Aaron-

Released:ï¿½ April 20, 2001
ï¿½
By the Chief, Enforcement Bureau:
ï¿½
1.ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ In this Forfeiture Order ("Order"),
we issue a
monetary forfeiture in the amount of thirteen thousand five hundred
dollars ($13,500) to Jerry Smith for willful and repeated violations
of Sections 95.409(a), 95.410(a) and 95.411(a)(1) of the Commission's
Rules ("Rules").[1]ï¿½ The noted violations involve Mr. Smith's
operation of a Citizens Band ("CB") Radio Station with a
non-type-accepted transmitter, with a transmitter output power greater
than four watts carrier power in the AM (A3) mode, and with an
external RF power amplifier.

2.ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ On January 8, 2001, the Commission's
Philadelphia,
Pennsylvania Field Office issued a Notice of Apparent Liability for
Forfeiture ("NAL") in the amount of thirteen thousand five hundred
dollars ($13,500) to Mr. Smith for the noted violations.[2]ï¿½ Mr. Smith
has not filed a response.ï¿½ Based on the information before us, we
affirm this forfeiture.

3.ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ Accordingly, IT IS ORDERED that,
pursuant to
Section 503(b) of the Communications Act of 1934, as amended

("Act"),[3] and Sections 0.111, 0.311 and 1.80(f)(4) of the Rules,[4] Jerry Smith IS LIABLE FOR A MONETARY FORFEITURE in the amount of thirteen thousand dollars ($13,500) for operating a CB Radio Station with a non-type-accepted transmitter, with a transmitter output power greater than four watts carrier power in the AM (A3) mode, and with an external RF power amplifier, in willful and repeated violation of Sections 95.409(a), 95.410(a) and 95.411(a)(1) of the Rules.

4.ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ Payment of the forfeiture shall be made in the
manner provided for in Section 1.80 of the Rules[5] within 30 days of the release of this Order.ï¿½ If the forfeiture is not paid within the period specified, the case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act.[6]ï¿½ Payment shall be made by mailing a check or similar instrument, payable to the order of the Federal Communications Commission, to the Federal Communications Commission, Forfeiture Collection Section, Finance Branch, P.O. Box 73482, Chicago, Illinois 60673-7482.ï¿½ The payment should note the NAL/Acct. No. referenced above.ï¿½ Requests for full payment under an installment plan should be sent to: Chief, Revenue and Receivables Operations Group, 445 12th Street, S.W., Washington, D.C. 20554.

5.ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ IT IS FURTHER ORDERED that, a copy of this Order
shall be sent by Certified Mail, Return Receipt Requested, to Jerry Smith, 125 Commonwealth Avenue, Claymont, DE 19703.
ï¿½
ï¿½
ï¿½
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ FEDERAL COMMUNICATIONS COMMISSION
ï¿½
ï¿½
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½

My beef here is not really focused on this particular radio (although why illegal use of amateur equipment should be a suitable subject for a CB magazine eludes me), it's about the sudden popularity of "10 meter radios" with CBers.

There is a lot of misrepresentation and confusion (some of it intentional) among CBers as to what a "10 meter radio" actually is. Most of this confusion is propagated by black market dealers of non-type accepted equipment designed to be used on 11 meters. I think it's irresponsible for a CB magazine (which should have the best interests of the service at heart) to give a wink and a nod to the use of non-type accepted equipment on CB by popularizing the term "10/11 meter".

Imagine the impression the uninformed buyer gets when he's being marketed a "10 meter radio" (wink wink) that is "illegal to use on cb" (wink wink) that covers "25 through 29 mhz" (wink wink). The insinuation is that it's OK to break FCC rules. But the buyer is left

to himself to decide which rules he should break. Just using the radio on CB is a violation (and the dealer is encouraging him to feel that he won't get caught), so why shouldn't he use the radio above 28 mhz too?

Hi Prof.
I Just stumbled on this thread as I don't get much time on the ng at the moment.

I have seen exactly the same probs with the 2950. The cause was exactly what you and one or two more have mentioned, RF feedback into the VCO. There were reports of this problem with a large number of these radios that came over here.
The problem stopped once the cover was off and came back as soon as the screws were put in. Even with the cover on but screws out it often worked fine.

I came to the conclusion that the path for the RF ground was causing RF to be re-radiated into the VCO, so I added extra coupling capacitors between the chassis and board common.
That cured it 100%.

A film crew was on location deep in the desert.
One day an old Indian went up to the director and said, "Tomorrow rain."
The next day it rained.

A week later, the Indian went up to the director and said, "Tomorrow storm."
The next day there was a hailstorm.

"This Indian is incredible," said the director. He told his secretary to hire the
Indian to predict the weather for the remaining of the shoot. However, after several
successful predictions, the old Indian didn't show up for two weeks.

Finally the director sent for him. "I have to shoot a big scene tomorrow,"
said the director,
"and I'm depending on you. What will the weather be like?"

The Indian shrugged his shoulders -
"No clue," he said. "radio broken."

~~~~~~

Some actual tech support conversations...

Tech Support: "Ok, now click your left mouse button."
Customer: (silence) "But I only have one mouse."

Tech Support: "I need you to right-click on the Open Desktop."
Customer: "Ok."
Tech Support: "Did you get a pop-up menu?"
Customer: "No."
Tech Support: "Ok. Right click again. Do you see a pop-up menu?"
Customer: "No."
Tech Support: "Ok, sir. Can you tell me what you have done up until this point?"
Customer: "Sure, you told me to write 'click' and I wrote 'click'."

Tech Support: "What does the screen say now?"
Customer: "It says, 'Hit ENTER when ready'."
Tech Support: "Well?"
Customer: "How do I know when it's ready?"

Tech Support: "Ok, in the bottom left hand side of the screen, can you see the 'OK' button displayed?"
Customer: "Wow. How can you see my screen from there?"
Tech Support: "Years of training..."
~~~~~~

Customer: "I received the software update you sent, but I am still getting the same error message."
Tech Support: "Did you install the update?"
Customer: "No. Oh, am I supposed to install it to get it to work?"

Tech Support: "What type of computer do you have?"
Customer: "A white one."

Customer: "I can't log in to my account."
Tech Support: "Ok, let's look at your configuration."
Customer: "Ok... but I know that my User ID is case sensitive."
Tech Support: "Yes it is. Ok, what does it say in the 'User ID' field?"
Customer: "'Case Sensitive'."

>meter radios" with CBers.

Because in the real world, many on 11-meters use 25 watt 10-meter rigs that were designed just for that purpose. ("wink wink") That's a reality, here's another. "If you don't cater to your customer's wants, someone else will." Remember the Pop'Comm principle?

>There is a lot of misrepresentation and confusion (some of it

>of non-type accepted equipment on CB by popularizing the term "10/11
>meter".

I don't buy the "ignorance" plea, Aaron. If you're interested enough to buy a rig like the AR-3500, (Approx. $300.00 to $350.00 in 1989.) you should really have done your homework. So now we should limit the use of offensive terms as well, like "10/11-meter radio," despite their accuracy? What next, burn books on the subject? Those are out there too, you know? Too funny.

>Imagine the impression the uninformed buyer gets when he's being
>marketed a "10 meter radio" (wink wink) that is "illegal to use on cb"
>(wink wink) that covers "25 through 29 mhz" (wink wink).

Trouble with your eye, Aaron. Let's protect the consumer from their own ignorance.

I might be inclined to agree wrt truckstop shops and their marketing of Galaxy and Connex AM/FM only radios. (Channel 19..."2 up?") Good night, Aaron.

>president, did i miss any? i mean, i know i have the best, Rat Shack TRC-501
>but just in case.
>
>phil :)

The Good:
Uniden (Actually, the BEST!)
President (Which is made by Uniden)
Galaxy (Which is made by Ranger)

The Bad:
Cobra (In it's present form is made by Ranger, but with some pretty dubious quality control.)

The Ugly:
Midland (Worst receiver in the biz.)

Epilogue:
Cobra used to be made by Uniden and was once known as one of the best in the biz. Many (But not all.) Radio Shack rigs were also made by Uniden, but folks hated the "Radio Shack" moniker. Stuff made by Ranger can range (No pun intended.) from pretty good (RCI) to extremely poor. (Current Cobra)

It's just not worth it. Better to spend your money on antenna system improvements than an amp. Improves reception too. I sure don't know anybody who has the spare dough for a 13.5 Kilobuck NAL.

Correction: It would be the end of commercial business communications as we know it... There is no way the millions of CB users would go that easily! They would talk all over the tops of those business radios, effectively making any business communications if the band useless....

Kinda like what the ampheads do in the Citizen's Band, and what the
freeloaders do on the 11m commercial freqs and 10m ham band.

I came across an interesting one with HR-2510's a few years back. While tuning these radios, I would set a nice low dead key and when the cover was put back on the unit the carrier output would increase. This didn't just happen with one or two radios but a few hundred of them.While this didn't cause any real problems with the operation of the radio, it did cause me a few sleepless nights figuring out how to get the radio tuned the way I wanted it while allowing for this quirk. One good thing that came of it was a mod for 2510's that I have yet to see ANYONE do or write about. This might be the reason I had so many of them come to me for tuning.

>From: sparky@cet.com (Sparky)
Here's an interesting thought: Since the FCC prevents state and local governments from creating laws that conflict with FCC regs, why not write up their own RF regs just outside of the FCC's limitations? For example, a city or state could pass a law prohibiting CB power in excess of 5 watts instead of the FCC's limit of 4 watts. >>

Locals can only carry out the law as written by the FCC, they can't change it.

>They could then enforce CB amps and modded radios without the FCC's permission, leaving the FCC to decide what to do with CBers between 4 and 5 watts. Is there any law that says local LEAs can't do that?<<

The problem would be in convincing local enforcement that cb even still exists, let alone presents a problem meriting a law in the community. It's a nonissue. Even the original towns that jumped aboard the bandwagon of HR 2346 haven't done a damn thing concerning the leislation they strongly lobbied for.

Aaron, I have to admit, I've been asleep at the switch. I try not to flame folks, but you are correct. Frankly, anything other than the legal 40 channels is not legal. I still try to avoid the flames, but can't justify the other stuff. I would get upset about the stuff above 28.0, but anything other than the authorized 40 channels is ... um ... how do we say 'illegal'? Gang, you can flame away,<<

Why do you feel anyone would flame you for merely saying anything other than the authorized 40 channels are "illegal" ? That has never been a problem here...I am a bit perplexed to see you espousing a notion that plagues this board, as it is a technique often attempted with malice and you appear to be trying to confirm something that just doesn't exist, just a troublemaker saying it exists over and over. Feeding something that is repeated over and over doesn't make it anymore true.

>but if you were watching a ball game and suddenly someone blares over the game 'audiiooo .... ' ... well, you might feel differently.
73 from Rochester, NY
Jim<<

Here we have the infamous "what-if'" factor that when removed, decimates the entire crux of this silly attempt of Aaron's that you seem to be championing for reasons known only to you.
No flames, just a small reminder that most scenarios put forth by Aaron are based on "what-if's" and nothing more than innuendo, false accusations, half-truths and outright lies. The "what-if" angle is a desperate attempt at giving CPR to a soundly defeated and dead horse, but what-the-hey, this place would be boring without diverse opinions and the occasional believing of rumors.

Those freq's used to be busy in the 80's when I had one set up like
that. Not much activity these days but you will here some from time to
time. You show put a freq counter on there so you know were your at. I
used to hang around 27.555 (triple nickel) with no problems back then
but haven't done that in years. If your going to freeband, stay below 28
mhz as those cry baby hams will hound you if caught. Keep the power low
and enjoy the qso with whomever you do talk to above or below the 40.
Have fun
Randy

True enough. The real problem is in the vendors. In the newspaper inserts this morning Staples has advertised some 'walkie-talkies'. The $29.95 features a roger beep and up to a two mile range. The $39.95 offers little else and has 'up to a 2 mile range'. The third is $79.95. Wow. $79.95 seems a bit pricey - oh - 'UP TO A FIVE MILE RANGE'. Huh? If you carefully read the ad, this is a gmrs radio - 14 of the channels cover FRS and the rest are gmrs. I'd likely opt for that five mile range and guess what? You are supposed to be licensed for that radio. Nowhere in the ad does it mention this. What happens is that a lot of folks will buy that radio for its' range and sooner or later some business is going to have a couple of hunters on its' frequency. Some people (like Aaron) have flamed the newsgroup a lot, others have kept quiet. Myself, I feel the problem is in educating businesses and folks who use the radios. Unfortunately, businesses are only interested in making money. To some, that means trying to get repeat business. Then there are the EEI folks. In any event, businesses have virtually no interest in telling the whole story. I'm sure Staples would rather sell a bunch of those $79.95 radios than the $29.95 units. Calling CBers stupid doesn't help a bit. Some are very knowlegeable technically, most are simply communicators. There are reasons for the rules; like the highways, if there are no rules, no one will find much use of the airways. We like to watch television. We enjoy radio. We enjoy our cellphones. All are regulated to try and allow the maximum use of all our gadgets by everyone.

Suggestions, anyone?

Jim

Hi Guys,

This has nothing to do with CB Radio...

But there's this website that has a piece of Music on it, and I have
no the slightest clue as to what it is....

http://www.w8ch.com

if you've a broadband connection, you'll hear a piece of music song by
some choir in what sounds like french or german... My question is,
what is the song and what are they singing about???

This is in that obscure music dept... might be something quite old....

it's been buggin' me for a while...

maybe someone can help

might be a war song or something...

go listen and see what you figure out...

I too saw that problem Train, but just left
the carrier at a level, that when you put the cover
back on, the level was exactly where you wanted it.

What if your customer's wants are illegal? What if your customers
wants include 'quiet channels' (i.e. 28 mhz and above)? You're saying
that profit is ALL and manufacturers have no responsibilities to
society or lawfulness, Bert. A very ugly stance to take.

I'm saying that CBers should take responsibility for their service.
That includes "CB magazines", "CB clubs" and "CBers" in general,
especially the ones that have "done their homework". A little peer
pressure could drive the power junkies away. A little group effort at
getting the word out could prevent truckers from operating on 10
meters.

But, no they won't do even that. CBers are totally unwilling to police
themselves. So by default, they get put in a position of BEING
policed. And then they have the gall to bitch about it.

> >Imagine the impression the uninformed buyer gets when he's being

I can see fine. What's wrong with protecting the customer? Who could possibly lose out with such a proposition? Are you concerned that customers will know too much? I hope you don't want to dismantle the Better Business Bureau.

4792. The 2 WORLDS of CB RADIO !

Newsgroup: rec.radio.cb
Date: 2002-05-19 17:43:49 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3ce7e868@news.planetc.com>
Source record: 124657

Yep, there are 2. One is "where I come from." It is the world of Base stations, Mobeels in cars by everyday (local) people. This list includes freebanders, 'cause a lot of us all git there befo going Ham (except N8voobledum), which go from NO radio to FCC 6th plank NAZI ! This group also includes N8's friends, the BIG Power boyz, which are really in a class by dem selves!

Then there is the CB world of the Truck Drivers. They have different radios (Galaxies), different antennas, different channel (19), and different purposes on CB than the usual people do, unless they are travelling.

What is amazing to me being a CB shop that works for BOTH worlds, I see each world affect the other in strange ways. Because of the SHORTAGE of good CB shops that do Bases and cars, the truck driver world of CB has wandered into the car CB world, by their antennas & radios that only truckers use to buy, are NOW in some cars. AND the truck CB antennas are on CARS because they don't know any better or can't find anything better, because of a lack of secection from bad shops, or non-car CB shops. Back in the 60's I heard that Truckers were using BASE LOAD antennas on the big trucks. There was nothing else then so they had to use them. NOW things went full circle in that the cars use "truck" CB antennas. I know that there are some antennas that are neither for cars or trucks, but both. You in the business KNOW what I am talking about! Ain't you amazed like I am in what I see, in how the CB "shops" have degenerated into selling all the JUNK that comes down the pipe, to cars & trucks?! That will be a future post-- WHEN is a CB shop NOT a CB shop?! Is there 2 worlds of CB radio, or is there more?! Dave!!!!!!!!!

Oh my mistake, the post is to rrcb, why would I EVER assume he's
talking about a CB radio? Yes by golly, I'm sure (even though he
didn't say it) that he's talking about some other service where 5 KW
is legal. Perhaps FM broadcasting. Sure, FM broadcasters seek advice
in CB newsgroups all the time. LOL.

Easy enough to separate the base from the top tube and spray it
yourself with hammertone paint. You'll get good results and save a few
bucks in the process.

You are correct train. I could definately say, from a "knowing for sure"
standpoint, that EEI has NOTHING to do with 1 stop electronics.

Aaron, not a stance...just plain facts. As for your trying to attribute it as
"my stance,"...thanks, but not thanks.

>> Remember the Pop'Comm principle?
>
>No, I don't.

If you're interested, use a Google search. If not, then don't.

>I'm saying that CBers should take responsibility for their service.
>That includes "CB magazines", "CB clubs" and "CBers" in general,
>especially the ones that have "done their homework".

Agreed. So are you saying that history should be rewritten to suit your
"Utopian" vision of CB? I don't think so, Aaron. There are many different
facets of 11-meter radio ranging from those who feel that even questioning the
FCC rules is tantamount to treason all the way to those who truly couldn't care
less about anybody else any participate in "keydowns" on school grounds. I
simply don't lump them all into one basket.

>A little peer
>pressure could drive the power junkies away. A little group effort at
>getting the word out could prevent truckers from operating on 10
>meters.

This is something that I've said before and the FCC had a terrific opportunity
to exploit this with RM-9807. Even if the FCC had denied the petition but
explained that their hand were tied by ITU treaty requirements, they might've
been able to enlist the services of the vast number of 11-meter "hobbyists" in
self-policing the band. Instead they managed to alienate themselves fron a
constituency that made its feelings known to the point where the FCC actually
conceded that "the majority supported RM-9807." So where does that leave us?
SNAFU!

>But, no they won't do even that. CBers are totally unwilling to police
>themselves. So by default, they get put in a position of BEING
>policed. And then they have the gall to bitch about it.

First of all, who are "they?" Would that be ALL CBer's, Aaron? I don't think so
and you certainly do NOT speak for 'their" position. Given the ratio of the
number of actual bust of "CBer's" to the total 11-meter population, I don't
think they're being "policed" very much at all.

>I can see fine. What's wrong with protecting the customer? Who could
>possibly lose out with such a proposition? Are you concerned that

In <uea5hjr20t2mc8@corp.supernews.com>, "BobC" <123@hotmail.com> wrote:

bc.You can measure the PEP of a carrier because it is a sine
and has a crest. You can measure AM power because it has a
crest. SSB power is measurable in the same regard.

sp.Not quite. Remember that AM starts with a carrier and
audio is added to that carrier. SSB has no carrier. You could say that
SSB is pure modulation. The key word here is "envelope" (not "crest").
That envelope is created by modulation. So PEP is actually a
measure of the power of the modulation envelope, composed of both RF
and audio.

Are you ready for this?

I took the time to reconsider my thinking on this PEP thing. I'm going to
restate my original definition of PEP more concisely.

In so doing, I will be agreeing with you about the "envelope".

PEP is the maximum instantaneous power of a combination of two or more
signals measured at the crest of the envelope.

By adding the condition of "two or more signals" I am agreeing that an
"envelope" is necessary for a meaningful PEP measurement. We're still just a
bit farther apart on how that envelope comes to exist, the actual shape it
takes and how the shape effects the PEP readings moreso than an RMS one for
the same waveform.

I'll start with a SSB two-tone test. This test looks like an AM modulated
tone. The envelope varies as a sinusoid with a frequency of delta F.

When the rf voltages are out of phase, they cancel and the envelope is at a
null. When the two voltages are in-phase, they add, and the voltage at the
instantaneous peak is twice that of either tone. Because power is equal to
the square of the voltage divided by the resistance, when the voltage
increases by a factor of two, the power increases by a factor of 2 squared,
or 4.

Therefore, the PEP is four times the per tone power and twice the average.
The average is simply the sum of the individual tone powers as measured on a
true RMS meter. So if there's 2 tones at 1 watt each then the average would
be 2 watts.

So if I have 2 watts of power in each tone(or sideband) my average would be 4 watts and my PEP would be 8 watts.

Suppose you now have a third tone of 8 watts. The average now becomes 12 watts and the PEP will come to 24 watts. You might recognize this as a practical example of an AM signal.

As you add more tones, the peak to average ratios increase rapidly and the PEP varies as the square of the number of tones.

Taken a bit further, consider a SSB voice signal alone or in a double sideband AM signal. Although it appears as only one carrier in single tone test, it now represents a group of individual carriers due to the myriad simultaneous audio frequencies which make up the one sideband.

The same math constraints apply to this voice sideband as in the single tone tests of before with an exception. The individual simultaneous voice frequencies are rarely the same level as each other but they will still add in the same way as individual tones would, albeit, the resulting voltages will be unpredictable and varied considerably.

It would be impossible for a commonly available RMS type of wattmeter to deal with this waveform correctly. A peak reader is needed on SSB as well as AM for the same reasons.

Something about wattmeters may be in order. A power meter can provide inaccurate readings of average power in a couple ways. The first is when something other than a true RMS meter is used. Thermocouples, thermistors and diode detectors operated in the square law region are true RMS detectors. Power meters using diodes in the non-square law region have to be watched carefully to get an accurate reading of average power.

The second way is when the signal doesn't look like a two tone test. Any frequency components besides the two tones (including IMD) add to the average power linearly. If the 3rd, 5th, and 7th products are high(-15dbc) you might see an error of about 10% higher than the main tones on a average reading meter.

Peak type meters are extremely sensitive to harmonics. The power will add linearly to the measurement and cause errors. When using one of these meters it's best to put a harmonic filter ahead of it.

I gave you an example of a multi-carrier linear amplifier in a previous reply.

You said the cause of the increased output was due to mixing products and that the individual carriers were being "modulated". The carriers are not modulated and exit the amp intact but at a higher power. They do not have any remnants of the other tones in terms of modulation. The carriers are not mixed because there is no non-linear device intended to mix them. The outputs are simply the same carriers just at larger rms amplitudes and much higher PEP. I am leaving out the usual IMD products that all amplifiers produce because in this amp, the design minimizes these to levels well below an interfering value for our purposes.

For the reasons I stated earlier about the way tones add is how and why the output measured much higher in PEP than RMS

Examples of this amplifier are those used in Cellular / PCS base stations and CATV line amps. No form of mixing can be allowed and IMD is designed to be at an extremely low level.

Now I can say again, that PEP reading meters are viable on AM and SSB just as RMS meters are...as long as you understand the limitations of each.

In reality, most of Anal Aaron's statements are based on incorrect
assumptions: That all CBers are illegal and that anyone cares that
he's harping on it.

If I was watching a ball game and suddenly someone blares over the
game "audiiooo....", I'd start looking for a better constructed TV set
or a line filter since it's probably the CHEAP CONSUMER ELECTRONICS
that is at fault!

snip

Two tones are not necessary for a PEP measurement.

It is perfectly sound to use a PEP meter/measurment for a single tone SSB signal. If the measurement is accurate then the PEP measurement would show the same numerical value as the average power measurement.

As you know a single tone SSB signal is not distinguishable from a AM carrier other than a difference in the frequency. Therefore it is also accurate to take a PEP measurement of a AM carrier. This measurement may not be of much use, but it certainly is as accurate as the measurement of the single tone SSB signal.

4825. Decent Audio from a D104

Newsgroup: rec.radio.cb
Date: 2002-05-19 22:50:51 UTC
From: Richard McCollum <rmccollOMA@worldnet.att.net>
Message-ID: <f%VF8.25039$D41.794958@bgtnsc05-news.ops.worldnet.att.net>
Source record: 124687

There's a spread in this month's (June) QST about the venerable D104. I will admit to never thinking a whole lot of the 'Chicken Choker' then or now but I know that several people love the antiques and being a long-term griper about audio quality figured I should babble semi-coherently about how to make 1950 technology mikes operate decently with later equipment.

This unit is a high impedence, high output, crystal or ceramic type common at the time. Electrically, it is a 0.0015 uf cap. Now when someone says 'cap' think hi-pass filter and realize that the time constant of this bitchkitty will vary significantly with the input impedence presented to it. Across the 25-50k typically encountered it will sound weak and tinny where against a megohm it will be bassy which while sounding jake is no way to do communications. This turk seems to have been designed for 250k but cutting that to the vicinity of 150k will give it a nice rising characteristic which is generally admired for communication. If you don't like the really hi freqs, and it does increase bandwidth for no really good reason, put a 470 pf cap across the mike line and do it twice if you feel so called upon. Moral of the story: plug-n-play don't work with a D104.

Now it also happens that at the 150k load impedence the mike is perfectly capable of over a volt peak-to-peak which is unfortunate (unless you happen to own a Ten-tec) because most Amateur rigs overload the mike preamp somewhere in the .1-.2 range and I would suspect the same is true of CB transceivers (help, Sparky, Prof, Jay, someone) so we have another way to sound like garbage. So I find myself in the rather curious position of advocating a buffer amp in the circuit to provide a proper load to the mike and to provide some control of the output so as not to bomb the preamp in the rig. This, incidentally, is also a cute way to use the D104 where they put B+ on the mike pin or have it available in the jack. Icom ham rigs are lo-impedence inputs and this is almost mandatory where Yaesu can be fed direct thru a series 100k followed by 10 k to ground which does the match and attenuation in one swell foop.

Morals to the story: a mike is not a mike is not a mike. And with a bit of sense and some perfboard in a small box construction you can be in real control of the situation.

Any of this sound familiar with a D104?? BTW the handheld D104 has less output but probably likes something closer to half a meg impedence.

Dick NBK

I really don't think so. I think our difference resides in the actual
nature and differences of SSB and AM signals.

>I'll start with a SSB two-tone test. This test looks like an AM modulated
>tone. The envelope varies as a sinusoid with a frequency of delta F.

Assuming a fixed impedance, ok.

>Therefore, the PEP is four times the per tone power and twice the average.
>The average is simply the sum of the individual tone powers as measured on a
>true RMS meter. So if there's 2 tones at 1 watt each then the average would
>be 2 watts.

Whoa! You are mixing peak and average power, and you can't do that.
The PEP is the RF power at the peak of the modulation envelope,
nothing more.

>So if I have 2 watts of power in each tone(or sideband) my average would be
>4 watts and my PEP would be 8 watts.

Whoa again! I thought your example was a SSB signal?

>Suppose you now have a third tone of 8 watts. The average now becomes 12
>watts and the PEP will come to 24 watts. You might recognize this as a
>practical example of an AM signal.
>
>As you add more tones, the peak to average ratios increase rapidly and the
>PEP varies as the square of the number of tones.

I think you are taking this way too deep. I'll say this as simply as I
can: PEP is used to measure the power of an envelope. PEP is useless
to measure AM power because AM is composed of both a modulation
envelope and a carrier. PEP is used for SSB power because SSB is a
modulation envelope and nothing else.

>Taken a bit further, consider a SSB voice signal alone or in a double
>sideband AM signal. Although it appears as only one carrier in single tone
>test, it now represents a group of individual carriers due to the myriad
>simultaneous audio frequencies which make up the one sideband.

...huh? A sideband is not a carrier in any sense of the word. You can
have a 'sideband' and you can have a 'carrier', and never the twain
shall meet.

>The same math constraints apply to this voice sideband as in the single tone
>tests of before with an exception. The individual simultaneous voice
>frequencies are rarely the same level as each other but they will still add
>in the same way as individual tones would, albeit, the resulting voltages
>will be unpredictable and varied considerably.

True, except SSB and AM do -not- follow the same constraints. An AM
sideband is limited to 1/4 the carrier power, but SSB is limited only
by the RF power available. That's a significant difference.

>It would be impossible for a commonly available RMS type of wattmeter to
>deal with this waveform correctly. A peak reader is needed on SSB as well as

>AM for the same reasons.

A "peak reader" is not needed for AM -because of- the constraints of
AM. And "peak reader" will tell you nothing about your carrier power
or modulation level, both of which are far more important than PEP
when measuring AM power. Regardless, the PEP cannot exceed 4x carrier
power, so if you know the carrier power and modulation index, there is
no need to measure PEP. That is the point I am trying to make.

>----------------------------
>Something about wattmeters may be in order. A power meter can provide
>inaccurate readings of average power in a couple ways. The first is when
>something other than a true RMS meter is used. Thermocouples, thermistors

>
>The second way is when the signal doesn't look like a two tone test. Any
>frequency components besides the two tones (including IMD) add to the
>average power linearly. If the 3rd, 5th, and 7th products are high(-15dbc)
>you might see an error of about 10% higher than the main tones on a average
>reading meter.

Are you talking AM or SSB? An averaging RMS meter doesn't move under
modulation when measuring AM. As far as SSB signals are concerned: a
true PEP meter will read power on the peak of the envelope and hold
that peak until reset; and an averaging RMS meter will not show true
PEP, but instead will show PEP averaged over the time constant of the
averaging circuit. Audio harmonics will be read by any meter if they
get through the LP filter and make it into the RF.

>Peak type meters are extremely sensitive to harmonics. The power will add
>linearly to the measurement and cause errors. When using one of these meters
>it's best to put a harmonic filter ahead of it.

If a meter is sensitive to harmonics, it's a good meter -- keep it!
Any error due to harmonics is not due to the sensitivity of the meter,
it's due to a crappy radio.

>----------------------------
>I gave you an example of a multi-carrier linear amplifier in a previous
>reply.

You didn't specify "linear" in your previous post.

>You said the cause of the increased output was due to mixing products and
>that the individual carriers were being "modulated". The carriers are not
>modulated and exit the amp intact but at a higher power. They do not have
>any remnants of the other tones in terms of modulation. The carriers are not

>outputs are simply the same carriers just at larger rms amplitudes and much
>higher PEP. I am leaving out the usual IMD products that all amplifiers
>produce because in this amp, the design minimizes these to levels well below

>an interfering value for our purposes.

As I said, you didn't specify a 'linear' amplifier.

>For the reasons I stated earlier about the way tones add is how and why the
>output measured much higher in PEP than RMS
>
>Examples of this amplifier are those used in Cellular / PCS base stations
>and CATV line amps. No form of mixing can be allowed and IMD is designed to
>be at an extremely low level.

Because of linear mixing, each signal is going to be shifted away from
ground potential according to the amplitudes of the other two signals.
Since ground potential is the baseline for measuring power, your point
is well taken: I agree the PEP measurement will be heavily skewed.
Now, since your example applies to both AM and SSB, what does it have
to do with why PEP can or cannot be used to measure AM power?

>------------------------------
>Now I can say again, that PEP reading meters are viable on AM and SSB just
>as RMS meters are...as long as you understand the limitations of each.

AM power measured with PEP boils down to this:

1. It is not proportional to true power;
2. It is not proportional to modulation;
3. It does not indicate any variation of carrier power;

PEP tells absolutely nothing about an AM signal. However, it can make
one useful measurement -- when the needle stops cold due to
overmodulation, you have found the upper rail of your final.

Ok, I'll be more specific. Here are the questions you ignored. They
are simple yes/no questions, but feel free to elaborate on them as you
see fit:

The Constitution says that "Congress shall make no law respecting an
establishment of religion, or prohibiting the free exercise thereof".

1. Does that mean the government is supposed to follow the Ten
Commandments?

2. Does that mean Muslims, Jews, Hindus, Buddists and athiests should
be outlawed?

It was my understanding that a law passed sometime over the last year
or so allowed local authorities to enforce FCC regulations...

Source record: 124709

>>From: aa2qa@frontiernet.net (Jim Hampton)
True enough. The real problem is in the vendors. In the newspaper inserts this morning Staples has advertised some 'walkie-talkies'. The $29.95 features a roger beep and up to a two mile range. The $39.95 offers little else and has 'up to a 2 mile range'. The third is $79.95. Wow. $79.95 seems a bit pricey - oh - 'UP TO A FIVE MILE RANGE'. Huh? If you carefully read the ad, this is a gmrs radio - 14 of the channels cover FRS and the rest are gmrs. I'd likely opt for that five mile range and guess what? You are supposed to be licensed for that radio. Nowhere in the ad does it mention this.<<

No fine print with a tiny asterisk in the ad?

>What happens is that a lot of folks will buy that radio for its' range and sooner or later some business is going to have a couple of hunters on its' frequency.<<

One would think a disclaimer be mandatory in the ad, eh?

>Some people (like Aaron) have flamed the newsgroup a lot, others have kept quiet. Myself, I feel the problem is in educating businesses and folks who use the radios. Unfortunately, businesses are only interested in making money.<<

And judging by the feds past actions, it must be their bottom line as well...most of the fines they levy are collected, no? You can't collect off the poor who have nothing to take, eh?

>To some, that means trying to get repeat business. Then there are the EEI folks.
In any event, businesses have virtually no interest in telling the whole story. I'm sure Staples would rather sell a bunch of those $79.95 radios than the $29.95 units.<<

Assuming the profit margin larger on the higher priced units, I would tend to agree.

>Calling CBers stupid doesn't help a bit. Some are very knowlegeable technically, most are simply communicators. There are reasons for the rules; like the highways, if there are no rules, no one will find much use of the airways. We like to watch television. We enjoy radio. We enjoy our cellphones. All are regulated to try and allow the maximum use of all our gadgets by everyone.
Suggestions, anyone?
Jim <<

The DX isn't as strong as it was, several here have said how quiet the channels are as opposed to the "DX-gone-wild" we have been toying with the last few years. Everyone didn't just shut off their linears, yet there is very little noise.
The only logical conlusion is to start seeking out the bastards that buy these GMRS radios that are disguised as FRS radios as part of a larger conspiracy designed to poach, squat, steal, loot and take all frequencies by non-licensed individual hobbyists. Perhaps we could post satellite pics of where they live or maybe ry to find where they work. These evil, wicked perps should serve nicely for those vigilante radio monitors to take aim at now that the cb amp monsters are slowly fading into oblivion <g>.

> Just curious, what do you think of the Turner 22D?

No experience so no feel. My problem with the D104 was that it picked up the dog farting (dachshunds do that a lot) and was clunky and to my mind at least, ugly. As a mike it was pretty generic. My all time favorite was the Shure 554 which is no longer in production. And I put a cap in series to obtain the rising characteristic which was already a feature of the mike.

The point of all that is that is is a 50s mike pure and simple where the mike input was a 12AX7 and outputs were high. The pickups in record players of the vintage would put out 3 volts easy. Remember your kiddie player was a cartridge, a 35W4 rectifier, and the honorable 50EH5 pumping about four watts to drive mommie to distraction; no preamp whatsoever.

I would suspect the 22D having been around a while would submit to somewhat the same techniques. But here again, part of the picture is the suitability of the load presented to it.

I'm not talking about the "worlds" within the newsgroup. I'm talking about the 2 worlds of CB radio. Maybe the base station and/or freeband world is a different world than the 40 channel world; but I'm talking about what CB is used for. What do you mean that "truckers don't usually have the time." Time for what? IF you mean anything--I KNOW what you mean!
Dave!!!!!!!!!!!!!!!!!!!!!!!!

I once had a 22X ("x" for xtal) and the 22D is the dynamic version of same. Nice looking mike, very classic, hi-z, "communications fidelity" range, maybe 500-3000 cps.

All well and good, but the truckers seem to like it above 28. They like it
because there
is none of the howl and squeal found down on the regular 40. And that is
because it is
an area allocated to CW and other non-voice modes. It is, indeed, a
problem, and one
that has attracted attention in the international arena--not just in the
USA. I don't get involved in the "freebanding" thing--I leave that to the
anti's. But I DO monitor the lower
part of 10 meters and will not hesitate to see that any person I catch
operating there without license gets whats coming.

> establishment of religion, or prohibiting the free exercise thereof".
>
> 1. Does that mean the government is supposed to follow the Ten
> Commandments?

THIS country WAS a Christian Republic. Pursuant to Romans 13 and
others scriptures, God established GOOD government to (a) Punish the guilty
of violators of HIS laws (10 Commandments) and praise the good. Since the
religion of the nation is changing, WHICH law system is it going to, OR
which one is better than the 10 Commandments of God?! The Amendment means
NO STATE CHURCH. No denomination over another (like Europe). BUT we have a
State Church now! Brought in in the 60's now called "Tax Exempt Status."
Also Churches became coporations too, since the early 1900's to 1950's.

>
> 2. Does that mean Muslims, Jews, Hindus, Buddists and athiests should
> be outlawed?

Ther Founding Fathers set US up as a Christian Republic. True
Jews had NO problem with that, since it was based on MOSES 10 Commandments.
I have read documents saying that ATHEISTS and deists didn't have any
problem with that either, because it brought THEM benefits! When a FALSE
Satanic system (like the chicken killers of S. Fla) are protected by the
Supreme Court, and the Federal Govt. STEALS a Baptist Church because they
don't want to be a STATE Church any more (see
www.indianapolisbaptisttemple.com), we got some SERIOUS problems in this
country when reprobate Anti-Christs sit on the Supreme Court (since '62 or
before)! I didn't "ignore" any questions before. I may of not seen them.
THE question is "Should MUSLIMS be outlawed because of the current WAR
(Jee-Had) they have against US?" They outlaw US (Christians) in their
countries! Dem is murderers!
Dave!!!!!!!!!!!!!!!!!!

LOL, so if I took a legal 4 watt CB (feeding a properly fed and
grounded antenna system) and lined up five or six brands of TV sets
(using rabbit ears) in front of it, you're telling me that most all
the TV sets would definitely be interfered with?

Got any data to back that up? Lab tests maybe?

> Randy
>

Now, in another thread, you stated that "if one is caught in *your* garden, he'll have more problems than just buying ladybugs"--or something to that effect. Yet, if hams
discover unlicensed persons operating on 10 meters, and take steps to rid the band of such illegal operators, they are now "crybabies". IMHO, that is a double standard.

In spite of some opinions, the two scenarios are similar. If you, on the one hand, discover a trespasser in your garden stealing your vegetables, you are now indignant and
ready to do some harm to the intruder. Now, the hams, in an effort to preserve the
turf (28 MHZ) they "lease", by virtue of license, observe, "catch", and report those tres-
passers, become "crybabies". While a "garden" is a tangible object and its owner has
every right to defend it from intruders, intangibles such as frequencies can evoke feelings
of ownership and defensive reactions just as well. Why should one group of people who
have chosen to earn the use of certain bands of frequencies by following the requirements
of the government have to put up with intrusion and stealing of frequencies by those who
regard such rules with disdain, and, yes, ignorance (in some cases) of the reasons why
the rules are there to start with? Just as you, if you so choose, can seek legal remedies for the trespassers in your garden, the hams have the same right to defend 10 meters from another form of trespassing. Regardless of what unlicensed intruders think of me,
I WILL monitor, observe, DF, and report those who intrude into my "garden" of frequencies without permission (license).

Likewise, if those who occupy the so-called "freeband" want something done about people squatting in *their* garden, that is their responsibility, not mine. If they don't
care if people occupy their turf, it doesn't mean that I have to acquiesce

to the same people in my yard.

4867. Voobner's Wattage Chart is Great!!

Newsgroup: rec.radio.cb
Date: 2002-05-20 03:05:42 UTC
From: Killer Klown <dlp33@insightbb.com>
Message-ID: <3ce86802$1_4@news.uncensored-news.com>
Source record: 124733

Voobner's wattage chart is a great way to stay legal! If 20 "Bird Watts" (rms) extrapolates to 30k in KCT watts, that's a multiplication factor of 1,500! Therefore, a straight-out-of-the-box, stock unit running 4 "Bird Watts" (rms) is actually putting out 6kw in KCT watts! Therefore, one would have to run in excess of 6kw in KCT watts before they violated the legal RMS limit! With a measuring system like that, WHO NEEDS LINEARS?

Source record: 124730

Most (if not all) class A audio preamps in CBs are rated at 2000 ohms. Of course
the mic was often rated at 600 ohms by the manufacturer. Think about it, pulling a D104 down to 600 ohms would break the camel's back. You can greatly increase the impedance of a silicon NPN (as a class A device) by reducing the base current.

I'll take your word, Dave that they produce sufficient audio, we won't talk about frequency distortion, at 600 or 2k ohms. It is easier to run the mike into a JFET with a proper sized resistor (150k or so) and use a pot to set the level and let it blast into the 2k input. And you do not have a problem stuffing the stock mike back into the mike jack either.

In any case, I think I may have stumbled upon a great idea. Just
rescale the watt meter faces of wattmeters to read KEYCLOWN WATTS.
Then the keyclowns will be happy because they're seeing big numbers
when they're actually only running 4 watts.

> Station CB radio imputs--1970's units?!
> Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
Because most D104's had a 2 stage preamp circuit that easily handles very
low impedance radios. Those speaking of the high impedance of the mics were
speaking of the cartridge directly connected to the rig. Only the older or
modified mics came without a preamp.

When? And what are your references? Have you ever heard of the
Conventicle Act? Or the Test Act? These were just a couple of the
reasons for the 1st Amendment. Did you ever read about the 1784 case
in Virginia where Madison and Jefferson established that enforcing
religion through the government is "against natural right"? That's
another reason why the 1st Amendment was written, Dave. The
Constitution protects the public from people like you who would send
us back into the dark ages, when people were persecuted by their
governments for their religious beliefs. It still happens, but not in
the US, and that's because of the Constitution. And you better thank
God for the Constitution, because without it you might have grown up
worshiping a large rock at gunpoint.

> Pursuant to Romans 13 and
>others scriptures, God established GOOD government to (a) Punish the guilty
>of violators of HIS laws (10 Commandments)

The Ten Commandments establishes no punishments. And the New Testament
explicitly states that judgment is reserved for God and not men. Are
you God to sit there and judge the rest of us?

> and praise the good. Since the
>religion of the nation is changing, WHICH law system is it going to, OR
>which one is better than the 10 Commandments of God?! The Amendment means
>NO STATE CHURCH. No denomination over another (like Europe). BUT we have a
>State Church now! Brought in in the 60's now called "Tax Exempt Status."
>Also Churches became coporations too, since the early 1900's to 1950's.

I didn't ask you if the government has faults. That we all know to be
true. My question was if the government is supposed to follow the Ten
Commandments. The answer is NO.

>>
>> 2. Does that mean Muslims, Jews, Hindus, Buddists and athiests should
>> be outlawed?
>
> Ther Founding Fathers set US up as a Christian Republic. True
>Jews had NO problem with that, since it was based on MOSES 10 Commandments.

The Jews have always had a problem with Chritianity, not just for the
obvious reasons, but also because they don't think Constatine had the
divine authority to change the day of the Sabbath. If you are going to
follow the Ten Commandments, you better think about changing it back
to Saturday.

>I have read documents saying that ATHEISTS and deists didn't have any
>problem with that either, because it brought THEM benefits!

Really? What documents are those?

> When a FALSE
>Satanic system (like the chicken killers of S. Fla) are protected by the
>Supreme Court, and the Federal Govt. STEALS a Baptist Church because they
>don't want to be a STATE Church any more (see
>www.indianapolisbaptisttemple.com), we got some SERIOUS problems in this
>country when reprobate Anti-Christs sit on the Supreme Court (since '62 or
>before)!

Again, I didn't ask if the government was without its faults.

> I didn't "ignore" any questions before. I may of not seen them.
>THE question is "Should MUSLIMS be outlawed because of the current WAR
>(Jee-Had) they have against US?" They outlaw US (Christians) in their
>countries! Dem is murderers!
>Dave!!!!!!!!!!!!!!!!!!

Wonderful answer, Dave! I'm sure you have illuminated everyone here as
to your racial and ethnic prejudices. Keep the ignorance flowing --
it's more than entertainment, it's educational! Because now we can all
see why the Constitution was written and can appreciate it just a
little bit more.

4878. Twelve Anti-keyclowns were about to be ordained

Newsgroup: rec.radio.cb
Date: 2002-05-20 06:46:36 UTC
From: bigjohnsonradios@aol.com
Message-ID: <20020520024636.09279.00000632@mb-mq.aol.com>
Source record: 124743

Twelve Anti-keyclowns were about to be ordained. The final test was for them to line up
in a straight row, totally nude, while a
sexy and beautiful big breasted nude model danced before them.
>
Each Anti-keyclown had a small bell attached to his penis and they were told that
anyone whose bell rang when she danced in front
of them would not be ordained because he had not reached a state of spiritual purity.
>
The beautiful model danced before the first Anti-keyclown (Aaron H. Voobner), with no
reaction. She proceeded down the line with the same response
from all the Anti-keyclowns until she got to Train.
>
As she danced, his bell began to ring so loudly that it flew off and fell clattering to the
ground. Embarrassed, he
took a few steps forward and bent over to pick up the bell.
>
And then, all the other bells started to ring

> -Dave Hall

Wow! A blast from the past. Still true though.

Here's another:

Many people think it's cool to defy the law because they feel that it's their way to "get back" at "the man" or what they feel is an overly oppresive government (If these same people only knew what it was like in many other countries, they'd have a bit more respect for ours).

What these same people don't realize is that while they may be shaking their radio fists in the face of the government, and making a mockery of the law, they are also shaking them in the faces of other people, and disrupting their rights and freedoms.
It's really not so much about following the letter of the law as it is practicing common courtesy, consideration, and respect for fellow citizens. The airwaves are for everyone to share, and if some of us run illegally, it is taking away from the enjoyment of others, including people who are not even radio operators who are are just attempting to enjoy their consumer electronic devices. Those people who "don't care" about the rights of other people, should not be surprised if if these same "other people" pass laws that make radio operations more difficult, or take them to court for
disturbing the peace etc.

High powered CB, it's not just illegal, it's also rude.

> neighbors stuff for a 1/4 mile.

So what's your point? If "legal" stuff can interfere, then what happens
when you amplify it 1000 times?

Many cases of interference resulting from legal radios can be cured by
such things as moving/changing antennas, or adding ferrite chokes on AC
lines and speaker wires.
When you are running hundreds or more watts, it becomes increasingly
difficult to remedy the situation, especially if the amplifier is
inherently "dirty" by design.

> to Saturday.

Among the oldest human institutions still working is the seven-day week going back to Sumer. We still name the days in the Sumerian pattern substituting later gods but keeping the spirit of the occasion. As it happens Saturday (Saturn's Day in our parlance) was a rest day because the local Sumarian god was something of a trickster and a flake so nothing you did worked anyway so why try. The rabbis made a whole lot more of it later including the preface to the Torah better known as the first 11 chapters of Genesis. Shabat may or may not have been ordained by God but he lifted an existing template which is pretty good human engineering at the very least.

Sunday as the resurrection day was the result of a mistake. The sequence of Passover and Easter, in the Western churches at least, was the same as it was this year so we got to see how it really happened. Good Friday was Wednesday with Passover starting at sundown so the three days were in fact Thursday, Friday, and Saturday. They got the concept but not the dates right at Nicea. Two Shabats in the same week just blew the minds of the early church fathers and there were not a lot of rabbis around to ask so they blew it. You do have to admit the story makes a lot more sense that way.

To whatever extent it makes any sense to begin with. A three-hour Crucifixion even amazed Pilate and the timing prevented any observant Jew from inspecting the tomb in daylite until sundown on Saturday. Burying the alive is not a cultural trait anywhere on this planet. At the very least, those suspecting fraud have a lot of ammunition.

And speaking of Constantine, I always wondered what the first service after Christianity was required must have looked like. I picture Father Emil who was used to doing his thing in a cave with 50 people looking out over an acre or two of bodies coming to follow the law. The after-service conversation must have been priceless. "Got an Earth Mother, padre? Always liked the Earth Mother."

First you get down on your knees, fiddle with your rosaries, bow your head in great respect, and genuflect, genuflect, genuflect.

It was never my intention to turn this into a code/no-code debate (God knows the ham groups drone on and on about it incessently), I was merely drawing a parallel between the enevitable justification of "older" modes to a younger audience, that is born and bread on new technologies, and doesn't appreciate the "magic" or "romance" of the older modes

> we have the answer, what's your question.

Well, commercial techniques are what's being adopted on the amateur and other hobby bands since there doesn't seem to be much experimenting in new technology going on.
Part of the problem is that in order to use modern digital techniques requires the use of complex circuits that either require VLSI hardware or complicated software. These are skills not normally possessed by the typical ham (or Cber).
While the average ham doesn't need the reliability of the commercial sector, much of the same techniques are used (Albeit somewhat watered down). As for the frustrated OT's, much of their frustration at "digifreaks", may be just that these digifreaks are talking above their heads. Much of these new technologies are a radical departure from "the old days" of analog radio. In the last 50 years we went from mostly tubes to integrated solid state, but the signal paths and techniques remained the same, so it was only small steps and people could usually adapt to it without much grief. But the jump to digital, for someone that's lived and breathed analog for the last 50 years, is going to be tough. Old brain cells do not work as well as young ones, and the real

fear the the OT's have is being left out in the cold and lacking understanding and being made to feel stupid. I know because I'm experiencing it myself to some degree. Which is why I am doing as much as I can to stay on top of what's going on, so as to avoid a major case of "future shock".

Of course. EME presents special conditions and challenges. Wide bandwidth modes do not work and dopplar shift can kill standard digital modes.

> too bad but it is not an improvement on 1935 SSB. The advantage analog
> has is that the brain makes better software than digital designers do so
> it can be understood by humans well after the digital screen has turned
> blue.

This is all true. The brain does decode better than a computer does, simple because the brain will "guess" the likely answer, where a computer does not have that ability.

Digital can sound better than analog, but in order to do that, it needs more bandwidth. Chop the bandwidth down by lowering the sample rate, and the encoding speed, and you end up sounding like you're talking underwater (Which is what a lot of digital cellphones sound like despite ads to the contrary).
Analog, as of now, can be more usable in high noise conditions thanks to the brain's ability to "fill in the gaps". But the future will will most likely solve most of the remaining problems in digital voice modes, and what remaining advantages that analog has will be eliminated. At that point, there will be little justification (besides the nostalgic) for keeping analog.

> Do the world a favor, take the blessed code test.

Ironic that one would have to take a test of an even more antiquated mode when the digital revolutions will sweep the need for such things away.

For the record, I took my code test 21 years ago, and haven't touched it since.

And what would you call it? The "geriatric band" ? ;) No need, there
will be plenty of those still arguing the merits of CW on the ham bands
when the rest of the world will have wrist or pocket communicators, that
will allow them instant contact with any other similarly equipped
person, anywhere in the world.

Like you said, it's hard to predict the future. But society seems to
swarm around the latest technologies. Only those that defy the trends
will stick to the old stuff, when the new becomes predominate and cheap.

Whatever works. There are many people diligently working to develop
digital modulation schemes that work under special conditions. I won't
even try to predict what we will be doing in the next 20 years.

4891. Texas Star Question (For Gary &/or Dick)

Newsgroup: rec.radio.cb
Date: 2002-05-20 14:12:00 UTC
From: wa2si@arrl.net
Message-ID: <b7d1465c.0205200612.65fe1d86@posting.google.com>
Source record: 124756

Hi Gary,

Does that apply to Texas Star amps? I know at least three licensed amateurs who use these on 10-meters in their mobiles. Now, the trick is that these are sold as 5 watt CW transmitters, but are user modifiable to convert for use as an amp. We all know that's a bunch of bunk, but it does appear to meet the technical legal requirements set forth by the FCC. I believe 25 watts P.E.P. gets you up to approx. 350 watts out. (TS350HDV) Could a licensed Tech "+" or above get into trouble for using one of these on 10-meters? This question is open to Dick too. One of the locals runs the output through a Bencher LPF attached to the vehicle body and hasn't gotten any TVI/RFI complaints. (Yet, that is.) Kinda curious. Thanks for your response.

Yes indeed there are two worlds of CB radio, maybe even 3, those who use CB for communication during their working hours i.e. truck drivers, those who just love to ragchew with their friends in the evening on the local channel (here it is ch13 and ch 8), and those who love to chase 11m DX.

I fall ointo the ragchew group. I enjoy meeting with my friends on the radio and just BSing about stuff until the early AM. I have in the past occasionally hit some DX but not intentionally. And when I drove truck I used CB in that manner as well.

Best perfoming rig I ever had mobile was an old SBE 40ch/SSB mobile into a 102" whip mounted into the middle of the trunk lid of my car, and when the old SBE went kaput I installed an older Cobra 148GTL when they were still made decently. Best performing base, Browning Golden Eagle into a Moonraker IV on top of an old well tower. Second best fave base is the one I currently have an older President Washington.

Bert, we could try firing up the search engines. I do believe, however, that the FCC mandates that linear amps not even be sold capable of use between 25 or so MHz and 35 or so MHz. Upon proof of a license, the manufacturer will show you what to do to enable 10 and 12 meter operation. Also, I believe that all amps capable of operation below 144 MHz (not sure about 6, again, these are rules that I would worry about if I were operating below 440 MHz) must require 50 watts of drive. How the heck this is enforceable beats the heck out of me. If the darn thing is linear, it certainly has to amplify all signals. Ok, so that 1.5 KW linear won't develope 1.5 KW when fed with the rat shack 25 watt pep 10 meter rig; it surely must develop a few hundred watts at a minimum. Oh, I also believe there is a maximum gain in dB on amps used below 144 MHz. We know what the intent is; unfortunately, it has only served to make life more difficult for properly licensed folks.

73 from Rochester, NY

I live in a neighborhood where it is not possible for me to run a radio in the house other than into a dummy load. This was just a quick test to see if the old Elkin was still in good running order prior to putting it up for sale. I don't really have a dummyload capable of taking the Heathkit or the Drake amps. The Cantenna this was dumped into is only rated at 1k as it is.

An Amateur is not going to get into trouble for owning anything. I could own Radio Moscow and if I could figure out how to hold it to 1500 PEP after finding a new place to live (there sure wouldn't be a place left to bunk with that much hardware) no one would complain. Give your friend a gold star for the LPF first because it does keep the crap level down and second because it keeps FM, TV, etc. out of the amp so it is not a moving broadband mixer; the old Motorola Micors were famous for that.

I too have heard that the Texas Stars are relatively clean and by offering the chirpy CW board they do seem to have stayed out of court. Pretty lame but it does appear to be effective.

I would also suspect that the LPF does a bit of decoupling along the way and that his rig runs gangbusterly on 10 meters.

Long and short, ownership and use for an Amateur in Amateur freqs is simply not an issue. What spews forth is very much his responsibility.

4904. Re: Local enforcement of FCC rules

Newsgroup: rec.radio.cb
Date: 2002-05-20 18:17:35 UTC
From: 'Doc <w5lz@icok.net>
Message-ID: <3CE93DB4.F474B1CC@icok.net>
Source record: 124769

vhfradiobuff,
Your talking about PL-106-251, which allows local governments to pass laws about RFI for unlicensed services, only. If you have to have a license for what ever 'type' radio you operate, this law does NOT apply to you. For instance, this law applies to CB, FRS, and Part-19 devices. It does not apply to amaterur, or GMRS radio systems. The hams and other licensed systems don't get a 'free ride', though, it just means that they are under federal jurisdiction rather than local.
'Doc

PL-97-259 = federal preemption of RFI matters
PL-106-251 = local enforcement of RFI matter for unlicensed transmitters.

Not that I'm aware of, however at one point you could
get a car stereo, that had citizens band built in...
but that was at the height of the CB craze many years
ago. Don't think they sold all that well though.

4911. Re: "CB WORLD" webzine features rig tuned to ham band?

Newsgroup: rec.radio.cb
Date: 2002-05-20 18:47:42 UTC
From: twistedhed@webtv.net
Message-ID: <27141-3CE944CE-484@storefull-2313.public.lawson.webtv.net>
Source record: 124776

>My beef here is not really focused on this particular radio (although why illegal use of amateur equipment should be a suitable subject for a CB magazine eludes me), it's about the sudden popularity of "10 meter radios" with CBers.<<

Sudden? You are relatively new to cb.

>There is a lot of misrepresentation and confusion (some of it intentional) among CBers as to what a "10 meter radio" actually is.<<

Maybe there is, but it doesn't exist here..just more of your BS saying something exists or takes place here that simply does not.

> Most of this confusion is propagated by black market dealers of non-type accepted equipment designed to be used on 11 meters.<<

No one has demonstrated confusion on this issue anywhere among these pages..again, merely you claiming something that doesn't take place.....after all, it's only a matter of time before those FRS/GMRS users start terrorizing those law-abiding, tax-paying citizen's that may use the same freqs, eh?

> I think it's irresponsible for a CB magazine (which should have the best interests of the service at heart) to give a wink and a nod to the use of non-type accepted equipment on CB by popularizing the term "10/11 meter".<<

And you being permitted to express your thoughts here in public falls under the same great principles and laws that allow this magazine you speak of
to express their opinions and be paid for it.

>Imagine the impression the uninformed buyer<<

That is their mistake. "Uninformed buyer"
is blissful ignorance. When one makes a purchase, one should educatethemselves before, not after the purchase. Trying to educate that lost segment of society that practices the latter is a noble and valiant effort, but realistically stupid.

> gets when he's being marketed a "10 meter radio" (wink wink) that is "illegal to use on cb" (wink wink) that covers "25 through 29 mhz" (wink wink). The insinuation is that it's OK to break FCC rules.<<

Only you could infer such a thing when it plainly reads in English and usually Espanol as well,
"This device illegal to operate in the United States unless an amateur license is held by the user."

Again, that insinuation doesn't exist anywhere except in your failed feeble attempts at delivering misguided and deliberate disinformation.

>But the buyer is left to himself to decide which rules he should break.<<

Imagine that..having freedom of choice in how to conduct oneself...(chuckle).

>Just using the radio on CB is a violation (and the dealer is encouraging him to feel that he won't get caught), <<

Only you could infer a dealer is encouraging such practices by merely selling an authentic ten meter radio.

>so why shouldn't he use the radio above 28 mhz too?
-A<<

Why shouldn't he, Indeed. As the enclosed literature and sticker alludes, one must have an amateur license to use such a radio you speak of.

>What if your customer's wants are illegal?<<

Well, only you can mindread Aaron, so let us know how it goes when you present that casein a court of law and tell the judge, "But you honor, I just KNOW he wanted that widget for subversive and illegal means."

> What if your customers wants include 'quiet channels' (i.e. 28 mhz and above)?<<

Resorting to the "What-if" scenario signals your defeat of any point you may have had. You have once again reduced your self to flames and insults and your irrational anger mode is in full-swing preventing any communication skill you may retain from being displayed.

> You're saying that profit is ALL and manufacturers have no responsibilities to society or lawfulness, Bert. A very ugly stance to take.<<

More flawed interpretations.

>>Remember the Pop'Comm principle? <<

>No, I don't. <<

>There is a lot of misrepresentation and confusion (some of it intentional) among CBers as to what a "10 meter radio" actually is. Most of this confusion is propagated by black market dealers of non-type accepted equipment designed to be used on 11 meters. I think it's irresponsible for a CB magazine (which should have the best interests of the service at heart) to give a wink and a nod to the use of non-type accepted equipment on CB by popularizing the term "10/11 meter". <<

>>I don't buy the "ignorance" plea, Aaron. If you're interested enough to buy a rig like the AR-3500, (Approx. $300.00 to $350.00 in 1989.) you should really have done your homework. So now we should limit the use of offensive terms as well, like "10/11-meter radio," despite their accuracy? What next, burn books on the subject? Those are out there too, you know? Too funny. <<

>I'm saying that CBers should take responsibility for their service. That includes "CB magazines", "CB clubs" and "CBers" in general, especially the ones that have "done their homework". A little peer pressure could drive the power junkies away.<<

Away from What? What part of the country are you now claiming to be in that there exist all these power junkies for one to hear?

> A little group effort at getting the word out could prevent truckers from operating on 10 meters.<<

Truckers, channel 6ers, DXers, you don;t like anything that has to do with cb..hehehh!

>But, no they won't do even that. CBers are totally unwilling to police themselves. <<

And what radio service do you suppose that was modeled on?

>So by default, they get put in a position of BEING policed. And then they have the gall to bitch about it.<<

Once again, for those of us who have joined the thread late, no one "bitches" about the law being applied to wayward cbers, just more BS you SAY takes place, but doesn't.

>Imagine the impression the uninformed buyer (snip)<<

No, the what-if'" scenarios are pathetic.

>gets when he's being marketed a "10 meter radio" (wink wink) that is "illegal to use on cb" (wink wink) that covers "25 through 29 mhz" (wink wink). <<

>>Trouble with your eye, Aaron. Let's protect the consumer from their own ignorance.<<

>I can see fine. What's wrong with protecting the customer?<<

Not a thing. Hmmm...customer is fine,,business is fine,,you have a problem..(Chuckle)!

>Who could possibly lose out with such a proposition? Are you concerned that customers will know too much? I hope you don't want to dismantle the Better Business Bureau.<<

No more than you want to now be Ralph Nader of the non-existent citizen's group that is bombed with cb outlaws each day.

>The
insinuation is that it's OK to break FCC rules...<<

Came from you exclusively.

> But the buyer is left to himself to decide which rules he should break. Just using the radio on CB is a violation (and the dealer is encouraging him to feel that he won't get caught), so why shouldn't he use the radio above 28 mhz too? <<

>>I might be inclined to agree wrt truckstop shops and their marketing of Galaxy and Connex AM/FM only radios. (Channel 19..."2 up?") Good night, Aaron.<<

Even that wouldn't make a piddle in the ocean, Bert.

>-A..<<

If it makes you feel better about yourself.

You will get a bit more output but the payoff comes in other ways. Your lites will quit blinking in unison with your voice for one thing. Within the amp, the lower current draw thru the power transformer will cut the 'copper loss' in the power supply and allow it to respond faster to peaks in demand from the amp and improve the linearity a bit, in fact quite a lot on sideband. Basically the same reason you don't use an old extension cord to run your amp or monster stereo in your car or, for that matter, run your linear off of the same outlet the freezer is on with a cheap extension cord.

All that really happens is that you switch the dual primaries from parallel to series and, minus large current variations and resulting losses, all else stays the same.

>From: gdavidov@yahoo.com (Gabriel)
Hello,
I'm new to CB radio and wanted to know if there are any CB radios which
pick up local AM/FM radio stations as well?
Thanks,
Gabriel <<

Several exist for several reasons. One here in Tampa Bay can be tuned in
somewhere between 25 and 26 MHZ due to it's roving remote broadcast
vehicles..will even send a confirmation card if you ask for it.
Of course, we are talking about certain type radios that are capable of
both the 10/11 meter bands, which many still consider under the realm of
cb simply because many utilize the frequencies below the 10 meter hammie
band (which begins at 28.000000 MHZ) but above the cb band (which begins
at 26.965000.
FWIW, the "band" directly below channel 1 is also used exclusively by
cbers and freebanders.

The NASA beep is a tone-encoded squelch, kind of useful if you are
orbiting every point on the planet and don't care to listen to every
intermod product, etc everywhere.

You shouldn't gain much in output. What happens is that the current draw
is cut in half. That means that the I^2*R losses are cut to 1/4.

The major difference is that the lights in your house will not flicker
when you talk.

Is that a sentence?

>(chuckle)..it doesn't work that way.

Correct, if you're talking about the rules of grammar.

>It costs nothing to email city officials to
>confirm what you lack....

No, you lack proof. You said Beloit Wisconsin did nothing with their
legislation. But you can't show that. Or won't show that.

>knowledge and truth of the matter. Whether you
>choose to believe me because of your intense personal
>issues is beside the point and matters not.

Twist, if you assert that Beloit Wisconsin did nothing with their
legislation you need to prove it. You just say "I don't need to prove
it, you prove it" LOL. That's like saying "the saucer men" talked
with you.

Twist, you are getting funnier as time goes on.

> but just in case.
>
> phil :)

Well, I haven't been "active" in many years. However, I did run my share
of rigs. Here's my 2 cents worth:

Good
----

* President - my personal favorites include the Grant, Jackson, Madison. I
REALLY love the President rigs. Don't know why, I just do.

* GE rigs built on the PLL-02A or 03A, a few others. Superbase ruled it.

* Cobra rigs including the XLR, LTD, GTL, etc - EXCEPT the "PLUS" series

* Galaxy rigs like the Jupiter, Pluto, original Saturn, DX88 and 99 (and
the Mirage versions of these two as well) The 77 was a bad 148GTL-DX clone

* Uniden "President" models (Washington, Madison [drool]) and the PRO
500/510/520/530, HR-2510, 2600, Lincoln

* Ranger 2950/2970/Sommerkamp TS2000DX (had one of these)

Fair
---

* Old Radio Shack rigs - pre 1985 or so

* Sears, JCPenny, SBE, and other "classics"

* Early SuperStar 360FM, 3900, 120, 121. I guess you can include the President
clones - the "JA", "GR", etc. 360FM was my first export rig. Loved it.
Love my Grant DX more.

* Midland early 90's era rigs - small, < $100, but could really talk, esp with a
D104-M6B or Road Devil.

Poor
---

* Later SuperStar 3900 et al - off freq, no rx, just poor QC

* Cobra Plus series - AWFUL lot. Bad boards, etc.

* Cobra "mini" electronic tuned rigs - pointless, actually. These were OEM's that were just awful

* GE "Electronic Tuned" (post BDC era PLL's)

* Kraco

* Low end Galaxy - like the 77

* Uniden 66 - poor QC led to a LOT of boards with cold solder joints and other heat related problems. I fixed dozens. Some more than once.

* Connex - again, poor QC, even for an export

Hi all,

I currently have a (under 2-Years old) Uniden PC122XL SSB transceiver with an Astatic 575-M6 Mic... Anyways, I was wondering if it is normal for the radio to/when transmitting (recently), the signal level to drop anywhere's from 2 - 3 bars?

For what it is worth, SWR is/shows normal, & the mic's battery is new (replaced 3 weeks ago).

AFAIK viable SSB units are as follows:

uniden: GRANT
cherokee: NIGHTRIDER 150
president: JACKSON, GEORGE, LINCOLN
galaxy: DX959, DX949
midland: 79-290
ranger: TR296, TR696F, TR966, TR969

which is best?

thanks,
phil :)

I see that the resident AKC Troll Georgina is still trying to start an
argument just because I state a fact.
I never said that anyone could not post on here, we all know that you
make more useful posts in a week than he makes in a year.

I fail to see what problem he has with me stating what you yourself
have already made clear, or WTF it has to do with him anyway.
Especially when you consider that the AKCs are always biting at
your ankles for your posts on here.

Brainbuster.

"Export" (I bet that is what your uneducated mind meant) radios have nothing to do with AM or SSB. There are non-export radios that _are not_ straight AM, just as there are export radios that _are_ straight AM. Your delusional to think that buying a straight AM radio will mean that the purchaser is getting a non-export unit. They manufacture them both ways...

Your also wrong in the fact that straight AM radios are the best choice. Everyone knows that SSB radios are of better quality. They have to be.

>You're only half-way there Twist.<<

No, I'm all the way there and have been for some time. The mere contention that you seek something that does not exist...

>Is that a sentence?<<

It;s what's referred to as a "trail-off", hence the periods.....

(chuckle)..it doesn't work that way.

>Correct, if you're talking about the rules of grammar.<<

They were thrown out long ago when you cried my choice of vernacular was too complex.
Nevertheless, if it is proper schooling you seek, merely say so and I can enlighten your emptiness with more sense than you could ever possibly hope to absorb, but your past demonstrations of taking issue with my vernacular as too unabridged for your liking signals great difficulties ahead for you. This includes taking your learning curve into consideration.
It costs nothing to email city officials to confirm what you lack....fortitude, honesty, truth, and the grace to realize when you are wrong.

>No, you lack proof.<<

No, you do. I claimed towns that supported the legislation failed to follow suit with their own....you disagreed and asked for an example,,I gave you the definitive town instrumental in the legislation we speak of and now you ask for proof that legislation doesn't exist. LOL!
  I provided what you asked and you claiming otherwise carries the weight of everything else that emanates from your septic being.

>You said Beloit Wisconsin did nothing with their legislation. But you can't show that.<<

Since you aparently feel I am mistaken, this should be easy for you...show the legislation they enacted..that would be easy as pie to find if it was done....it wasn't.
  Whether you choose to believe me because of your intense personal issues is beside the point and matters not.

>Twist, if you assert that Beloit Wisconsin did nothing with their legislation you need to prove it.<<

I need to prove nothing. I don;t espouse falsehoods.

>That's like saying "the saucer men" talked with you.<<

No, it's like asking for something that doesn't exist and not comprehending a whole lot. LOL!

>Twist, you are getting funnier as time goes on. -Aaron-<<

Thanks, but the truth is what it is. If you could have proved me wrong you would have leaped like a frog. Educate yourself before you attempt to blow smoke about something you know nothing of. As always, you are welcome to try again when you have cleaned yourself and figured out just where you went wrong.

This is the reason I'm only questioning re. Texas Star. As purchased,
they are not sold as amplifiers. Out of the box, they are 5 watt CW
transmitters. As Dick said in another post, they're "chirpy," but
they're there. As for the Palomars, Galaxies, Davemades, X-Forces,
etc...definitely illegal "out the box."

> Upon proof of a license, the
> manufacturer will show you what to do to enable 10 and 12 meter
> operation.

Yup!

> Also, I believe that all amps capable of operation below
> 144 MHz (not sure about 6, again, these are rules that I would worry
> about if I were operating below 440 MHz) must require 50 watts of drive.

This could be the stickler. But again, an amateur may "homebrew" or
"modify" just about anything for his/her own personal use as long as
he/she doesn't violate any emission limits. The fact that Texas Star
amps are not sold as amps and must be user modified to convert it into
an amp may be their "sidestep."

> How the heck this is enforceable beats the heck out of me.

True.

They are working with the preamped version and it does indeed look as if they went to a JFET to drive lo-impedence radios. If you wanted to get cute you could put the biggest part of the input resistor on a pot and get the rising characteristic or flatten it out.

My real point in this is that radios differ so it is not the mike that determines audio quality more times than not.

I had the opportunity to see some true "boatanchors" this weekend and
it amazed me how BIG they really are. I'm sure they wouldn't compare
to Radio Moscow, but they're the first thing that came to mind.

> Give your friend a
> gold star for the LPF first because it does keep the crap level down and
> second because it keeps FM, TV, etc. out of the amp so it is not a moving

Seems to get the job done. He runs it at "half throttle" and slightly
inderdriven. The LPF is actually pop-riveted to a flage in his trunk
and all the connections are made with RG-213.

> I too have heard that the Texas Stars are relatively clean and by offering
> the chirpy CW board they do seem to have stayed out of court. Pretty lame
> but it does appear to be effective.

Whatever works, I guess. I wonder if anybody's ever used one for CW,
even if just for the heck of it?

> I would also suspect that the LPF does a bit of decoupling along the way
> and that his rig runs gangbusterly on 10 meters.

Pretty clean as far as I could tell. That's just by ear and listening
for bleedover on the adjacent frequencies. An oscilloscope may tell a
different story.

> Long and short, ownership and use for an Amateur in Amateur freqs is
> simply not an issue. What spews forth is very much his responsibility.

I suspected as much. Thanks.

> "underdriven?"

One hopes not in a 'linear' amplifier. As a practical matter there may be some degradation from what in the push-pull Class B modulator days was called 'cross-over distortion' which simply means that the tubes are not linear in the low areas above cut-off. You will notice in the specs that few if any tubes are run right at cut off ; there is some significant 'resting current' being drawn even with no signal to keep them in the linear range of the tube but one does not go apeshit with resting current and a lot of times it is set as low as reasonable and some distortion accepted. Where this is the case, a lower drive will be more distorted simply because it spends more time in the low end.

There are also some loading issues with the exciter which is being yanked pretty hard by the input of the tube into a varying load both resistively and with respect to input capacitance. So it is possible that the exciter becomes the source of distortion.

Like so many things in life, some days the Bulls win, some days the Bears win, but the Pigs always lose.

Oh I don't know Richard, if the following
is true, maybe the pig does win.....

GO Figure!!

In Lebanon, men are legally allowed to have sex with animals, but the animals must be female. Having sexual relations with a male animal is punishable by death. (Like THAT makes sense.)

In Bahrain, a male doctor may legally examine a woman's genitals, but is prohibited from looking directly at them during the examination. He may only see their reflection in a mirror. (Do they look different reversed?)

Muslims are banned from looking at the genitals of a corpse. This also applies to undertakers; the sex organs of the deceased must be covered with a brick or piece of wood at all times. (A brick??)

The penalty for masturbation in Indonesia is decapitation. (Much worse Than "going blind!")

There are men in Guam whose full-time job is to travel the countryside and deflower young virgins, who pay them for the privilege of having sex for the first time.... Reason: under Guam law, it is expressly forbidden for virgins to marry. (Let's just think for a minute; is there any job anywhere else in the world that even comes close to this?)

In Hong Kong, a betrayed wife is legally allowed to kill her adulterous husband, but may only do so with her bare hands. The husband's lover, on the other hand, may be killed in any manner desired. (Ah! Justice!)

Topless saleswomen are legal in Liverpool, England - but only in tropical fish stores. (But of course!)

In Cali, Colombia, a woman may only have sex with her husband, and the First time this happens, her mother must be in the room to witness the act. (Makes one shudder at the thought.)

In Santa Cruz, Bolivia, it is illegal for a man to have sex with a woman and her daughter at the same time. (I presume this was a big enough problem that they had to pass this law?)

In Maryland, it is illegal to sell condoms from vending machines with one exception: prophylactics may be dispensed from a vending machine only "in places where alcoholic beverages are sold for consumption on the premises." (Is this a great country or what? Not as great as Guam!)

A pig's orgasm lasts for 30 minutes. (In my next life I want to be a pig)

Humans and dolphins are the only species that have sex for pleasure. (Is that why Flipper was always smiling?)

The strongest muscle in the body is the tongue. (Hummm....I won't touch THAT one!)

The ant can lift 50 times its own weight, can pull 30 times its own weight and always falls over on its right side when intoxicated. (From drinking little bottles of...? -- did the government pay for this research??)

Some lions mate over 50 times a day. (In my next life I STILL want to be a pig ... quality over quantity)

After reading all these, all I can say is.......Damn those Pigs.

Those are commercial grade rigs in the UHF band, we use them here for disaster comms with our license. they are programable but if they are not set up to be field programable you'll need to get someone with the software to do it.

I do believe that they can be programmed to work with the new MURS radio frequencies.

Should probably mention that power transistors are extremely sloppy right
above cutoff and present an even flakier load to an exciter so with these
beasts, it probably doesn't do the picture a lot of good to operate them
with an inadequate driver. Goes back to the discussions here about the
Muntz amps (if you don't put in the part it can't go bad or cost money)

where operation below cutoff subjects a signal to a lot of distortion on the low end as first cutoff is reached from the bottom and then you get to wander in the wilderness of the low end of the transistor curve. Not pretty at all and even less so if you do not often kick it into the linear range. I begin to see where your thought comes from and in practice you are right.

Contact Dave, I bet he probably has one or knows where you can get one of
those cb/am/fm radios for mobile use.

Although I'd reccomend just leaving the radio in your vehicle, and
installing a seperate CB, you can get some decent rigs that don't take up
too much space.

I am well-known to have a big prejudice against Antique Modulation so I won't bore you with that. There are things in favor of SSB design even if used for Ancient Mary. The biggest item is the i.f. filter that is used on both transmit and receive; it keeps the adjacent channel crap to a roar (it can't filter if the neighbor sig is nine miles wide) and is generally better matched to the mixer keeping overload to a minimum. And the AGC curve is generally a lot faster as well as generally both carrier and audio-derived so the yo-yos with 'swang' get cut off at the knees and can play their 1925 technology games in relative peace, calmnity, and dignitude.

And as PH says, you do in the long run get what you pay for. The Aged Mumbling engineers have to meet a much lower price point than the Sideband jocks and the results show big time.

There's a website from a fellow at UC Davis dedicated to the Sillytronix
who shows up here periodically. See if you can find it with a search
engine because I am sure it will answer any problem you are having.

The only use for AM is as the lowest common denominater. Since many folks use AM only, you need AM to talk to them. The filters necessary to generate SSB will help you immensly in eliminating adjacent channel noise. Go figure. A five watt radio requires 2.5 watts to fully modulate it. That means that under 100% modulation, there exists a 5 watt useless carrier plus two 1.25 watt sidebands (one upper, one lower). Now considering that a stock SSB radio runs 12 watts pep - um, that tells me you've got nearly a 10 dB disadvantage with Ancient Modulation. Besides that, the AM only radios are playing a pricing game. Whose radio is the cheapest. Note that I did not say least expensive; I said CHEAPEST. You get what you pay for.

Which is precisely the point; that was what the D104 was designed to fit.
Would not be too surprised if the input resistor was a pot right into the
first audio stage. No longer the case.

You know what, you're right. I realize that it's politically incorrect to say this, but it is what it is. Although I was referring to the legal answer. Should probably mention that the Lincoln and the "2510" are pretty much one and the same. I still like the Grant on the legal 40 for the superior receive and the lack of the "NAL fear factor."

Actually, I was monitoring on both, the Grant and the Lincoln, the other evening and I'd have to say that the Grant was just a tad more pleasant to listen to. Both rigs equipped with the Channel Guard, but the Grant's output going to a ClearSpeech DSP external speaker. Talk about a low noise floor while still pulling those weak ones out of the weeds.

I have to "fess up" to liking that aspect of the D-104 in my early radio daze. I had a Silver Eagle that would literally pick up the sound of my mother washing the dishes downstairs if I kept my room door open. I'd keep it closed and keep the mic approx three-quarters of an arm's length away on the desk while I relaxed in my easy chair. (The textbook way NOT to speak into a mic...ah the foolishness of youth.)

I was only trying to point out that during two-tone testing, a True RMS meter is the prefered device used to set the individual rf test tone levels prior to combining. Once combined, the RMS meter can still measure the average power of the two tones but it takes a PEP meter (or a 'scope) to see the overall power, especially if there's more than two tones or voice.

The relationships are that a single rf tone is measured in RMS. The RMS reading of the combined rf tones is the sum of the tones' average power. The math also shows that in 2 tone tests, the PEP values of the combined tones is 2x the average(RMS) OR 4x the RMS value of either tone singularly. Lastly, in equal level multi-tone testing(more than 2) the PEP increases as the square of the number of tones.

All this talk about 2 tone and multi-tone testing is an attempt to detail the dramatic differences between the way your power formulas apply to simple, even level tones and the wild, unequal tones of a voice. Illustrating these marked differences should have shown that PEP is just as valid a measurement as RMS for AM.
---
sparky wrote:
> ...huh? A sideband is not a carrier in any sense of the word. You can
> have a 'sideband' and you can have a 'carrier', and never the twain
> shall meet.

reply:
In a previous post you specified that a single audio tone injected into a SSB radio will produce a sideband that is akin to a carrier. I agreed. An example would be a 19khz pilot carrier found in stereo broadcasts. This is a sideband and for all intents and purposes is a carrier. It can even be modulated.

I was hoping you would draw the parallel that a voice, which presents multi-frequency simultaneous tone voltages, is subject to the same phase additions as 2 tones in a test.
---

> power, so if you know the carrier power and modulation index, there is
> no need to measure PEP. That is the point I am trying to make.

reply:
I will agree that a peak reader is not necessary for a well adjusted, commercial AM broadcaster and that other metering can be more usefull. This doesn't mean the Peak reader is altogether useless in this case.

In the CB world your conventions are rarely observed. It is possible to make your PEP (considerably) greater than 4X the resting carrier especially when an amp is involved. The PEP meter will still show a unmodulated carrier power.
---
sparky wrote
> Now, since your example applies to both AM and SSB, what does it have
> to do with why PEP can or cannot be used to measure AM power?

reply
While PEP is not the only way to measure AM power it is a usefull reading. I'm not promoting either one as the defacto standard for AM. I'm simply condradicting your ascertion that a peak reader cannot be used at all.
---
sparky wrote
> AM power measured with PEP boils down to this:
>
> 1. It is not proportional to true power;
> 2. It is not proportional to modulation;
> 3. It does not indicate any variation of carrier power;

I say a good PEP meter is more representative of the total amount of rf going up the line because it takes into account the instantaneous phases of whatever power envelopes are there. If there's apreciable harmonic energy or just reflected power it will quickly show up as an aberration from the norm.

It is certainly proportional to the modulation whether its a sine or asymetric modulation source. It is responsive to the audio harmonics if any. I can tell if something goofs up and suddenly starts modulating the radio with a noise
or background mod using a pep meter. The rms meter won't show this near as easily if at all.

This one throws me. I dont know what you're getting at on #3. I would say that if you stop modulating, the PEP meter will drop to whatever the carrier

is resting at, so, if you tuned something it would show the trend.

Let me ask this, if all you had on hand was a peak reader and an rms meter, which one would you use to set the modulation limiters in a typical CB?

My own opinion provides that I would use the peak reader because it will show the dead key power and allows me to set the 100% modulation limit based upon the 4x carrier convention even though I'm using a very complex waveform (voice). Furthermore, if I wanted to calibrate a modulation meter based on your convention, I would be have more faith in the measurement because the peak reader is looking at the instantaneous values of all the phase combinations present in voice. Of course this is not the prefered way to do it but I'll bet it comes close if the meter is good.

Hahaha, that's being a little harsh on a mic that has stood the test of time.

You can buy all the extra equipment you want and any studio mic you want and still sound crappy. In most cases all you're doing with that extra stuff is compensating for component aging or the misalignment of the radio. And, naturally, the fidelity of your OWN voice.

Understand that "good audio" is such a subjective term and open to every listeners interpretation.

I've taken D104's and without much effort made them sound as good as any Heil or whatever mic. You can do similarly with a Yaesu MD1(or MB1?) or a Kenwood MC50/60.

Do yourselves a favor, before spending mucho bucks on extra's, get the radio aligned by someone who will take the time to do it right. That doesn't necessarily mean following the alignment instructions to the letter. If your radio uses a crystal filter in the SSB path then even a month old radio will require some touching up in the carrier generator to match that filter.

The crystal filter represents a minimum of half your fidelity, maybe more depending on it's shape or passband. As with any new crystal there is aging. A new crystal shifts more in it's early life than it does later in life. Unless the crystal has been burned in at the factory to the point where it's reached the maximum stability(unlikely), you're gonna need it aligned every so often. Like I said before, even a new radio could use some touching up within the first few months of operation.

Remember, depending on the filter's passband, all you can hope for is a 3.5 - 4khz window of fidelity and usually a little less than that.

Then you go after the mic. A D104 can easily be taylored to suit your voice as well as the other mics I mentioned.

I *love* my President Grant, and the Jackson is really the "granddaddy" of
the original Uniden Export series (included the PB010, PB042, and PC999 chassis).
These included rigs like the SS-360FM, 148GTL-DX, Jackson, and Grant.

However, these are getting a bit long in the tooth so to speak. If I were
buying a rig today (and I'm certain I wouldn't since there is almost no
11M usage around here) I would consider the 2950 over just about
everything else available.

LOL! I love how criminals are so passionate about blaming others
("it's the FCC's fault, not mine") for their own disregard of the law.

-Aaron-
ï¿½
FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS
ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a
transmitter that requires a grant of equipment authorization but for
which no grant has been issued, and that it's a violation to transmit
on frequencies allocated to a licensed radio service "without the
appropriate Commission-issued station license." Violators could be

subject to fines or imprisonment as well as equipment seizure and forfeiture.--FCC

As you noted, there is no need for two-tone testing to check power levels.
An RF wattmeter can be used with a single tone. The two-tone test allows
you to check the linearity of the SSB amplifier. It also allows you to
the maximum audio level that will not cause flattopping.

Not much. I only have 8 linear amplifiers in the house, including two that are capable of legal limit operation. I have had others in the past, but they are no longer in my collection.

> Hook it up to 220, it may still dim the lights a little, and I have
> alsways seen a few more watt put out with just a small amp.

If dimming still occurs, then there is a problem somewhere. The possibilities that I can think of offhand are:

1) a bad connection in the wiring between the distribution box and the rig.
2) a bad wire somewhere between the distribution box and the rig.
3) a problem in the feeder wiring - somewhere between the pole pig and the distribution panel (including any connection).
4) drawing too much power for the service that you have to the house. (very unlikely - but possible with an old house).

In any case - it indicates that a potentially serious problem exists. It needs to be found and fixed.

If the 110 volt circuit has adequate sized wire - in other words, not the normal 15 amps, then you will not see any significant difference in output wattage when you go to 220 volts.

But the 220 volt service is easier on the transmitter power transformer, as the I^2*R losses (eg heat) is reduced.

The thing to remember here is that at 240 volts, there will be much less
strain on all involved apparatus.

Excellent point, Dick. Usually some modest current is always drawn -
one wants to run class ab (actually, one of the new rigs can throttle
down from 150 or 200 watts to 75 watts and run class A!). Of course,
as one starts getting into serious power, some may prefer to run the
thing as near to cutoff as possible to save power (at the expense of not
having as clean a signal). We won't get into the '179 degrees' of
conduction of an alleged class C amplifier.

Besides all of the aforementioned, it is also prudent not to try and
drive the thing for all its' worth and wring every last watt you can
from it. Flat topping is more serious than the minor distortion at the
low end of a linear.

Aaron, I'll grant one big point to you. Did you check that website out?
Did you see the note about how to eliminate noise from the echo board?
I'll ask anyone to give me an amateur callsign of any ham that uses an
echo on amateur bands (I'm not counting if he/she uses one on cb).
Anyone got a callsign that we can e-mail 'em and check out if they use
echo on amateur bands? One generally does not hear echos nor
roger-beeps on HF amateur bands (ten meter fm repeaters courtesy beeps
not included).

>Illustrating these marked differences should have shown that PEP is just as
>valid a measurement as RMS for AM.

All the talk about two-tone tests are irrelevant with AM. That may
sound crazy, but consider this: Take a carrier and modulate it with a
single tone to 100% modulation, then add a second tone. Guess what --
the power doesn't increase because you maxed out all your sideband
power with your first tone. Adding a second tone will just cause
overmodulation. You can add a second tone to the signal if you are
willing to reduce the amplitude of the first tone, but then the
example becomes moot.

Once again, the RF power and modulation power of an SSB signal are
directly proportional, while they are not proportional with an AM
signal. That's why PEP will give you a meaningful reading with SSB but
not with AM. Don't get me wrong -- I'm not saying that your PEP meter

isn't going to read anything on AM, just that what you read doesn't
mean anything.

You missed the semantics: A carrier is a constant-amplitude signal
used to "carry" information, but doesn't represent any information in
and of itself. A sideband is a product of modulation and necessarily
carries information. A single-tone sideband is similar to a carrier in
that they are both constant-amplitude signals, but that's all I said.

>In the CB world your conventions are rarely observed.

And that's the problem. But just to make clear one very important
point, these are some of the standards and techniques that are used by
nearly every radio service EXCEPT CB. The problem is that many CBers
prefer to ignore the scientific foundations of radio in favor of "big

watts", "swang", and other technical hocus-pocus. It's not my fault
they are ignorant, but then the CB service wasn't intended to be used
by only the electronically adept. It is unfortunate that some would
choose to create and spread fairy-tales instead of taking a little
time and effort to learn how things really work in the RF world,
because the laws of physics don't change just because it's CB radio.
Radio is an applied science that has been around for a century, and
since I'm not that old these are certainly not "my" conventions -- you
have 60+ years of catching-up to do.

>... It is possible to make
>your PEP (considerably) greater than 4X the resting carrier especially when
>an amp is involved. The PEP meter will still show a unmodulated carrier
>power.

If your PEP is exceeding 4x carrier then your carrier is fluctuating
with your modulation (a cheap and dirty power trick that causes heavy
harmonics, can't be detected properly by the receiver, and has already
been discussed to death). But since your PEP meter isn't going to tell
you how much your carrier is changing, it's EVEN MORE USELESS than
before because now you can't even measure your modulation!

>---
>sparky wrote
>> Now, since your example applies to both AM and SSB, what does it have
>> to do with why PEP can or cannot be used to measure AM power?
>
>reply
>While PEP is not the only way to measure AM power it is a usefull reading.
>I'm not promoting either one as the defacto standard for AM. I'm simply
>condradicting your ascertion that a peak reader cannot be used at all.

How can it be useful at all? It can't measure true power, it can't
measure modulation, it can't detect carrier power changes, and a
modulation meter is easier and cheaper to build. What does PEP
represent with an AM signal? Nothing useful or important.

>---
>sparky wrote
>> AM power measured with PEP boils down to this:
>>
>> 1. It is not proportional to true power;
>> 2. It is not proportional to modulation;
>> 3. It does not indicate any variation of carrier power;
>
>I say a good PEP meter is more representative of the total amount of rf
>going up the line because it takes into account the instantaneous phases of
>whatever power envelopes are there.

But your RF power is not proportional to your modulation so all your
readings mean squat, -especially- when the carrier power is changing!

> If there's apreciable harmonic energy or
>just reflected power it will quickly show up as an aberration from the norm.

Reflected power is why they use directional couplers. Power from
harmonics will show up regardless of what kind of meter you are using.

If your power increases (or decreases) with modulation using an
averaging RMS meter then you know something is wrong. But if you are
using a PEP meter on AM you won't be able to tell the harmonics from
the carrier from the modulation, so the PEP meter is ONCE AGAIN
useless on AM.

>It is certainly proportional to the modulation whether its a sine or
>asymetric modulation source. It is responsive to the audio harmonics if any.
>I can tell if something goofs up and suddenly starts modulating the radio
>with a noise
>or background mod using a pep meter. The rms meter won't show this near as
>easily if at all.

That's not true at all. First, you may have a relationship between RF
and modulation powers, but it certainly doesn't have the constant
proportion needed to use PEP. This is true simply because AM uses a
carrier. And once again the situation becomes worse when that carrier
isn't a constant-amplitude signal.

Now you might know your equipment very well, and you might be able to
tell if something is different than normal, but there is no way to
quantify your perceptions with a PEP meter. That's the point of
metering in the first place -- to quantify. And yes, an averaging RMS
meter will show when something goes wrong. It happens all the time.

>This one throws me. I dont know what you're getting at on #3. I would say
>that if you stop modulating, the PEP meter will drop to whatever the carrier
>is resting at,

See above re carrier power variations.

>... so, if you tuned something it would show the trend.

huh?

>---
>Let me ask this, if all you had on hand was a peak reader and an rms meter,
>which one would you use to set the modulation limiters in a typical CB?

The O-scope. I keep an averaging RMS meter hooked up (along with the
modulation and SWR meter, they are all in the same box) for the sole
purpose of making sure everything works, and that's all. I don't
calibrate with power meters because most of them aren't of calibration
quality, and I don't need them to calibrate a radio. In fact, I don't
even need the scope, just a high-impedance multimeter and measure the
modulation input voltage to the final.

But if I am limited to a PEP or an averaging RMS meter, I'll take the
RMS meter simply because it makes USEFUL measurements. If it moves

during modulation there is a problem. If it moves lower it can be a problem with the power supply, or the modulator amp may be not be balanced (for whatever reason). If it swings high then there could be a feedback problem, or even RF oscillation in a driver or the final. If it jiggles with hard tapping on the mic then it's overmodulating, but overmodulation can also make it swing high or low depending on what is clipping. If it jiggles with or without modulation then you need to break out the scope and get to work because the oscillation could be anywhere. The only thing a PEP meter is going to show you with AM is that something is modulating. That's all.

BTW, of all the shops I have worked, there was always some high-priced wattmeter on the shelf collecting dust because it rarely got used. We usually used the cheapies because they showed us everything we needed to see, and all we needed to see was a smooth response when tuning the pre-drivers and finals. As long as it was close to specs that was fine, because as long as the stage was tuned for max efficiency it was going to be near spec anyway. A couple watts above or below spec, even a spec as low as 25 watts, doesn't indicate a problem, and doesn't amount to squat in terms of performance. The real nit-picking is done with the receive. If it doesn't break squelch at 0.3 uV (or whatever the spec is for squelch on the particular radio) then it doesn't leave the shop. THAT'S what is important.

>My own opinion provides that I would use the peak reader because it will
>show the dead key power and allows me to set the 100% modulation limit based
>upon the 4x carrier convention even though I'm using a very complex waveform
>(voice). Furthermore, if I wanted to calibrate a modulation meter based on
>your convention, I would be have more faith in the measurement because the
>peak reader is looking at the instantaneous values of all the phase
>combinations present in voice. Of course this is not the prefered way to do
>it but I'll bet it comes close if the meter is good.

You STILL fail to realize that the power will NOT INCREASE beyond 4x carrier even during overmodulation. You would need to intentionally overload your audio with white or pink noise, run the limiter up until the needle stops, then back it down until it starts to drop. Not a very good method at all when it's much easier and more accurate to measure the modulation input level with a multimeter.

That's because most hams are interested in communication, not public masturbation. Timmy may whine about that analogy, but he will be hard pressed to find more than a few minor differences to dispute it.

Count me among those who would like to strangle the bozo who invented the
courtesy beep.
You want to leave some breaking space do it with the id'er. Set it up to
id only at the end of a transmission, do it at 20wpm of good square wave
audio at max deviation. Bury a quick thumb a few times and he will quit
it in a hurry, all without driving your listeners and control ops over the
garden wall.

I was remiss in not defining that the true rms meter in my statement is an
RF Wattmeter that reads in average or rather True RMS.

I agree with your statement Bill with a slight caveat. A voice should have a
PEP of about 4 times the single tone RMS reading.

So if the amp starts to flat top at 1000 watts with a single tone then youre
average shouldn't go much above 1000/4 or 250 watts.

This doesn't mean all the time you're speaking. Just whenever your voice
hits those peaks which under non limited/compressed conditions is about
20-30% of the time. I figure as long as the alc is connected and adjusted
for the band youre on it shouldnt be a problem.

I think you all forgot that "GAIN" is a relative thing. Did you know that Gain is dependent on how high you have you antenna. A 1/4 wave antenna is 0 Dbd on the ground or up to about a few feet but if you raise it to say 70 feet it is possible to have alot of gain. One thing I can say about a 1/4 wave is your radiating patern is excellent for DX. Bill

I used to talk on the CB in the '70s and back then many of my friends used linear amps of 100 watts (approx) in their cars and at home. Are the amps still as easy to get as they used to be? I used to have two different ones (a tube and then a solid state).

Thanks for any info. (I'm not trying to buy one, just curious).

Gain is typically a measurement of the difference in signal radiation strength of a given antenna compared to that of a 1/2 wave dipole under the same test conditions (for dBd) , or as compared to a theoretical 1/2 wave dipole in free space (dBi or dB isotropic).

Since this dipole is the reference antenna, it will always be zero dB because the test antenna being compared to it will either be better (+X dB) or worse (-X dB) than the reference antenna (0 dB).

Using accepted gain measurement practices, height would not affect the results, because the comparison is done under the same test circumstances. In other words, if a given antenna at 50 feet measures a 6 dB gain over a dipole at 50 feet, it will also measure the same 6 dB gain if both antennas are raised to 100 feet.

However, for the CB band, I guess anything goes as long as it sells antennas...

The question you should ask is: what are they relating the gain figure
to?

I've often found that they stated gain figures are based on something the
marketing dept. pulled out of thin air.

In all actuallity, you might want to think of a 1/4 wave verticle antenna
(ground plane) as having 1.3 dbi of gain (gain relative to an isotropic
radiator). A Dipole antenna has 2.71 dbi of gain (and is often used as a
reference for beam antenna gain, etc).

As for the commercial units you mentioned, the actual gain is lower than
a dipole (the Antron 99 is nothing more than an end-fed 5/8 wave
antenna).

also, any coils (loads) on the antenna often sacrifice real gain and
efficiency for space (thus, the gain goes down).

Hope this helps.

Not quite. dBi is gain compared to a theoretical point source isotropic
(same in _all_ directions, i.e. the polar diagram is a circle in every
plane) radiator, not a dipole, (half wave is the only sort, anything
else should be referred to as a doublet). This is theoretical as there
is no known method of creating an electromagnetic wave from a point
source.

>
> Since this dipole is the reference antenna, it will always be zero dB

A reference dipole is 0 dBd == 2.71 dBi, so we have two scales in common
use, which have an offset of 2.71 dB. Quite a few commercial suppliers
use dBi even for Yagi-Uda antennas to inflate the claimed gain figure
by 2.71 dB. They are also often guilty of specifying gain in dB, a
practice which renders their claimed figures meaningless, they could
be dBdl, for example (dBdl is gain relative to a dummy load)
>
> Using accepted gain measurement practices, height would not affect the

Again I don't agree. The accepted practice is to measure gain relative to
an isotropic radiator, or a dipole, in free space, i.e. infinitely far from
any ground plane or anything else. Gain is really a crude measure of the
way in which an antenna system (includes ground plane, radials etc. etc.)
distorts the radiation pattern. Gain figures should always be accompanied
by an indication of the direction in which this gain is produced. Some
directions are more useful than others for AR!!! Polar diagrams are very
much more informative as far as real world performance is concerned.

>
> However, for the CB band, I guess anything goes as long as it sells

> (ground plane) as having 1.3 dbi of gain (gain relative to an isotropic
> radiator).

An ideal 1/4 wave vertical over an infinite perfect ground plane has a gain
of about 5 dBi.

Neglecting earth ground effects (reflections and loss), an ideal 1/4 wave
vertical over some lesser ground plane system will have a gain somewhere
between 2 and 4 dBi.

>A Dipole antenna has 2.71 dbi of gain (and is often used as a
> reference for beam antenna gain, etc).
>

An ideal dipole has a gain of 2.2 (2.16) dBi not 2.71 dBi.

If you have a very good measurement setup you'd be lucky to measure gain
within 0.5 dB.

Ah, but Steve, none of us live in an 'isotropic'
universe! We have to settle for this real one.
That means that the 'db's that the manufacturors
use is in reference to a beer can in the back yard.
That's why the gain figures for most antennas are
so high. Didn't you know that??

Hello Wayne: Give these guys a try.

http://www.retrocom.com/
http://www.retrocom.com/walter%20ryan%20collection.htm
http://www.cbgazette.com/gaz2.html
http://www.cbgazette.com/siltronix_chart.html

One of the guys who comes out here to rec.radio.cb has a web site on the Siltronics radios and such, his name is Phil.

If you contact the first web site that I have listed, dave carries and sells the 8 or 12 pin Octal power connectors for the older radios. Well worth the try.

Every Swan/Sillitronics rig I ever saw had a monumental Cinch-Jones connector on the back for the mounting of a 12 Volt converter that took a lot of conversation with the inside of the unit. The 120V cord used two of the sixteen I think pins which should be fairly easy to find with a bit of wire tracing from the xfmr and the on/off dual switch. This is not brain surgery and should be well within the ability of someone planning a restoration.

For that matter, putting 'Siltronix' into a search engine should be within his capability as well

Hiya Everyone

I belong to an aircooled VW club and we are considering getting CB radios for our members to use when travelling in convoys and to shows to keep in touch with each other (mobile phones are costing us a fortune).

The problem is, we know absolutely nothing about CBs, equipment needed, licences (if we need them or not) etc or even whether or not this is a practical solution for us.

We don't want to spend a great deal, so advice on the least amount of equipment we would have to get would also be appreciated.

Could anyone advise me, or point me in the right direction to find this info? Thanks for your time.

Tammy
PS I am in the UK (in case this makes any difference)

> In any case - it indicates that a potentially serious problem exists.
> It needs to be found and fixed.

Bill,

I had that problem until I eventually burned out the electric company's 600 ampere / 3-phase service transformer that was located inside a 4 foot square, dark green colored, steel box on a concrete slab outside my house.

That single transformer provided all the power to the house and the four 'outbuildings'.

The electric company said it looked like it had been struck by lightning, but there were no signs of any damage to the box itself, so they couldn't understand how the lightning could have gotten to it to be able to burn it out like that.

They replaced it with a 1200 ampere unit and I have not had any problems since.

Regards,

Dennis O.

Here again we see keyclowns promoting the idea that anyone who does
not like amps is gay. Hm. This might be considered "spamming the
newsgroup with gay stuff". I will perhaps call the attention of Mr.
Vaughns ISP to what Mr. Vaughn is doing in rrcb.

How come he needs to run to that website and beg Skipp to help him?
Putting on a new AC power cord isn't the equivalent of thorassic
surgery, you know.

I need to replace the Audio Power Amp in a Cobra 29LTD Classic gold-face.
Am I correct in remembering the part number as being a TA7222P? The one in
the unit has no markings... Must be a REAL generic one...
On a second question, would could be the cause of repeated failure of this
part? By the looks of it, it has been replaced before.

Thanks!
PH

I am a fallible human like anyone else.

I had been asked to help identify an unknown amplifier box purchased at a garage sale.

I provided the person who was requesting the information all the info. I had on the unit in an effort to help him be sure it had been properly identified..

Yes, it was a very loud and 'dirty' amp..

Yes, it was designed, built, and sold by a HAM operator located somewhere in the Eastern time zone during the 60's and 70's.

Yes, he used the proceeds from those sales to finance the start a few other businesses.

For a short time he went back into production, (early 80's I think), and sold the same ELKIN amplifiers in a completely different looking solid black case under the 'ZODIAC" brand name.

I think he is completely legit these days.

Regards,

Dennis O.

The FCC stopped issuing CB licenses in about 1982 or 83. It's possible
that they still have the records somewhere, but I wouldn't bet on it;
they moved into new offices within the last few years and probably did
a little housecleaning.

Might even have an ECG replacement. Failures on these parts are usually coupling caps or shorting/opening the speaker circuit and they overheat. Do a visual on the circuitry, there is not a lot beyond the chip, paying special attention to the socket for an external speaker and things in its vicinity.

Tammy,

IMHO I think that the FM (Family Radio Band?) walkie talkies would serve you better if you're planning on staying within a mile of each other. The reason I say this is that, due to the atmospheric conditions in the day time, the CB band is not good for talking to others close by. It's because the atmosphere reflects so many hundred or thousands of other people talking around the world that you'd be able to talk to someone thousands of miles away but not very well when they're close. It's called "skip". Skip ruins the CB band in the daytime hours (because the sun is hitting the upper atmosphere when you can see the sunlight). Imagine the sound of thousands of people all talking at once and they come in real loud too....but only in the daytime.

HTH,
Dave

Probably either that or a TA7205. They are not interchangeable. If you
look on the board for which pin is on the ground plane you should be
able to tell the difference. On the TA7205 pin 9 is ground, while the
TA7222 ground is pin 8 and pin 9 is output.

>On a second question, would could be the cause of repeated failure of this
>part? By the looks of it, it has been replaced before.

If your radio is tweaked or the modulation limiter is disabled, that's
probably the cause. Those chips are only rated for 5.8 watts max, and
that's intermittent duty with a huge heatsink. Another reason these go
bad is because of poorly regulated power supplies, or the overvoltage
protection in the radio has failed or has been disabled.

Hi Wayne,

You can Email me direct if you still need the plug information. It is on the circuit diagram, although not the best connection is shown. I've got the true safe 3 prong diagram made up somewhere that I can share.

The matching female cinch jones 12 pin socket has some internal jumpers, the three power cord wires (if your wire a properly grounded plug) and a strain relief.

The bad news is that Cinch Jones no longer carries the socket. But I've found a replacement supplier. I'm not in business to sell cords, but earlier this year, I made up 1r special cords with high heat 105c leads and my very special sealed shrink tube. Sold every one in less than a month... I've bought new sockets, but have not made up the cords yet.

OK, you can find the web page at http://sonic.ucdavis.edu/siltronix and I try to cruise by here once in a while to say hi to friends and find out if anyone has exposed the fake Aaron Boobner guy yet. Maybe I should call that secret phone number again.

Enjoy your radio... I can also field Swan, Wrl Galaxy, repeater, amplifier and mucho commercial radio questions if your patient.

I agree on FRS, but not for the same reasons. They are cheaper, there
is no installation (no holes to drill in the dash or body), no
mag-mount antennas that could scratch your roof, no cables to run,
etc. Also, if some of those old bugs are still running 6 volt systems,
you will need an extra 6 volt battery to get the needed 12 volts for
the CB radio.

Skip really isn't a problem for close communication, because the
squelch knob will take care of that problem easy enough. The real
problem is the offensive and vulgar language used by some CBer's these
days. Bad language has always been there, but it seems to be worse in
some areas than ever before. And some of them are on the air just
looking for a fight. If your group is out to have fun then avoid the
noise and go FRS, but keep a cell-phone or two handy for an emergency.

Hello Wayne: Contact Skipp at:

http://sonic.ucdavis.edu/siltronix/

He may know of a source for those connectors. I know that these
Cinch-Jones connectors are still made and sold.

I know that Electronics City in Burbank California carries them, there
on Burbank Blvd, and probably have a web site. Tell em Jay sent ya. I
have done a Gizillion dollars with of business there.

Hello Tammy. Unfortunately, you've stumbled onto a yank board - and a fair number of us are close to brain-dead. I did a search with mailgate and suspect you should try uk.rec.radio.cb - a UK cb newsgroup. They would be much more capable of answering your questions as the rules are considerably different than they are for us. Give it a try and I'm sure you'll get a lot better info than we can give you here.

Dynamics are basically a speaker used backwards and are typically lo-impedence lo-output units which is admirable in their place. For a number of reasons, lo-impedence is preferred for long runs or lots of switching and most mikes today for studio or big hall use are dynamics. In contrast to the 1 or more volts p-p produced by a crystal mike, a dynamic even with a transformer to match its typical 600-700 ohms to something like 100k will produce something on the order of 0.1 v p-p which is well within the overload range. As one poster noted, the usual bipolar transistor preamp is about 2k so the dynamics work admirably. Life moves on.

Rather than start a pissing contest about mikes, I started this thread with the idea that mikes are part of a system and in and of themselves are good and bad for the intended purpose only.
To talk of hi-fi SSB is flatulence unless one is running AFRTS; the object is communication not broadcast quality and ultimate fidelity is determined in the filters and preamp circuitry in any case. Most times this is done digitally rather than with filters where fidelity is an issue. Even the Canadian time station CHU is digital although it sure sounds like SSB with carrier.

Communications audio is notable for lacking virtually any component below 2-300 Hz and little above 3kHz. Within this range, a rising characteristic is often preferred to a flat response. This characteristic can often be achieved by running the mike into a load somewhat lower than that for which it was designed. Where compression or limiting is employed keeping levels right is really necessary and this is the usual state of affairs, at least the limiting, in most CB transmitters where Red the tech has not used his fingernail clippers on the limiter

Sometimes the trick is to know what the transceiver was designed for and why. Yaesu tends to the high impedence where Icom goes low so it is a neat idea to have some control if if you are not using the stock mike. That a given mike works on one rig but not on another is not the mike's fault. The same D104 will probably not drive the Icom but requires an attenuator on a Yaesu. And if you own Ten-tec you could probably plug the mike jack into the wall without overload.

In the endless discussion of amps and swang, I did have a bit of a motive: good communications audio is where the game begins and it has been highly neglected in the testosterone trip that it seems CB has become. Truth of the matter is that we haven't come far if at all in communications audio since Motorola abandoned the carbon mike.

5096. Uniden HR 2600 10, 11, 12 meter radio

Newsgroup: rec.radio.cb
Date: 2002-05-23 06:54:13 UTC
From: Mark <grandmhg@gocougs.wsu.edu>
Message-ID: <uep4gv10gprf1a@corp.supernews.com>
Source record: 124957

For Sale: This is a Uniden HR 2600 Ham Radio. It has had the microprocessor
replaced and now works on 10 and 12 meters. Please email me for information on modifications. I recently had the final transistors replaced by a professional technician. He also tuned it up and made sure it was in good operating condition. It puts out a solid 10 watts on AM and FM and around 40 watts on sideband.

It has the ChipSwitch mod done. The ChipSwitch mod allows continuous operation from 24.800 to 29.999 mhz. There are 5 bands. Band 0 tunes the entire range. Bands 1 and 2 have 10 memories each and can use a "-" repeater offset. Band 3 is similar with a "+" offset. Band 4 has the standard 40 channel citizen's band (CB) channels, but the VFO allows for tuning above and below 1-40. You can set many of the functions of the radio including duration of the beep, split frequency operation, scan and seek limits, scan hold time and mike up/down functions.

Comes with the original hand microphone (UP/DOWN) in good shape, DC power cord, original operating manual and ChipSwitch manual.

Disclaimer: A previous owner has installed &#65533; inch high "legs" on the front edge of the bottom of the radio. Please email for photos. Also, The original connector in the back has been altered by adding a toggle switch for internal/accessory speaker and RCA jacks. There is no mobile mounting bracket. Due to the type of equipment and age, it is being sold "AS IS".

Price is $250

Buyer pays actual shipping and insurance if desired. (I will not be liable for damages if the item is not insured.)

I accept Pay-Pal or money orders only. Please email me for additional info or photos.

Mark

Here we go again. I predict....

1) Mark will be "shocked" that anyone would even dare criticize him
for trying to sell 10 meter gear to CB'ers.

2) Some bozo will say the gear is not illegal to sell because it is a
"ham radio". (see below)

3) Bert will say there's no connection between CB'ers on 10 meters and
these types of radios being in circulation.

-A
ï¿½
FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS
ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's

capable of operating. The FCC says it wanted to clarify its rules on equipment that's "intended to operate in various radio services in the high frequency radio spectrum, including '10-meter' Amateur Radio Service (ARS) equipment." The notice--directed to "manufacturers, importers, vendors and users of these transceivers"--emphasizes that transmitters intended for use by FCC-authorized radio services except the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the transceivers discussed above are intended to be operated on frequencies where the use of type-accepted equipment is required, because of the simplicity of modifying them to extend their operating frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a transmitter that requires a grant of equipment authorization but for which no grant has been issued, and that it's a violation to transmit on frequencies allocated to a licensed radio service "without the appropriate Commission-issued station license." Violators could be subject to fines or imprisonment as well as equipment seizure and forfeiture.--FCC

Interesting theory, but if I were you I'd stop worrying about AKC
screen names and start worrying about more important stuff. Like how
you're gonna find customers for illegal cb gear when the rest of the
internet begins to follow eBay's lead and bans your goods.

Thanks. That's the essence of what I was trying to find out.

With so many linears available, I was curious why the band is *so*
quite in the Bay Area these days. At least when I listen with my
scanner (using a long wire antenna outdoors) it sounds so quiet that I
rarely hear anybody talking on the CB band....except for the usual
daytime skip, of course.

Hi John,

Actually, the non powered D-104 or and crystal cartridge mic will provide
the best punch for that or similar rigs. The input impedance of that
generation "style" of rigs is most often High.

The UK equivalent of FRS is PMR446, different frequency band - 446 MHz - but otherwise exactly the same.

They would also make nice rigs in the US for US licenced Hams.

But I haven't seen a 6 volt "Bug" for ages, but they must still be around.

Hi all. I have a 1995 Chevy (GMC) van. Which type of antenna and mount would be the most appropriatte? I'm not worried about height, so if the roof is the best spot, then so be it. As much info as possible would be great (Which brand, mount, coax, etc..).

As a side note, I tried a Wilson 2000 and 5000 (Center loaded) on the roof, and the SWR's were all over the place. A firestick had great SWR's, but I'm sure there are better antenna's.

Re: Swan and Siltronix Radio replacement power cables.
"The current 12 pin "Cinch-Jones" power cable socket part number."

Cinch-Jones no longer makes this connector "socket." I do a lot of Swan and Siltronix radio work, so I've done the home work for you. Molex sells the same type connector.

Just for your mental notes...

The Siltronix and Swan power connector 12 pin socket is available from Newark as part number 14F2451

This is a current Molex 3300 Series Socket with Cable Clamp S-3312-CCT

OK you Swan and Siltronix guys... have at. If you haven't been by the Swan Siltronix web page yet, you can find it on the

http://sonic.ucdavis.edu Amateur Radio Page, about half way down.

cheers

Since when is telling the truth about illegal "10 meter" radios being sold to CB'ers "trolling"? Likewise, if your CB hobby is based on operating illegally and to the detriment of other CB'ers, I'm sure you'd rather not hear someone reminding you about it. But that doesn't mean it's "trolling". It's simply the truth being told to someone who doesn't want the truth told to them.

A 104 to 109 inch steel whip is still the best mobile antenna made. any brand will do, but you do have to be more aware of power lines and trees

any other antenna is a step down... thats no to say there are some good ones out there, but a full 1/4 wave is the best for gettin out!

Thank you to everyone who responded to this post and took the time to
actually mail me in person.

I wasn't aware of the uk nesgroup, but now that I am, I will probably hassle
them with my questions :-)

Anyway, armed with the info received, today I checked out the local second
hand ads and bought myself a small hand held CB (with mag mount and swr
meter).

I went for the hand held option myself, because of the batteries. As
someone pointed out, some VWs run on 6V which causes a problem or two. My
1968 fortunately runs on 12V but despite that, still doesn't have an
accessory plug and to be honest, I wouldn't want to spoil the retro interior
by adding one ;-)

If I find it useful, I will probably look out for one to hard wire
eventually.

Well, thanks again. I know the info will be a lot of use to the others in
the club who are still looking.

Tammy

5136. MURS gets boost

Newsgroup: rec.radio.cb
Date: 2002-05-23 21:35:06 UTC
From: horseshoe7@yahoo.com
Message-ID: <5f4fe4c2.0205231335.52663b3e@posting.google.com>
Source record: 125001
Cross-posted to: alt.radio.family,rec.radio.amateur.policy,rec.radio.amateur.digital.misc,rec.radio.cb,rec.radio.amateur.misc

The latest MURS rules changes now simply limit transmitter power output to 2W, and remove the old 2W ERP restriction:

http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-02-139A1.doc

This effectively raises the ERP limit to about 10W for omni base stations, and about 50W with a directional beam antenna.

With licenseless services like MURS beginning to flourish, Amateur Radio just keeps getting less relevant.

> WA2SI

Yes, Bert, they are not only AWOL they deserted CB years ago. Even Riley's activity is subject to calls for Land Mobile problems so the Amateur enforcement is on a secondary basis with the 28 line enforced when they can by units handling Land Mobile cases on the trip home and truck stops looked at when the agent needs a whiz. When in town, they will put the electronics on 27 MHz to show the flag and bust a total idiot for fun and jollies but that is about as close as it gets.

If you are into management a la Peter Drucker you have to have 'posteriorities', things you do not do to have time to do the priorities and CB is one of the great posteriorities of all time. Bother a licensed service, or God Help You the airport or local PD, and they will be on your case in no time but bothering other CBers is not even a good misdemeanor.

Given that anything of any importance left 27 MHz years ago the decision to let it stew in its own juice is probably, under the circumstances, the correct one.

Dick NBK

>>
>>Don't want to disappoint you, so...not this particular model.
>
>Then what does this mean?

It means that Aaron's trolling again, Frank. The majority (...and when I say majority, I mean 99.99% of 10-meter intruders are found on 28.185 or more commonly known as ch. 19 "two up." In addition, the mode used is AM...does that sound like some adventurous freebanders to you? No, me neither. That's right, they're truckers trying to find a quiet channel. This is accomplished by using the band, rather than the channel, selector. So if we were talking about an AM/FM only Connex or Galaxy, I'd agree. However, we're talking about a HR-2600 with a Chipswitch installed and even if it's being marketed to freebanders, they're rarely (If ever) found venturing into the 10-meter band. Have you ever actually heard 10-meter intruders, Frank? I have, and they certainly don't fit the mold that our resident troll is attempting to assign to them.

>"It has the ChipSwitch mod done. The ChipSwitch mod allows continuous
>operation from 24.800 to 29.999 mhz.... Band 4 has the standard 40
>channel citizen's band (CB) channels, but the VFO allows for tuning
>above and below 1-40."

What does this mean, Frank? My Lincoln covers the CB...does that mean it's used for illegal purposes? Do I freeband? I'm but just one example of why Aaron's (...and your's?) argument is as full of holes as hunk of Swiss cheese. Are you aware that the Chipswitch also enables split frequency operation as well as other desireable features for a 10-meter radio. You seem to forget that I've been on both sides of the fence, so when you or Aaron start painting your scenarios with too wide a brush, dipped in a bucket of supposition, I'll call you on it. (Unless, of course, the two of you are on 10 and 11-meters on a daily basis. Particularly in the 10-meter Novice/Tech "+" CW sub-band, where 99.99% of all 10-meter incursions occur. Jerry O., care to chime in and get a little piece of this thread too? Am I lying?)

>Then what does this mean?

>It means that Aaron's trolling again, Frank.

Not trolling, simply stating the facts. Facts that you don't want to
hear, because they strip the euphemistic tag of "freebander" away and
replace it with one that's more realistic: "pirate".

>The majority (...and when I say majority, I mean 99.99% of 10-meter
>intruders are found on 28.185 or more commonly known as ch. 19 "two
up."

Wrong. It's "epidemic", to quote a QRZ editorial. A recent QRZ
discussion evoked hundreds of replies stating the same. The intruders
are ALL OVER the 10 meter band, from 28.000 to 29.700, in all modes,
AM/FM and SSB. I have heard them. Everyone has heard them. Take your
head out of the sand, Bert.

>In addition, the mode used is AM...does that sound like some
adventurous >freebanders to you? No, me neither. That's right,
>they're truckers trying to find a quiet channel.

I don't care who they are, they are "pirates", and since freebanders
are also "pirates", you all get lumped in the same bag. Especially
when both groups depend on illegal phoney "10 meter radios" and
"exports" to pursue their hobby.

<snip>

>My Lincoln covers the CB...does that mean it's used
>for illegal purposes?

If it covers addtional frequencies outside the citizens band then it's
not type accepted for the service it's being used in (CB). It's
illegal to use. Period.

>Do I freeband? I'm but just one example of why Aaron's
>(...and your's?) argument is as full of holes as hunk of
>Swiss cheese.

How so? The illegal status of these radios is regardless of their use, i.e. it doesn't matter if you transmit with them or not. They are illegal to sell and buy. (Read that FCC reminder I keep posting)

>Are you aware that the Chipswitch also enables split frequency
>operation as well as other desireable features for a 10-meter radio.

LOL, oh yes, and the 'roger beep' is so useful in amateur radio, too. Give it up Bert. Your justications are lame and everyone sees through them.

>You seem to forget that I've been on both sides of the fence, so when
>you or Aaron start painting your scenarios with too wide a brush,
>dipped in a bucket of supposition, I'll call
>you on it.

And when you run to the defense of pirate radio operators and their illegal gear, I'll be here to call you on it as well.

Does anyone know of any good UK based suppliers of CB Handheld Radios at all that you can order from.

Also what is the most powerful Handheld CB radio you can get and how far will it reach.

Hope someone can help.

Might suggest uk.rec.radio.cb. This is a collection of Yanks that rarely
if ever turn on a CB radio.

Don't start putting words in my mouth, Bert. You said that with "this
particular model" there was "no connection between CB'ers on 10 meter
and these types of radios". Then I quoted the original post which
clearly shows one of "this particular model" that has been modified
for both CB and 10 meter use. Does it sound like the type of radio
that is sought after by "adventurous freebanders"? Why yes it does!

> That's right,
>they're truckers trying to find a quiet channel. This is accomplished by using
>the band, rather than the channel, selector.

Someone should teach them the difference between the two knobs.

> So if we were talking about an
>AM/FM only Connex or Galaxy, I'd agree. However, we're talking about a HR-2600

>the mold that our resident troll is attempting to assign to them.

I have heard PLENTY of freeloaders in the 10 and 12 meter bands, as
well as the allocated space between those bands and the CB.

>>"It has the ChipSwitch mod done. The ChipSwitch mod allows continuous

I don't know, Bert. Do you freeband? And do you use an unauthorized
radio on the Citizen's Band?

> I'm but just one example of why Aaron's
>(...and your's?) argument is as full of holes as hunk of Swiss cheese. Are you
>aware that the Chipswitch also enables split frequency operation as well as
>other desireable features for a 10-meter radio.

Yep. Not allowed on CB, only AM and SSB. Full-duplex used to be legal
many, many years ago, but not any more.

> You seem to forget that I've
>been on both sides of the fence, so when you or Aaron start painting your
>scenarios with too wide a brush, dipped in a bucket of supposition, I'll call
>you on it.

And you seem to forget that I have been on both sides of the fence as
well. I may not be a ham, but that doesn't mean I don't listen to the
10m band (I also listen to the 2, 6, 80 and 160 meter bands).

> (Unless, of course, the two of you are on 10 and 11-meters on a
>daily basis.

I don't know about Voobner, but my radios get used quite a bit. The
lower freqs get quite noisy during the day so I surf the bands quite a
bit. Helluva lot more interesting than television.

> Particularly in the 10-meter Novice/Tech "+" CW sub-band, where
>99.99% of all 10-meter incursions occur. Jerry O., care to chime in and get a
>little piece of this thread too? Am I lying?)

I'm not calling you a liar, Bert. It may be that you don't cruise the
spectrum like I do, or you might just be in a interference hot-spot
that keeps you from hearing anything but very local signals. Whatever
the case, if you don't hear them then consider yourself lucky.

For what it's worth...

I had a temporary mount on my Astro van with the factory luggage rack; with a 4' FireStik clamped onto the front rail when I traveled -- several times -- worked great with a reasonable SWR over the entire band (~1.6:1 was the max, if I recall...)

Yeah, as others have replied, the proverbial 104" whip on a ball mount is probably the best, but you do have to watch your heigth.

You'll never go through a drive-thru window lane...

Aaron, unfortunately the rules of logical debate are against you here. You asked for the name of a town. When a name was given you claimed no facts were given. Did you forget the original question was answered? You must have, because you immediately attacked Twist for not answering a question you did not ask. It is not a difficult leap to guess that if Twist were to post a statement or a link to a news article showing that Beloit, Wisconsin did not enact these laws you would still say "Prove it." In your quest to be right you have forgotten that sometimes "The best offense is a good defense." If your really want to score points you should not have attacked with "Show me proof" "Show me proof, why don't you show me proof." Instead you should have looked up the information and countered with "According to the city of Beloit The laws were enacted" or "According to the city of Beloit there was never any talk of enacting such laws." Then you could have gone on with further evidence of your point and any facts you wished to give. See how simple it is? In fact it can be done very effectively with out even using insults.

Dave

Not so! The Ham freqs. WILL continue to be relevant. Look for the CB'ers to get into these five freqs and ruin them. Two watts? Bah! Since when has a CB'er ever played by the rules? Look for them to buy Ham two meter rigs, modify the TX, buy an amplifier with five watts in, 100 out and modify it, too. They will ruin the MURS frequencies within five years. Mark my words. Remember when CB was licensed and limited to 4 watts? Good concept, but it was doomed for failure from the outset. The MURS frequencies will meet the same fate.
The MURS frequencies will soon be yet another cluster f*ck akin to the eleven meter band, and the FCC will have not the resources to police the miscreants. It will be interesting to see how much interference these "new" CB freqs. cause to the nationwide cable TV system, too.
It will only get worse as power contests, filthy language, arguments, malicious interference and general eleven meter intellect creates havoc on these five frequencies. Ol' Bubba with a cheap, ungrounded station and a gut full of Old Milwaukee is gonna have a ball!
Once the radio mfgrs. get up and running (making $$$) all Hell will break loose. I give it five years, tops, before the rabble rousers ruin it for all.
Gee...yet another FCC idea gone bad.
And the FCC wants to usurp some of OUR bands for commercial interests? This

makes you wonder who the Hell is watching the store, eh?

You fail to mention that FCC degraded MURS from Part 90 to the Part 95 (CB) category, removed some previously allowed modes, and specifically requires that the radios be certificated, thus blowing away your outlaw chant about using Yaesu VX-5R.

Bottom line, it's a 2W CB service, good for not much more than a local intercom service. Fine for some limited requirements, but hardly competition to the worldwide capabilities of even a very modest Amateur Radio station.

With all kind wishes,

de Hans, K0HB

I'm not all that sure that they will; retail price for a decent VHF FM
HT, allowing for a reasonable profit, probably bottoms out around $30.
Retail for an FRS is around $30. Retail for a low-end CB is around
$50. Which will people want: 14 channels of burping cussing and farty
noises, 40 channels of burping cussing and farty noises, or 5 channels
of burping cussing and farty noises with the occasional Taco Cabana
drive-thru order on one of them?

Geek - somebody who enjoys or takes pride in using computers or other
technology, often to what others consider an excessive degree.

Nerd - Geek in training.

Well I dont' want to know that just how much per sq can we expect to make.
Do you figure it out that way or do you have another method like per
acre(43560 square feet), case i can do the math from that point. I need to
get me a Collins and a new boat and Camper.

It has the MRF477.

Of course, after reading the related threads, I have to say that this radio is only to be used to transmit on 10 and 12 meters by licensed amateur radio operators of for receive only on other portions of the radio spectrum.

Put it as high as you possibly can safely, make certain it is above other near objects. Go to a hardware store and buy the Ubolts for fastening it to the mast or pole. Make sure to use guide wire on the mast for every ten feet above the roofline (assuming you are not using a tower).

Also would help to be sure that the antenna and pipe/tower can not cross any
power lines, or if it does that it does so at a slight angle so it will
slide off intead of getting hung up on it.

CB calls? How about:

18QA8541 (Father's, late 1959 or 1960)
KHD6106 (Also Father's - renew the above about 1964))
KWG2939 (My first when I was old enough!)

Anyone else remember when there were numbered call sign districts for CB? Indiana was in the 18th and Ohio was 19th before the FCC decided that the number call signs didn't work with the international call sign allocation and were changed to begin with "K".

Tom,
That's not quite true. There were different 'blocks'
of CB call signs used in different areas. While they
were issued in succession within those 'blocks' (normally),
there were exception. For instance, the 'KDQ' series was
being issued in 1964-65.

you know you are a redneck if:

You can entertain yourself for more than an hour with a fly swatter.

Your property has been mistaken for a recycling center.

Your boat has not left the driveway in 15 years.

You burn your yard rather than mow it.

You think the Nutcracker is something you did off the high dive.

The Salvation Army declines your mattress.

Your entire family sat around waiting for a call from the governor to spare a loved one.

You offer to give someone the shirt off your back and they don't want it.

You have the local taxidermist on speed dial.

You come back from the dump with more than you took.

You keep a can of Raid on the kitchen table.

Your wife can climb a tree faster than your cat.

However, the restrictions on what types of pre-5/2002 Part 90
certificated radios will be allowed on MURS has been greatly reduced.
Now, most any 2W-under Part 90 radio will be allowed. Along with the
2W Transmitter Output clarification, this was the most important part
of the ruling, as there was great confusion as to what was legal.

> Bottom line, it's a 2W CB service, good for not much more than a local
> intercom service. Fine for some limited requirements, but hardly
> competition to the worldwide capabilities of even a very modest Amateur
> Radio station.

The capabilities of a well built MURS station can now compete with
those of a Technician Class station. Furthermore, MURS users have
certain privileges that Amateurs don't... for example, MURS users can
do business, or download short e-mails of any type of content to their
Mobile PDAs from Internet gateways.

The fact stands - MURS has been made a more capable service, and now
offers capabilities and privileges on the order of those of the
Amateur Technician Class license.

Well they are new.. There's quite a few suppliers who still have alot of stock of these antenna's. For example, check out http://www.palcoelectronics.com as they are selling the moonraker 4 for like $169 new in the box.. Just because AS went out of business, doesnt mean there's not still ALOT of stock out there :) I've seen a number of places trying to clear out this stock for over a year now.

Not even close to being comparable.

MURS -- 5 specific frequencies, less than 100 Kilohertz of total bandwidth.
Tech -- Millions of frequencies 23,962,000 Kilohertz of total bandwidth.
Advantage Tech 239,620-to-1

MURS -- One band
Tech -- Seventeen bands
Advantage Tech 17-to-1

MURS -- 2W output
Tech -- 1500W output
Advantage Tech 750-to-1

MURS -- Antenna height 20'
Tech -- No antenna height restriction.
Advantage -- Tech

MURS -- FCC certificated radios only. Modifications illegal.
Tech -- Free to use any purchased, homebrewed, or modified radio without FCC
certification.
Advantage -- Tech

MURS -- Operation restricted by US borders.
Tech -- Reciprocal operating agreements with nations all around the globe.
Advantage -- Tech

I could go on and on, but I'm sure you're getting the picture!

Comparing MURS to even the lowest privileged Amateur Radio license is like
comparing a tricycle to a Lamborghini, and the comparison suffers even worse
when you compare MURS to a General or Extra class Amateur Radio license.

That is an over statement if I ever saw one. MURS can no way
compete with any part of ham radio, even Tech class stations.

> Furthermore, MURS users have
> certain privileges that Amateurs don't... for example, MURS users can

Big deal, there are cell phones for business and internet for
e-mails.

Really, how many frequencies for MURS as compared to those
available for Tech class licensees? Compare the power levels
allowed by MURS as allowed for Tech Class. You must be dreaming.

True if all you want to do is this one thing. But what other license is
there
that lets you use various different modes in various different kinds of
bands? I could drive home with the 2m rig in the car, and once I'm
home I can work some DX on HF with CW or SSB or amtor or such.

"Arf! Arf!" <DoggieDaze@Liberalz.com> wrote in message news:<ackekk$dq5$0@pita.alt.net>...

This is the same old argument that we've been hearing for years... FRS
will become just like 11m(with illegal amplifiers), or MURS will
become just like 11m... of course it has been proved completely
wrong. The reason that folks on 11m went to amplifiers was because it
actually helps them increase their communications range - the fact
that they interfere with others when the skip is out is simply a
side-effect. With no skip, there is no incentive to go with
exceedingly higher power in the first place, because it serves
virtually no useful purpose on VHF/UHF.

So - you're going to have to come up with a better argument, this one
just doesn't wash any longer. Thankfully the FCC has figured this
out... too bad many hams haven't.

Stewart - N0MHS

There's the "no business" rule for ham radio. Which is actually an
advantage for hams in that we don't get invaded with business comms
eating up all or bandwidth. Lawsuits over QRM, etc.....

Heheheh ... sure .... <chuckle chuckle>
Um, what makes you think one can't do e-mail with amateur radio?
Of course, there is fast-scan television (regular tv) as well as slow scan tv. Uhhhh ... I sometimes take my HT (walkie talkie) to work to use during lunch. I've chatted with Australia, England, and other parts of the world ... no, not using internet linking - all rf path. This was with 6 double a alkaline batteries on FM (voice). I've had folks argue that one can't cut through one of those alleged 70,000 watt shoot-out stations. Can't fight the carrier. Hmmmm ... only need to be a short way off the carrier. There are modes that can be copied some 30 dB BELOW the noise level. 50 Hz bandwidths and less (another 20 dB gain). Actually, it should be possible to cut throught that 70,000 watt am signal with 100 watts (properly done, of course). Oh .. internet .. yep, can do that too ... but tell me how you work Australia all rf path on 6 double a alkalines ... with a walkie-talkie .... running all of 4 watts .... into a whip ... and that only requires a tech license. What happens if you have your extra?

BWAaaaaHAHAHAHAHA

try again from Rochester, NY
Jim AA2QA

ps although business use is not what amateur radio is all about, what is it that makes me think that business use is not at all on your mind?

That's fair enough, Aaron. But we're still talking about the original post. A HR-2600 is not the preferred tool of a 10-meter interloper. As I said previously, if the subject of this threaqd was a Connex or Galaxy AM/FM only radio, (Like the ones that can be found at many truckstops.) you'd have a point.

> >The majority (...and when I say majority, I mean 99.99% of 10-meter

> head out of the sand, Bert.

"Epidemic?!" Puh-lease, I've yet to see (Or should I say hear?) this great epidemic you speak of. I'm on the band, Aaron, and believe me...the sky is NOT falling. I don't want to sound like I'm saying the CB is squeaky clean, but it's not as bad as some would have you believe either.

> >In addition, the mode used is AM...does that sound like some

No, but I have been sued for refusing to sell a hound to a certain party. They lost.

> Your kids take a siphon hose to show and tell.<<

I don't think they ever did that, but they did take the head of the gator that took one of the dog's legs back in '74.

> You think a hot tub is a stolen indoor plumbing fixture. <<

A hot tub is any object filled with water that sits in the sun for an hour.

>You took a fishing pole to Sea World.<<

I dont' think I'm welcome in Sea World or any Disney based tourist attraction since I have signed just about every petition that goes against just about any development Disney attempts.

> You go to the stock car races and don't need a program. <<

This is somewhat true. Sunshine Speedway is full of familiar folk.

> You know how many bales of hay your car will hold. <<

Doesn't everybody?

>You have a rag for a gas cap.<<

No, but I may rip off the fancy little lock and cover to the truck and do just that 'cause I still get out of the truck without reaching under the seat and flipping that lever.

>Your house doesn't have curtains but your truck does.<<

No curtains in the house, all blinds. The truck doesn't have curtains, but the camper does.

> You wonder how service stations keep their restrooms so clean.<<

And that fresh smell...

> You can spit without opening your mouth.<<

Through the nose. Learned that with Beech Nut as a young 'un!

>You consider your license plate personalized because your father made it.<<

Not the plate, but the keychain dangles a coon's pecker..

>Your lifetime goal is to own a fireworks stand.<<

We do flowers on mother's day and Easter, pumpkins at Halloween, trees and wreaths at Christmas, and of course fireworks prior to the 4th.

>You sit on your roof at Christmas time hoping to fill your deer quota.<<

We can still do this on rare occasion but must use a bow now since we can no longer discharge a firearm in the county.

>You have a complete set of salad bowls and they all say Cool Whip on the side.<<

Hard to say...most of the writing is worn away.

>The biggest city you've ever been to is Wal-Mart.<<

Finally, one that doesn't apply..see..I ain't THAT red <g>.

> Your working TV sits on top of your non-working TV.<<

Hey, that old wooden RCA that swivels serves quite nicely as a stand for the new Sony big flat screen.

> You thought the Uni-bomber was a wrestler.<<

Wasn't he a professor? Oh well, he should have been.

> You've used your ironing board as a buffet table. <<

What's an "ironing board" <g>?

>You think a quarter horse is that ride in front of K-Mart.<<

Here I know better. Several folks used the workhorses before the county regulated livestock.

>Your neighbors think you're a detective because a cop always brings you home.<<

That's not a cop, that's a Captain.

>A tornado hits your neighborhood and does a $100,000 worth of improvement.<<

Ain't had one of them hit directly yet, but them hurricanes sure improve the fishing afterwards.

>You've used a toilet brush as a back scratcher. <<

Yea, but I don't do it often.

>You've asked the preacher "How's it hangin?" <<

I may have.

>You missed 5th grade graduation because you had jury duty. <<

Grammar school was the only thing that kept me out of high school.

>You think fast food is hitting a deer at 65 mph.<<

This is a perfectly acceptable and legal way of obtaining nourishment in WV.

> Somebody tells you that you've got something in your teeth and you take them out to see what it is.<<

I'm looking forward to that day, but I still have a few that do the job, until then.

>sdj is down in the dome..... <<

No doubt!

Frank, I appreciate where you're coming from but this thread is about
a HR-2600. A remark was made trying to associate 10-meter intruders
with this particular rig. If we were talking about a Connex or Galaxy
AM/FM only rig, I'd agree. It's been my experience that the HR-2600
serves an entirely different demographic. I think the party that made
the remark knows this but chose to post it for no other reason than to
troll. It's a familiar MO.

> > That's right,

As have I, but again...we're talking specifically about 10-meter
intruders. Not the "allocated space between those bands and the CB."

There have been lawsuits over exactly that. Cell phones can generate
60 V/m in the vicinity of your head. Exposure is most serious in the 30
to 300 MHz range. 30 MHz is very very close to the 11 meter band. In
a controlled environment (in other words, you know the effects of the
rf and no one else will be there without knowlege of the rf) the maximum
allowable exposure is a tad over 60 V/m. In an uncontrolled environment
(this is what you are allowed to spray into your neighbors' yards) is
only around one-half of that. What is the likely exposure? Well, put
a dipole in the attic. On 11 meters run 100 watts (illegal, of course,
but this is for sake of arguement). Expect something between 10 and
200 V/m! This will depend upon whether the antenna is directly above
you or 50 or more feet away and whether you are on the ground floor,
the second story, or the basement. Ground reflections also add to the
misery of figuring out what you will likely be experiencing. Just note
that this is ONLY 100 watts. 100 watts into a quarter wave whip will
likely net you something over 100 V/m standing nearby. I'll give ya
a hint though, camcorders won't suddenly eject a tape for no reason
other than rf at a few hundred V/m. My suggestion is that you make
sure you don't want any more kids before you attend any shoot-outs.

You're right on the money! I said this long ago. The MURS will be
adopted by the truckers and you can bet your bottom dollar that all 5
MURS frequencies will sound like CB Ch. 19.

On June 6th, 2002 AT&T Broadband will restructure the configuration
of the
servers, which provide access to Usenet newsgroups.

As a result, you will need to update your newsgroup settings. If you
fail to
update your settings will be unable to download new messages, post
new messages
or post replies to existing messages to newsgroups.

For Outlook Express Users:

First, Remove (Rename) Existing Account (you must do this first):

1. Open Outlook Express.
2. If your folder list is not automatically displayed, select
the VIEW
menu, then click LAYOUT. Click FOLDER LIST, then OK.
3. Click the netnews.attbi.com folder to create a list of
newsgroups to
which you currently subscribe.
4. Select the TOOLS menu, then ACCOUNTS, then the NEWS tab.
5. Select netnews.attbi.com and click REMOVE. Click YES to
confirm.

Then, Create a new news account:

1. Open Outlook Express.
2. Select the TOOLS menu, then ACCOUNTS. Click ADD, then NEWS.
3. Type your name as you would like it to appear and click
NEXT.
4. Type your e-mail address in the format username@attbi.com,
then click
NEXT.
5. Type netnews.attbi.com in the news server field, click NEXT,
then
FINISH.
6. Click CLOSE.
7. A prompt to download your list of newsgroups will be
displayed. Click
YES.
8. Choose the newsgroups to which you would like to subscribe
and click
SUBSCRIBE.

Additional information on subscribing to newsgroups is available on
the AT&T
Broadband Online Customer Support Center at
https://help.broadband.att.com/faq.jsp?content_id=1731&category_id=68#configure

Not really...it means we can get rid of those that want to order a pizza via the autopatch, those that have no idea at all what ham radio is supposed to be, and maybe we could use some thinning out and getting back to basic. Then maybe the un-informed crabbing about what the 'service' is all about will stop because those that are left will actually have read part 97.

All this talk about MURS, like it has anything to do
with what most people consider amateur radio! Amateur
radio is much more than simply transmitting and
receiving. Heavens!

If I need convenient, reliable communications with
other people, I use a cell phone. Sure, under
extraordinary circumstances, amateur radio may be
more reliable, but 99.9% of the time, I'm
way better off with my cell phone than my ham radio.

With the standards Hans used, MURS even is disavantaged as compared to CB class D (27MHz)! However, for that mode, the only advantage is more latitude on signal content (digital is allowed).

Now that we've established that it's worse than CB, you really need to go back to that dream you call life and tell yourself that everything will be OK, even after the labatomy.

Not needed. That DOS program that Dick recommended got me up to 25wpm in about a week. The program starts at 8wpm but that just seemed to screw me up -- it's a lot easier to learn at a faster rate, more like 15wpm. Anywayz, I'm not going to bother with ham radio until I know the final disposition of CW. I'm thinking that if they drop the code requirement, they might also drop the CW-only band segments later on. If that happens, and if the 1750m band falls to the hams, I'm going to be doing some pirate QRP.

That's a load of horseshit that a vulture wouldn't touch. You can't
work what you can't hear, and the only way to find a signal near the
noise floor is to improve your antenna. Even if the "other guy" gets a
linear, you still have limited range because of the crappy propagation
of the band. The only reason people buy linears is because of the
king-of-the-hill mentality that most of us abandoned after grade
school.

> - the fact
>that they interfere with others when the skip is out is simply a
>side-effect. With no skip, there is no incentive to go with
>exceedingly higher power in the first place, because it serves
>virtually no useful purpose on VHF/UHF.

Amps interfere with others, skip or not. Part of the "skip" they
complain about is bleeding from overmodulated radios and crappy amps,
and part of it is the normal increase in the noise floor from local
signals as the band use increases in the daytime hours. Anyone with a
scanner knows the latter is true because the exact same thing happens
with the cordless phone channels. So considering both those problems,
I can just about guarantee you that the same thing is going to happen
on FRS and MURS as it happened on the CB. And they will use the same
lame arguments to justify the use of amps, and for freebanding on
nearby freqs.

>So - you're going to have to come up with a better argument, this one
>just doesn't wash any longer. Thankfully the FCC has figured this
>out... too bad many hams haven't.

The FCC wears blinders to both reality and criticizm. When the abuses
with CB became excessive they ignored the problem and dropped the
license requirement. Their current reasoning for FRS is that they
implemented manufacturing requirements that would prevent abuse, but

they totally ignore the resourcefulness and determination of the pirates, as well as the historically high profits from illegal radio equipment. The existence of any band with little or no enforcement is just asking for trouble, and the abuses will continue until the Commission pulls their heads out of [the sand].

For the most part, there is very little action on any VHF/UHF band
other than 2m.

> MURS -- 2W output
> Tech -- 1500W output
> Advantage Tech 750-to-1

Unless your doing something bizarre, like EME, anything over 5W is
basically overkill. 2W TPO is decent, if you've got a good antenna.

And even 2m has gone dormant in recent years. Other than a few
high-level repeaters, the band is virtually unused.

Most people nowadays go on the Internet when they get home, and can
reliably talk just about anywhere in the world for free.

But, in any event, I'm basically comparing MURS to Amateur Technician
2m... there is now very little difference between the two. Hams have
repeaters, but most of them go unused these days, and any of the good
ones cost you money - so you might as well get a cell phone.

The biggest kicker is that, with ham radio, you can't even talk to
your friends, family members, and co-workers. This is why I've
continued to push for re-opening up the Novice Class as a no-code
VHF/UHF-only license - at least you would have somebody to talk to on
VHF/UHF.

I disagree, for the average Tech with a 2m handheld, a 2.1m hanheld
will compete quite nicely.

Anything over 5W is overkill for anything other than bizarre
applications like EME... 2W is plenty with a couple of good antennas
at each end of the link.

This statement strikes me as rather ignorant of reality.
If you're having fun using MURS, knock yourself out. If
MURS is as good as ham radio for you, that's your thing.
It just doesn't seem to make much sense for most of the
people I know in ham radio.

>reliably talk just about anywhere in the world for free.

FOR FREE? If you mean via the computer, there's still the ISP monthly charge
or its equvalent (the DSL line, cable modem, T1, or whatever). Who provides
that for free? If you meant free = "no additional charge", you failed to
account for the hidden monthly charges I just stated. Then, there's the
indirect charges, such as the electric bill (most people pay a power company,
or for gas for their generator, etc....).

Maybe they only go unused when you're around because no one wants to talk to
you, or like the people on this group, they've already "heard it all" from you!

Absolutely. What is wrong with that? Again, do you have some kind of
point? I suppose not... and it seems that is the underlying problem
these days with Amateur Radio - it is basically pointless.

Well, that's the beauty of it... the SkyWave has very low harmonic content unlike many other amps. This is a result of the regulated bias source be able to maintain forward bias when the drive signal comes in and attempts to shut it off...

Moonbounce? Have you completely lost all touch with reality? The
fact that is basically all Amateur Radio seems to have to offer on
VHF/UHF for a Technician operator PROOVES how irrelevant ham radio is
becoming

Repeaters, maybe... but moonbounce? Give me a break.

Stewart - N0MHS

P.S. You can already do repeaters on GMRS, and I suspect that MURS
will eventually be expanded to allow low-level repeaters on certain
new frequencies... I'm been pushing the idea of a crossband VHF/UHF
repeater capability, so Joe Average homeowner can set up a repeater
site inexpensively.

Aren't you forgetting the "All above 300GHz," which technically means
that Techs have an infinite amount of bandwidth? (Though building
those 300nm yagis can be a pain in the ass)

Also don't forget the little bonuses like IRLP, other link systems,
and in general, the ease of finding repeaters on 2m and 70cm. Even if
they allow repeaters on MURS, you won't be able to find enough of them
to give reliable comms over more than a couple of miles.

Nope, it just hasn't had time yet. There are still way too many
people out there that aren't familiar with FRS. Once they start
fiddling with it, some of them will start ruining it, and it will be
all downhill from there.

>

You did one phenomenal job but thanks for confirming that Morse is easier to learn at 16 than 8 wpm. I don't think your fears re CW are well-founded but I can see how you got there. It might surprise you to know:

1. The emissions are unregulated in a goodly part of the world now. It is done in most parts of the planet with a voluntary bandplan which is observed in 99 and a lot of nines percent of cases. The U.S. is rather unique in having sub-bands at all; more on why later.

2. The only actual CW Only bands in the U.S. are the lower 100 kHz of 6 and 2 meters which means that codeless Techs can dittybop there. And in fact CW is legal, if frowned upon, on any Amateur frequency until you get way high and often then.

3.The U.S. has traditionally given the rest of the world a place to hide from us. On 20 I can't run phone below 14.15 where the Canadians (and everyone else) can go to 14.1. They can run phone at 7050-7100 which is the top band edge in most of the world and no U.S. Amateur can do so unless he lives on an atoll in the Pacific included in ITU Region 3 and only then above 7075.

3. The 30-meter band does not allow phone at all so dittybop to your heart's content but stay clear of the digital modes.

Sum and substance: don't look for CW to disappear or be regulated out of existence anytime soon. A lot of hams enjoy wetware modes.

Traditionally new modes start out at the top of an allocation and either die there or spread down. SSTV is something of an exception because it takes an Extra to do it so it is run right below the general phone bands. QRP operation is typically done outside the mass on the low end as is PSK31 etc. Incentive licensing screwed this up a tad but it is still the way one starts a new mode or preserves an antique one -- you will get Ancient Mary on the high side as well, even on ten meters.

A lot of no-code fanatics are mumbling incoherently about abolishing narrow bandwith segments but they are not about to get it done. It will be interesting to see how the new 5.25-5.4 band is segmented in the US but you will have at least 50 kHz protected from phone probably shared in practice if not in law about equally with the digiboppers. Lots of room to play.

Take the test, Sparky, the world needs more W7s.

I would bet against it simply because rf either does or does not do damage
to cells. It is not cumulative below that threshold.

Back in 1962 when I was in school we built a microwave oven at 913 MHz
which worked well except that the occasional hot dog would be just the

right length not to cook. Solving that problem with a cleaver was more interesting to the public than warm wienies. Works a lot better at 2450 MHz. And the Ultrasonic dishwasher worked good too until we ran out of the detergent we were buying from the SludgePumpers (ChemEs) and someone put a capful of Joy into it. Looked like the laundry room in Mr Roberts when Ensign Pulver set off the firecracker.

The fact stands - the only reason that there is a "MURS" is that folks went to the nearest CostCo or BestBuy and bought the JobComm or Color-Dot radios which were intended for small business use WITH A LICENSE and then started using them without benefit of same. This is criminal behavior no better than the ham-band "bootlegger" or the broadcast "pirate".

The Commish'- to my deep disgust - was more interested in getting more economists and phone-company=merger specialists on board - folks who had no concept of what radio regulation was all about or should be - than in putting more law enforcement agents on the streets to clean up the mess, and the rest is history.

Two methods of Rules changes - go through the procedures starting with a Petition for Rulemaking, or just go ahead and do what the law does not allow you to do and if enough people do it the gov'mint will turn chicken and leave you alone.

The second method makes me sick.

<Enough ranting>

The FCC created MURS because Washington didn't want to bother
enforcing the rules. See my other post(s).

On HF, the best approach is to use the same amount of power as the station you're trying to communicate with, and use the best antenna possible. The same hold true on VHF, except that at a certain point, increasing power will do you no good, because the other station is out of LOS.

The point is - Amps are more useful on HF because of beyond LOS propagation - therefore they exist... it really does no good to use amps on VHF - their are of course a number of ways to increase LOS comm range, increasing Tx power is one of the least efficient(and ineffective after a certain point). I've written a web page about the whole deal:

http://www.geocities.com/horseshoe7/repeat.html

So please, do try to feed me a bunch of happy horsecrap about using amps on VHF/UHF - it is VIRTUALLY USELESS. You tried to apply my statement in the wrong context, and got yourself 360 degrees turned around - you tried to argue with me, but just ended up agreeing with me.

And that's the crux of the problem. The digital modes are quicky becoming the norm for a lot of hams. In recent years I have heard CW operators getting stepped on more often by appliance operators running square-wave-modulation. And with spread-spectrum coming into vogue, quiet CW holes are becoming both scarce and transient.

>Sum and substance: don't look for CW to disappear or be regulated out of
>existence anytime soon. A lot of hams enjoy wetware modes.

Maybe "regulated out" is the wrong term, perhaps "ignored into obsolence" is a better description. Licensed or not, I think there should be some protected space for what is still a usable mode. Like I said in a post in another thread, CW is still the most reliable mode of radio communication, requiring the least amount of bandwidth. And since all the signal processing is done with a human brain, CW beats digital technology with an ugly stick, IMHO. But the trend is towards

everything being "user friendly", aka "no intelligence required". Ever read "Dune"?

You did give me an idea, tho. It might be fun to adopt a new theme for my website: "Obsolete Wireless Communications". You know, methods like smoke signals, flags, messengers, homing pigeons, etc. And yes, CW.

>Traditionally new modes start out at the top of an allocation and either

>
>Take the test, Sparky, the world needs more W7s.

Don't get me wrong: I'm not stalling, I'm waiting. I don't have much interest in operating on the ham bands to begin with. About the only reason I would get a license is to run some of these old boatanchors. And I'm really not interested in using them, I just like restoring them and collecting a few that strike me the right way. Right now my interest is in firing up a small shortwave BC station. So a ham license is low on the priority list.

I think it depends on which lobbyist carries the most cash. A harsh
accusation to be sure, but many of the Commission's decisions in the
past few years are inconsistent with any other method of management.

> your style.

Are you kidding me? I've put out some WHOPPERS over the years on rrap. See below for an example of one: "synthetic ionization of the ionosphere".

But, I do think that the VHF/UHF ham frequencies are being wasted, and we need to reinvoke NOVICE class as a no-code VHF/UHF only license... or, simply expand services like FRS and MURS. 11m CB is a red-herring and has virtually nothing to do with VHF/UHF.

****
Tech advances force FCC to consider Ham HF freq auction:

WASHINGTON (AP) - Spurred by the many recent advancements in the Laser ionization technology field, the ITI Corporation (Ionization Technologies, Inc. - Fairfax, VA) has proven that it is now economically feasible to synthetically ionize specific areas of the ionosphere, opening up new many new reliable and low-cost telecommunications applications.

The best frequencies for utilizing this technology lie in the HF portion of the electromagnetic spectrum. While the HF portion of the frequency spectrum has long since been allocated to specific purposes; there are many HF frequencies which could be re-allocated to better serve the nation. The Federal Communication Commission(FCC) is considering re-allocating at least half of the Amateur Radio Service's current HF frequency spectrum to the newly proposed ISS(Ionization Skip Service), where it can better serve the public's telecommunications needs.

Stewart Robertson, President of ITI, says; "The older naturally-induced HF skip communication techniques essentially waste 99.9% of the HF bandwidth, and communications are generally of very poor quality, very unreliable, and end up causing wide-spread interference. Using the new synthetic ionization techniques, we can specifically direct RF energy over great distances, wherever we want it, anytime we want it. Communications are no longer predicated on solar activity - we can now directly and safely control ionization evels in specific areas of the ionosphere, opening up all kinds of new possibilites in reliable long-range communications applications."

>stewart - horseshoe7 - n0mhs

Maybe you are not familiar with the mentality of these idiots. Regarding amps, the most important thing is "swang", referring to needle movement. They start by modifying their radios. The modulation limiter is disabled so they can sound "louder", irrespective of splatter and harmonics. Then they run the output to a Class C driver with the intention of re-modulating the carrier just to get the peak power higher. Then it gets sent to the final amp, which is usually just a box filled with push-pull power transistors and wired in parallel. These amps are not designed for linearity, but for raw power. They are not intended for communication, but for "stepping power". Have you ever attended a "keydown"? It is a contest to see which amp is louder, and intelligibility of the audio is almost irrelevant: Two mobiles are set up on a line, they rev the motors and key away at the same time. The winner is the one that is heard above the other. Forget ERP or linearity, it's nothing more than an RF drag race.

Now we all know that ground-wave propogation on 11m sucks almost as bad as VHF and skip is very inconsistent, which is probably why the hams abandoned it years ago. Just like VHF, 11m has a limit as to how much power is practical, yet amps in excess or 1000 watts are commonly used by IOs.

Not only that, but there is a lot of money to be made by making and selling illegal radio equipment. They already know that some people will be violating the laws on the band, so all they need to do is convince them that what they need is a bigger amp. That's not hard to do, even if a bigger amp provides no practial benefit whatsoever, because they will tap the competitive nature of people: "My amp is bigger than YOUR amp!" It works. Just look at how many illegal amps are for sale on the net.

The point is that they don't care about any sort of practical communication, they are only interested in doing whatever gets their rocks off, to the detriment of anyone else using the band, and they will do so while laughing in the face of the US Government. Unless the FCC decides to police the bands, the same thing will happen on MURS and FRS, because that's the way people are.

Hans. That is what 11 Mtr. CB was allegedly designed to do many years ago.
As goes the 11 Mtr. bands, so also will go the MURS frequencies.

I agree with a lot of what you are saying. I just don't think the amplifier issue can be extended to MURS/FRS/GMRS - the fact is, we just aren't seeing it happening.

If I see this kind of nonsense on MURS, I'll DF the fool, and turn 'em in.

Now, I'll have to admit, I live in San Diego, and what I have seen are some Mexicans running over-amplified setups on 154.600, but I'm not going to go down to Mexico with DF-equipment - the TJ cops would just end up busting me down there.

Not here - 2m is highly used both for voice and for data (packet)
and 440 MHz is not far behind.

The metro area is not one of the country's mega-centers but we do
have lots of active hams.

The FRS freqs in our area are not overly busy, but what is heard on them is
a precursor of what is to come. Cussing, arguing, name-calling, et al are
already happening. It will only grow worse and MURS will soon follow suit.
To believe otherwise is foolish and myopic.

It's been around for quite a long time(1996?) - pretty much EVERYONE has one
of these little radios now - there aren't folks with amplifiers abusing
these frequencies. If it hasn't happened by now - it NEVER is gonna happen.

The argument was that people would use AMPLIFIERS on FRS and MURS - this is
absolutely wrong... you KNOW IT, and are trying to CHANGE THE SUBJECT.

Amplifiers are not being used on FRS, GMRS or MURS.

Tell me why 'Joe Average' would even think about setting up
a repeater, or cross banding VHF/UHF. Seems like a very silly
idea to me. Would that repeater system be private, or public
for a fee perhaps?
MURS could fill a need, but please don't tout it as a viable
replacement for amateur radio, it isn't and will never be such.
'Doc

PS - Posting to multiple groups is as moronic as the other idea.

Does anybody know first hand if truckers are presently or going to use MURS
or FRS?

Are you CB/Hamster dealers persuing this avenue and presenting it to
truckers?

If there's more than just a handfull of same company truckers using it, I
would also use it.

Personally, I've always liked the idea of a few fm channels in the VHF/UHF
regions just for truckers.

If there's a migration to MURS by truckers in general, it will be to escape
the present CH19 blatherings of hi power idiots and base stations whose sole
function in life is to cause interference just for the sake of it. I agree
that if it becomes more than a fad, the MURS ch.'s will most likely end up
sounding like the present CB 19 but it should be a long while before that
happens.

5295. Sheep Shearing 101

Newsgroup: rec.radio.cb
Date: 2002-05-25 04:42:36 UTC
From: Richard McCollum <rmccollOMA@worldnet.att.net>
Message-ID: <0DEH8.3183$UT.219851@bgtnsc05-news.ops.worldnet.att.net>
Source record: 125160

While not as absolutely hilarious as the No Name site, the Naughty Dog site at http://mywebpages.comcast.net/naughtydog/ndamps.html offers some interesting insights into how sheep are sheared. The big units, led by the 48 pill are the most insane but for giggles let us pick on a simple-minded 4-2879 array. It purportedly does 500 Bird Watts, 1400 peak watts, draws 50 Amps, and costs $310. That is all we know or think we know so let us attempt a translation.

We have to assume that Birdwatts means real waterheating RMS watts. So 690 watts of DC assuming that 13.8 can be maintained gets us 500 out for 72.5 % efficiency copper loss and all. As 66.67% is the theoretical maximum that can be obtained in linear service and that probably requires operation in liquid hydrogen it is a near-certainty that this bitchkitty is running well into Class C. And at this point the ears twitch.

We must assume that AM is the intended victim here so now comes the question of just what he means by 'peak'. It is no secret that a 100% modulated AM signal has a PEP (which is also an RMS value BTW) of 4 times carrier power. He seems to be saying under the most charitable set of assumptions that he can take a 100% modulated signal and make it 70% in a flash. It would seem easier to bias the thing into linearity, settle for 350 watts of carrier and produce the same audio. And it is after all, audio that is the object of the game even at a keydown. The judges do have to know who you are. His big 48-pill moose seems capable of reducing it to well below 30%.

Now if one wishes to be a little less charitable and assume the carrier is still sitting there looking stupid at 500 watts then the audio drops to 900 from 1500 fully modulated and it becomes 60%. The 48 pill becomes 1500 out of 25.5k or somewhere around 6%. If he actually means peak watts, he is claiming about 10% modulation on the 4-pill and non-existent and quite downward on the moose.

We know for a fact this amp spends its life in saturation mode. So by this time we have a pretty fair bet what is happening and even as claimed it is not pretty.

So much for what we know. What we do not know is what the readings would be with a good 30 MHz Low Pass Filter between the amp and the dummy load. We do not know the audio distortion caused by Class C operation either. So in anything other than a meter reading contest, these things are ridiculous. Here again, if you are planning to win at communication or keydowns it really helps if your output is somewhere in the passband of the receiver.

In fact, I am beginning to believe that one could win a keydown with about 500 watts of simple Double Sideband and let the other idiot demodulate it for the judges. Wouldn't be that hard to phase-lock to his monumental carrier, include a little alternator whine to bury his remaining audio, and blow the roof off of the judging position with yours. Hells Bells, with all the shitty audio no one would even suspect you were running DSB even if it sounded like Donald Duck with a headcold. So does everyone else.

Sounds like fun to me.

Dick N&#65533;BK

Only given to us because nobody else wants it - at the moment.

As soon as somebody comes up with a way to make money out of some or
all of those frequencies, we'll lose them.

Profit first and above all else. Guys..... Remember?

Nick.

Hi Adrian.

There are just a few dealers left in the UK, one or two are on-line with web sites.

I have given some links in another post on here, but there are a few links on my web site.
http://clik.to/brainbuster/
CB links page:
http://www.brainbuster.fsnet.co.uk/links/radlink.html

If you want to search for information on CB, check out DX zone:
http://www.dxzone.com/
They have a radio site search engine and an amazing amount of links to all kinds of radio related sites.

As for "powerful" handhelds, they are all about the same. so get whichever one has the features you want. Any difference in power output will be too small to notice, but if you have a choice of telescopic or "Rubber Duck" antenna... go for the telescopic, it is more efficient.
The Rubber Duck is more useful if going through woods etc, where a larger antenna may get caught in the trees, but they are not the best antenna for distance.
The distance will depend upon your height, local obstructions, etc, as well as the antenna on the unit. If possible, get a handheld which allows an external antenna to be connected. That way, you can connect a mobile or homebase antenna when static... and get about the same range as a standard CB.

On the "uk.rec.radio.cb" group you will also find Doug Knights (Knights CB shop) and Rocket (linked to Truck Kings).
You will find it is a much quieter group than this one, but don't be put off using this one also, it does not claim to be for one country alone.

Brainbuster.

> PS I am in the UK (in case this makes any difference)

Hi Tammy.

As one or two have said, you will find mostly Americans on the
"rec.radio.cb" group. But the group does NOT say it is for America
only, just for CB... so don't be put off using it as well as
"uk.rec.radio.cb"

Oh, and don't pay too much attention to "Aaron Voobner"... he only exists
to cause trouble, he is just one of the others posting with another false
name.
He thinks he is a "net cop", and claims to have software that will tell him
where
someone was born and what they like to eat just by reading the header of a
message.... lol.
I just hope he didn't part with money for it... because it doesn't work.

As for your questions, yes you do need a licence for a CB in the UK... at the
moment. There is talk of dropping the licence as there are so few sold that
the costs of running the system could soon be higher than the income from it.
The licences are dealt with by SSL (Subscription Services Ltd), who are part
of the Post Office.

If you are wanting a decent distance from your systems, I would opt for the
CB sytem. We have 80 channels, 40 that mach EU CBs, and 40 of our own.

You can now buy radios with all 80 channels for little more that a 40 channel

but, if travelling in Europe, only the EU system is legal to use outside of the UK.

CB is fairly quiet now in the UK, so you shouldn't have too much trouble keeping in touch... just make sure that you buy the FM ones, they are best for what you are wanting. The RA site listed below will give you info on how to spot the legal FM ones by the markings.

Try these web sites...
Licensing:
http://www.radiolicencecentre.co.uk/rlc/

CB rules and regulations:
http://www.radio.gov.uk/

CB shop in Lincolnshire:
http://www.users.zetnet.co.uk/knightscb/

This site seems to be popular...
http://www.geocities.com/aarronvoobner/

More links to radio websites:
http://www.dxzone.com/

You will also find more info and radio links on my website.

Brainbuster.

> if ever turn on a CB radio.

Hi Dick.

I must agree that, judging by the amount of time on here, most of the groups regulars cannot have much time left for CB.

Yes, it is mainly a collection of "Yanks", but it is not "yank.rec.radio.cb", there is no rule against DXing on this newsgroup and there are a few UK CBers that watch this group.

So please lighten up on the UK CBers that come on here... or would you prefer an extra "Aaron" or two?
Maybe we could send "Ged" on here from "uk.rec.radio.cb". He reminds me so much of Aaron (the way he avoids the questions and twists people's words to suit his standard reply), they could be related.

Regards

Brainbuster.

No matter what you post, no matter your arguments, the simple unalterable
fact remains that the low life
CBers will soon ruin the MURS frequencies. Common sense and reality will ,
despite the claims of the self-professed intelligentia, eventually rule.
I tend to scoff at those who claim to hold themselves aloof from us
commoners. These self-proclaimed phonies most usually live in a fantasy
world bordered by fantasy and Harry Potter books.
You Muggles are all the same.

"stewart" <horseshoe7@yahoo.com> wrote

> But, in any event, I'm basically comparing MURS to Amateur Technician

Not even close to being comparable. Amateur Technician has incredible
advantages over MURS. (By the way, there is no Technician license limited
to just 2M, so don't try to drag out that red-herring.)

MURS -- 5 specific frequencies, less than 100 Kilohertz of total bandwidth.
Tech -- Millions of frequencies 23,962,000 Kilohertz of total bandwidth.
Advantage Tech 239,620-to-1

MURS -- One band
Tech -- Seventeen bands
Advantage Tech 17-to-1

MURS -- 2W output
Tech -- 1500W output
Advantage Tech 750-to-1

MURS -- Antenna height 20'
Tech -- No antenna height restriction.
Advantage -- Tech

MURS -- FCC certificated radios only. Modifications illegal.
Tech -- Free to use any purchased, homebrewed, or modified radio without FCC
certification.
Advantage -- Tech

MURS -- Operation restricted by US borders.
Tech -- Reciprocal operating agreements with nations all around the globe.
Advantage -- Tech

I could go on and on, but I'm sure you're getting the picture!

Comparing MURS to even the lowest privileged Amateur Radio license is like
comparing a tricycle to a Lamborghini, and the comparison suffers even worse
when you compare MURS to a General or Extra class Amateur Radio license.

I love it when you talk LOUD to try to overcome your lack of rational
persuasion.

Speaking of loud, in the case of MURS (with only 5 channels) the old notion
of 'capture effect' will ensure that I can get through all the other weak
signals on channel. 'Capture effect' is done with power.

Can you say "amplifier"?

I knew you could!

Wait until a couple of good ol' boys get frustrated with the congestion on
those measly 5 little channels, and discover the magic of 'capture effect'
on FM.

Can you say 'afterburner'?

I knew you could!

It's already a daily occurance on FRS, so what makes you think MURS is any different?

Put the FRS frequencies in your scanner (or better yet, get a Talkabout and put it into 'scan' mode.) Drive around for a few days. What do you hear? Profanity, sickos attempting to pick up young children, unlicensed GMRS radios, music, etc. Also quite a few folks now using modified 70cm ham or UHF business band gear illegally on the FRS channels.

Again, what makes you think MURS is going to be any different?

History is on the side of the latter example. Consider:

In the 1970s, we had problems with unlicensed CBers. The FCC's "solution" was to eliminate the license requirement.

In the 1990s, we had problems with unlicensed operators on the VHF marine channels. The FCC's "solution" was to eliminate the license requirement.

Recently, we had problems with unlicensed users on the 151-154Mhz VHF business frequencies. The FCC's "solution" was to eliminate the license requirement and create MURS.

Currently, we have a growing problem with "bubble pack" GMRS radios being mass-marketed as FRS radios. The users are largely unlicensed. What do you think the FCC's "solution" will be?

Amplifiers and/or modified ham and commercial radios most certainly *are* being used on FRS. Take a listen!

If you have a good ear, you can tell the audio difference, due to the stricter deviation requirements of FRS.

I've got a whiz-bang dual bander in my car with enough memory slots to plug in -every- 2m frequency pair and simplex frequencies. And they are programmed in. Then I have a handheld scanner with the same frequencies programmed in. At home I have another scanner with the "popular" repeater and simplex frequencies programmed in.

With all that said, there is very little 2M FM activity in the central Ohio area. Compared to Omaha NE is the mid-late 80's, its dead.

If both users don't mind wandering around with 11 element yagis
nailed to their hats, and *if* they don't mind having to keep them
continuously pointed at each other while moving, then they might be
able to match the performace of a good 2m mobile rig.

Some of us like to talk more than a few miles away.

Relevance???? I have a ham license, I am working on a 2.4ghz antenna, and a 160m antenna. I will look at and try if possible any new technology on one end and restore/use BA gear on the other. I love telecommunications. My ham ticket is relevant to me because I am an experimenter and an operator. I use 802.11b for home networking, just another technology. MURS is interesting. Do I see it as a threat to HR? No....Cynics who want to prophesize the demise of HR are the real threat. Do something, contribute to the science of radio, teach others.

If the AR service is irrelevant to you......quit.

Like Bob Dole, as he exited public life, sponsored a bill allowing 100% of
the radio/tv media in any metropolitan area to be owned by one person.

Why would he do that?

Horseshoe, you're going to have to help us here.

We need you to explain the difference between useful ERP and "virtually useless' ERP.

On one hand you say higher ERP is VIRTUALLY USELESS ---

> So please, do try to feed me a bunch of happy horsecrap about using amps on
> VHF/UHF - it is VIRTUALLY USELESS.

But on another hand you applaud the lifting of ERP limits ---

> This effectively raises the ERP limit to about 10W for omni base
> stations, and about 50W with a directional beam antenna.

Which kind of ERP is useful?

I can imagine ol' Billy Bob buying hisself a 14dB gain antenna, string some lowloss coax, and exclaiming "Sheeeett, ah'm putting me an ERP of 50W over toward ol' Ellie Mae's house!."

Then I can imagine Ellie Mae hollerin' back "Yeah, but I called 1-800-HAM-AMPS and got me one of them thar Mirage B-320G bricks, and ah'm puttin' me an ERP of 200W in every durn direction! That be making me about 6dB louder'n ya'll in every direction!"

Well, ol' Billy Bob's mammy din't raise no idjits. He slaps hisself on the forehaid and esclaims "Ah'll jess get me one of them thar bricks too -- lessee, my antenna done gave me 14dB, and that thar brick of Ellie Mae's is givin' 20dB -- that be 'bout 34dB -- holy sheeeeeeeitt, my ERP done be 'bout 5,000W -- hell's bell's -- I ***OWN*** them thar MURS channels fer a hunnert miles around old Mount Baldy!"

Interesting, Phil. I thought the general consensus was that the FCC does NOT "reward" illegal behavior by legalizing it.

>Two methods of Rules changes - go through the procedures starting
> with a Petition for Rulemaking,

You mean kind of like RM-9807? Then the above statement no longer applies.

Bootleg CBers got to call their equipment "10 meter CW" now? Good God,
how pathetic. (Just like you, Scott)

Stewart, you seem to think there isn't a point. The point is about learning. This served the United States very well back in 1968 (I believe it was 1968 - within a year). The Coast Guard lost a big tower on Saipan (did I get this right this time, Hans?). The Navy was having a big problem copying the hams they sent over to get communications back up (the disaster was caused by a typhoon). I was in the shack at KG6AAY on NavCommSta Guam and heard the goings on. I called the signs 'sparkplug, sparkplug1, this is KG6AAY standing by'. The net result was that the AMATEUR RADIO OPERATORS restored communications. For a number of days, we were the ONLY communications to that island. Hans was one of the guys that went over to Saipan. This has happened countless times, you simply may not have heard about it. One does not learn simply by talking on the radio. The hobby is much richer than you can ever imagine (and far bigger than I know about as well). It is a valuable resource to this country whether you or I believe it or not.

Apparently the government thinks being a "radio outlaw" is serious
enough to warrant a $13,500 NAL. So radio piracy is definitely NOT
comparable to jaywalking, speeding 56 in a 55, etc. no matter HOW much
you try and convince people otherwise.

Let me refresh your memory. The discussion was about noise caused from
skip, to which you responded:

"...not all DX is reciprocal inkind or magnitude."

Now what does that mean if not saying that the -reciprocity- of skip
is a factor in band noise? I'm sure most will agree that skip causes
noise, but how does one-way skip affect the noise level differently
than two-way skip? That's what you said, Randy, like it or not. Now
quit avoiding the question and answer it.

I guess he thinks one-way skip creates only half as much noise as
two-way skip.

It means what it says Aaron/Sparky. How fucking dense are you? It has
nothing to do with causing more or less interference with regard to
reciprocity.

No. A stock one does 25 watts SSB. With a replaced final you can get
50 - 60 watts, sometimes a bit more, but not 100 watts. Unless you're
talking Voob watts, of course; then anything goes!

Except for comic effect (i.e. Keyclown Watts) where did I ever
misrepresent the output of those phoney export radios?

But I get the idea. You're trying to make it seem like linears, mauls,
tweaked and peaked radios, etc. don't actually exist except in my
imagination. LOL, go for it!

Gosh Twist, from these quips you come off like the average rural good ole boy rather than the psychotic paranoid anarchist we often see in these threads. If I didn't think you'd "accidentally" discharge a load of buckshot at me, I'd make a point to come by your place just to visit and hang out.

5357. CB and Radar Detector on Motorcycle

Newsgroup: rec.radio.cb
Date: 2002-05-25 22:42:56 UTC
From: diemuse@hiwaay.net
Message-ID: <d032b7b8.0205251442.7fd723b3@posting.google.com>
Source record: 125222

Ok here's my question.

I would like to run my CB (Cobra HH) and radar detector (Passport 8500) into the same helmet headset at the same time. Both devices work fine with the headset by themselves, but I would like to be able to use them both at the same time. Will the signal coming out the radar detector hurt the CB or vise versa.

I plan to just spice into the headset, no special devices.

Regards,

John

Good point, there are enough examples of that right here on this news group.

> was doomed for failure from the outset. The MURS frequencies will meet the
> same fate.

Maybe or maybe not. The Ham Fox hunters will have a field day tracking down the bozos, on VHF it is much harder to hide one's activities and location. The real concern is not the running of power, but the fact that the idiots who do the above will find it almost irresistible to dial their modified 2m rigs down to the Ham 2m band to take advantage of the nation wide system of repeaters, some linked in to multistate coverage systems, for a quick QSO with other like minded pirate operators. The reason they would even consider dropping down to the 2m Ham band is due to the fact that many businesses still use the now unlicensed MURS frequencies, and likely will continue to do so. This could make the current problem with intruders on 10m and 12m look small.

Tell that to Mirage amps, RF Concepts, Beko Elektronik,etc. They do a tidy amount of business selling V/UHF amps, and they DO make a difference on those bands with or without skip conditions. You'll be hard pressed to find a serious V/UHF operator that does not own an amplifier. I own and use several myself.

No they don't Randy. They do make dual band 2m, 70cm FM only amps, and only two models at that. The BD-35, which I use for my dual band HT, and the higher power version the BD-38-G. Both amps are for FM use only, and the output drops off real fast outside of the Ham Bands they are tuned to operate on.

Actually Leland, I'm sure they will work fine for both bands with minor
retuning. And both bands are mainly FM. I've used business band(150-175Mhz)
amps as great HT amps for 2 meters with no problems.

If going the ebay route. Find a good quality Motorola (or Bendix/King, those are great too.) external speaker. I have several for different applications, including an amplified one that has rubber gaskets inside of the speaker...I guess it is somewhat weather resistant. Some people say Motorola is hype, and they may or may not be, but they last forever, and sound great! (expensive new, though).

You might look at some of the Cobra High Gear speakers. I have heard they are pretty good. I am sure others will offer good suggestions, too.

Cheers!

we recently had our monthly meeting of the Texans United For Freebanding / Special Ham (frequency) Interference Team. We are an organisation that is dedicated to increasing usage of the free band,and creating as much rf hash and trash as possible by promoting the latest technical innovations.we brought you such innovations as 1) clipping audio limiters 2) wide band linear amplifiers 3) roger beeps and noise toys. 4) echo (on side band) :) 5) turning up d-104 mikes way beyond their optimum setting.6)installing the loudest cooling fans available for our home brew linear amps.(this works exceptionally well in conjunction with#5). at our latest meeting the focus was upon discovering new and innovative ways to make radios and amps even more obnoxious and irritating to our other brothers in the spectrum. sadly,we were unable to invent any fresh mischief at this latest meeting,but this was probably due to the fact that the keg of "pearl lite" arrived earlier than usual,and the discussion deteriorated into how most of the civil rights laws have virtually eliminated our constitutional right to freedom of association/assembly, and how "sombody" in congress better put a short leash upon the A.T.F. (another federal agency like the f.c.c.,that brought you such high moments as "waco and ruby ridge") well thats it from far west texas, where the women are brown,and the beer is cold. see yah.....

I'll ship you all the boat anchors you want - at YOUR EXPENSE... just
make a deposit via Paypal for everything you want :)

Let's start with a couple of old, and very large, MOCOM-70s that I
converted to run digital on 50.14 in the early 90's, OK? The relays
are still good on the beasts. However, you should be aware that they
DO have a propensity to set car alarms off when they are in need of a
tuneup. I'll throw in the service manual if you buy both. Shipping
and Handling charge for each radio - $50.

Stewart - N0MHS

P.S. I hope you have a good Service Monitor - you are going to need
it.

5374. Astatic 636L microphone opinion.

Newsgroup: rec.radio.cb
Date: 2002-05-26 03:46:44 UTC
From: Mayor <nonelwishtodisclose@nospam.none.ok?>

Source record: 125239

I tell you what. I just bought me an Astatic 636L mic. for my Cobra 25LTD Classic, and that thing is an awesome microphone. I don't really know exactly what type it is, though I know it is not a power mic. I think it is a noise cancelling microphone. Regardless, this is the mic. many of my friends and acquaintances suggested I get, so I did. I have gotten good audio reports since I have had the mic., and it seems to be built very well. I don't like microphones that are too light, and this one fits the bill very nicely...It has a little bit of weight behind it, yet not too heavy, as opposed to a stock mic, which seems too light to me. Plus, the cord that is connected to it is the type that seems to act a bit better in cold weather. You know what I mean? It always seems like with the other microphone cords (the ones that are a bit thicker and have a more glossy finish) they don't contract or coil up as easy. Not that this is a bad thing, though. It just seems that this type of cord tends to crack easier, at least in my experience. I would have to give this microphone an A+. Only my opinion, though.

The packaging says it is made in the U.S.A., but the switch inside of the microphone says "Mexico". I guess if they mean that the microphone is "assembled" in the U.S., that may be true, but certainly what few parts this mic. has, aren't actually made in the states, or at least the actual switch part of it. By the by, are there any CB radio makers in the U.S.A. anymore? I haven't heard of any recently, but you never know. Thanks.

Where do you come up with such NONSENSE - don't you have any concept
of reality?

Unless used in conjunction with towers, 100W amps are virtually
useless to Joe Average on VHF... and don't start with the tropo
ducting, Sporadic-E, and EME crap... try to use your BRAIN, man.

This is why amps are not going to be used on VHF MURS and have never
been used on UHF GMRS/FRS - when are you folks going to tune into
reality, and quit trying to extrapolate your HATE and knowledge of 11m
CB to VHF/UHF services - it is PLAIN IGNORANCE I tell you.

Steewart - N0MHS

Stewart, let's cut the nonsense and I'll ask a serious question - why do you seem to believe that amateur radio stopped with spark gap in the early 1900's? I've got news for you - the latest and greatest in cb could be cut to ribbons with amateur technology in the 60s - I know, I was there. What is it that you do not understand? My 440 MHz handheld runs only 6 aa alkaline batteries, yet is capable of using (not just opening, USING) repeaters 100 miles away. I've talked with guys on handhelds up in Watertown, NY - a good long ways from here - on the handheld. And this is old technology! You'd best brush up on PSK-31 and other modes before you continue to insert your foot in your mouth. Boat anchors exist everywhere. Get back on subject. Just exactly where do you think that anything without a license (including CB) has more to offer than something with a license? Please be specific.

Thanks & 73 from Rochester, NY
Jim

ps - I talked with Norm, VK2NP, in Brisbane, Australia, many many times using RTTY. Yep, old technology. Did it in the 60s. Go ahead and tell me how fantastic the internet is. I used to type 90 wpm on a 100 wpm machine in the navy and could keep the old 60 wpm machine in the shack going without interruption. Ok, you can cut and paste 3,000 wpm with the internet. How fast can you get information out on your own without simply copying someone else's information?

pps - the amateur scene is considerably faster than you may suspect.

> Can you say "amplifier"?
>
> I knew you could!

Nobody is using illegal amplifiers on GMRS/FRS - why? Because it
makes no pratical sense. If the MURS/FRS/GMRS channels get so crowded
that people need to resort to amplifiers for the reason you cited -
then it is simply time for the FCC to add more channels to these
services... didn't think about that one, did you?

You see, you are still trapped in trying to equate 11m CB with
FRS/GMRS/MURS - and it just doesn't work. 11m CB might be "frequency
constrained" - but, with channel narrowization, there are PLENTY OF
UNUSED FREQUENCIES on VHF/UHF for small footprint public services...
besides, if these folks are putting it to such good use, then the hams
shouldn't mind giving up a few VHF/UHF frequencies too, right? Try
scanning them sometime - they are VIRTUALLY UNUSED.

>> directions to a trucker in Texas? You aren't making any sense, Tim,
>> but that's normal.

BTW, I totally missed Tim contradicting himself (first he says skip is 20dB over S9, but then he says he doesn't experience excessive noise). Shame on me.

Back to the subject. In the post I asked Tim that if skip was as bad as he claimed it was then why aren't truckers getting driving directions from CBers in skipland. Is that what you called "conjecture"? And then you say the reason why such occurances DO NOT happen is because "not all DX is reciprocal in kind or magnitude". But I AGREE that such examples don't happen (except maybe for freak occurances). In fact, that was my point -- skip isn't as prevalent as Tim would like you to believe.

But then you took it one step beyond reason by saying that since skip lacks reciprocity it prevents two-way communication. Now of course you couldn't mean THAT; after all, thousands of people talk skip both ways every day.

The only possible conclusion left is that your statement refers to the only other topic of my post, and therefore must mean that band noise is somehow affected by the reciprocity of skip.

So now it's time for you to back up your BS. No more backpedalling, stalling, or imaginary killfiles, Randy. Answer the question: How does one-way skip cause more or less band noise than two-way skip? And if that isn't what you meant to say, explain what it is you DID mean to say.

Talk about saving bandwidth. What about 27 mhz? I don't know if it's
funny or sad. Dick's technical deconstruction of the keyclown art is
highly accurate, yet misses the mark in some significant ways. Were
the keyclowns to develop more technically elegant methods of trashing
the band, one is led to believe that Dick just might join in.
Keyclowns are like street gangs, they equate brutality with
competition. The legitimate world offers them no respect for their
achievements (producing wideband harmonics and distortion via
illegally high power levels from a mobile platform is not something
the IEEE considers a technical innovation), so they look to each other
for validation. I say they deserve neither respect nor validation for
their single-handed de-evolution of CB radio.

For crying out loud - this was 35 years ago.

The world has totally changed - everyone has cell phones now(except
me). The govt. is far more prepared to handle emergency comms these
days. I'm sorry to say, but I think you are living in the past.

But - if you must know, I don't believe ham radio is completely
pointless yet... but it is heading in that direction.

You know what - I'm starting to think that's why the FCC goes ahead
and simply allows all these CBers to have illegal amps - it is a
valuable National Resource :^) Could come in quite useful in an
emergency.

Is the helmet headset stereo? If so, just splice one onto the left channel, and one onto the right channel.... Personally, I can't see either hurting the other, and neither has a very high output power as far as sound goes. Just to be on the safe side however, I'd do what I suggested if your helmet is set up that way....

No arguments wrt severity...however the frequency (No pun intended) is
suspect. Your Glorious commission appears to be AWOL. Your right,
Aaron. "Radio piracy")At least wrt 11-meters.) is definitely NOT
comparable to jaywalking, speeding, etc...there is far more
enforcement of the latter.

As Russ Meyer narrates..."small town, USA..." I'm sure it happens
everywhere, but it's just not the epidemic that some claim to exist.
I'm not a great fan of those who use profanity or run unreasonably
excessive power, but you pick your spots and deal with them as best
you can. Gee, sorta like real life...ain't it?

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

One more time Aaron/Sparky. I will type really slow, so that maybe you will
understand. What I said is what is written. Stop reading things into it. It
means:

Not all stations you can hear, hear you, and if heard(or not), the magnitude
of the received signal can vary greatly.

If need be, I might be able to make a simple picture for you with MSPaint,
with a circle for Earth and pretty little lines for radio waves to help
illustrate how this works. Of course, claiming as you do, the title of
broadcast engineer, I would suspect you would have grasped the theory by
now. Of course you have. You just enjoy twisting words when you argue a

losing battle.

You know what's funny? You act sane for a bit, so I let you enjoy the freedom of my monitor for a bit. But once again, Aaron sticks his fingers in your back and starts moving your mouth again. Please try to remember who you are, or at least keep on the meds schedule. It becomes tiresome to keep having to roll back up to see whether Aaron or Sparky is the moniker you are using.

They were simple 5W in 35-40W out types. Just little bricks. I don't
remember the brand, but they used to be common at hamfests and tailgates. Of
course, this was before the price dropped so much on higher power 2 meter
gear, and made it more affordable(read easier to get the wife to accept).
None were name brands like Motorola, but nonetheless, they still worked
well.

5393. Westgate?

That's Voobner...get it straight! Search USENET and you'll find hundreds, if not thousands, of loyal fans of Aaron's repetitive posts. Scour the FCC enforcement logs and witness tens upon hundreds of heroic enforcement actions directed at Citizen's Band and Freeband operators in an effort to make rf like clean and wholesome once more. C'mon Bert, can't you see the conspiracy Aaron's alluding to? Don't let your common sense and past experience get in the way. Dream the conspiracy, see the conspiracy...BE the conspiracy! :-p

>To believe otherwise is foolish and myopic.

FRS has been with us for a few years already with radios available
that anyone could afford. How long will it be before FRS is totally
overrun by nonsense, 20 to 30 years?

MURS activity in my area has dropped since it first became legal. I
expect to hear a small increase in use when MURS specific radios
become available but I don't expect to hear the armageddon that many
are claiming.

Most who will be attracted to MURS will not want to put the effort
into a monster station (which would do little good anyway.) If they
want greater range they'll stick with their cell phones.

I have yet to hear an echo box on FRS.

Roger beeps were initiated by radio manufacturers, not users of FRS
radios.

If you hear roger beeps on MURS you can thank the manufacturers.

The one real live problem I've heard about on MURS (as far as
non-certified radios) was with Ham operators using their 2m radios on
MURS.

The fox hunts will turn up some of their own people.

Hey All-

I have an excellent condition Galaxy DX99V for sale. It has all 8 Bands, and 4 transmission modes, AM/FM/LSB/USB, 10kHz switch, Roger Beep, Echo, Robot Voice, Voice Changer, Freq. Counter, Variable Power, dual finals, and the clarifier slides (factory default). This unit is stock, and the only mod done was the frequency mod. Everything is in excellent condition, even the retail box.

This is a great radio, why settle for a domestic radio with no features. Asking $270 + shipping. I accept paypal, and MO only.

Thanks!
-CJ

When is soon? CBers like to talk skip. Do you expect a particularly
odd sun cycle that will allow skip on VHF?

The only people who will come close to causing problems on MURS are
those who will pay less than $30 for their radio and those radios will
not have the range to bother anyone.

Why would anyone give up all their high powered CB gear that talks all
over the world for more expensive equipment that might possibly talk
to the next town regardless of power?

You raise an interesting question. We Myers-Briggs ENTPs tend to admire competance but prefer options to rigidity. One reason I am never too likely to buy you a beer. As outlawry goes CB is really peanuts and pretty juvenile at that. Keydowns are not gangbangs, they are what happens when the gendarmes lean on loud stereos or shuting down the local master mechanic in a drag race.

Of course they look at each other for validiation, that's why country clubs exist. Hang around the locker room and you will be amazed how many lawyers carry tape measures in their jockstraps -- goes with the territory. And to be a sucessful car dealer appears to require a manhood problem. Boys and their toys as the prophet says.

The gung-ho shall inherit the earth. They deserve it.

The Velvet Codpiece
- tell no little lies -

Mike,

Are you suggesting that MURS operators might stage a "Boston Tea Party" to
acquire additional channels?

Excellent response. How soon some forget the will of the people. After all, it IS still the "Citizen's Band," is it not?

Copied from the ARnewsline:

****
If nothing else, the 2002 Dayton Hamvention was filled with surprises.
Surprises like this:

"I just flat do not believe that. What are the odd? The top three
prizes and people without calls win them? There's a lot of guys
walking out of here with their heart down in their shoe soles."

That's right. The top three prizes -- three top line ham radio
stations and this year they were won by non hams. And before some of
you channel cops start saying that non hams cannot legally win ham
gear guess again. The law is on their side. Not only did they win
it. They went home with it.

****
Geez, you mean it's legal to own ham gear?.............. I got mine.

> I just hope he didn't part with money for it... because it doesn't work.
===

But then again, his map reading and Geography skills (or lack of them) also
need a bit of work.

Draw a circle from Birmingham that covers Knights location (North Lincs, near
Scunthorpe, Humberside), and the area within that distance of Birmingham goes
from Basingstoke, Hants (South of England) to Bradford / Leeds / Halifax,
Yorkshire (North of England)... and from Aberystwyth, Dyfed (West coast
of Wales) to Cambridge, Cambs (East of England).
That covers most of England and Wales.

So there are many other CB shops much nearer to Birmingham than Knights is,
such as:
CB Shack - http://www.cb-shack.com/
Even this one in Hertfordshire is nearer to Birmingham than Knights is:
Truck Kings - http://www.truck-king.co.uk/
There will be many more (mainly small shops), but the above are the ones
known throughout the UK with Web sites.

If Aaron can throw a stone over that distance, then he is on the wrong
newsgroup...
clari.sports.olympic
clari.web.sports.olympic
rec.sport.olympics

Or maybe more fitting...
git.olympics.volunteer
Let's face it, he volunteers to be the "Old Git" on this group.

So, why settle for being just an "Old Git", when he could be an olympic
"tosser".

Brainbuster.

> No BrainsBusted , my header doesnt change at all it is the exact same
> everytime, just the nic and or contact info changes
===

That is a contradiction, they are part or the header... dumbass.
So, if the contact details change, then the header is no longer exactly
the same.... dumbass.
The contact info is how my filter decides what to block... dumbass.

===
> If you were as smart as you lead us to believe you could
> figure out that OE will allow you to block domains,
===

Oh yes, I can block anything at "aol.com"... but that blocks EVERYONE with an
AOL address.
AND... it only blocks your whiney ass until you change it to "aol.comm", then
"aol.commm",
then "aol.comSpam", etc... as you so often do.

You know this, or you would not keep changing it, why did you change it to
reply to my message?
Simple... you know that will get through filters and you are talking from the
incorrect orifice, as always.

===
> so do me a favor and block my domain
===

The "aol.com" domain is not *yours*... you do not own the domain name. So,
you do us all a
favour, take your head out your ass and view the real world for a change.

If I block every domain you keep using in your header, I will block everyone else.
And then you will just add an extra letter on the end to get through, while genuine posters will still be blocked.

I have blocked some domain names... but they are the anon. type designed to be used by Trolls (like "xganon.com")... not ISPs with over 33 million members. Bit of an overkill, blocking 33 million people for the sake of one who is not even using AOL to post the messages.

===
> unless you want to be like Landshark and
> Randy and pretend everyone is killfiled and reply to them
> anyhow. You choose to reply to me whatever my name is so what does that
> tell me.
===

First of all, you replied to my message... a message which did NOT mention you. And you even changed your contact details to make sure I noticed you... what does that tell us about you?
But I was merely replying to your message which was directed at me.

You keep changing your name, e-mail address and domain name in your header... that tells us that you KNOW you ARE being blocked. If you really thought otherwise, you would not feel the need to keep bypassing the filters.

Every time you change your details in the header, it is proof that you know that we put you in the killfile, proof that you crave our attention and proof that you realise that very few people will read your messages if you give them the choice.

Try an experiment... keep one e-mail address for the next year... see if I even notice your posts. Bet ya wont do it, you know I never noticed you until you changed it just to get round my filter, that's why you changed it. You also know you will be in the killfiles and just talking to yourself.

Once upon a time, there was a non-conforming sparrow who decided not to fly south for the winter.

However, soon the weather turned so cold that he reluctantly started to fly south.
In a short time, ice began to form on his wings and he fell to earth in a barnyard, almost frozen.

A cow passed by and crapped on the little sparrow. The sparrow thought it was the end.
But, the manure warmed him and defrosted his wings. Warm and happy, able to breathe,
he started to sing. Just then a large cat came by and, hearing the chirping, investigated the sounds.
The cat cleared away the manure, found the chirping bird and promptly ate him.

The moral of the story:
1. Everyone who craps on you is not necessarily your enemy.
2. Everyone who gets you out of the crap is not necessarily your friend.
3. And, if you're warm and happy in a pile of crap, keep your mouth shut.

Brainbuster.

I have some of them linked from my site, but there are some that I had not
heard of.
I have seen TKs site... all two pages of it. It could be rather off-putting
for
people who do not know them, and so get the wrong impression of a
small outfit with nothing much to sell.

Hey, Rocket... do you know if there are plans to add content to the site?
Maybe price lists, info, etc. I got fed up with looking, just to get the
same
thing every time.

I understand exactly what reciprocity means. But you still haven't
answered the question: What does that have to do with the topic of the
discussion -- noise on the band?

You either didn't understand the discussion or you couldn't comprehend
the question. In case of the latter, I'll draw YOU a picture: Draw a
circle for the Earth and put 10,000 signal sources all around it, some
larger and some smaller. Now, just because station Q can hear station
Z but station Z can't hear station Q, how does that effect the noise
at station B? Is that simple enough for you to understand? If not,
then you didn't even understand what you wrote.

Stewart, I'll be dipped. You missed the point again. Too bad you were not (obviously) in NYC on 9/11. Go ahead, use your cell phone - IF you can. Amateur radio certainly can't provide the huge infrastructure that commercial concerns can, BUT ...

Beyond that, amateur radio SHOULD be about learning. I've tried to argue that what is being done at my employer's place for data collection is not the way to do it. I think I'll simply leave the latest issue of QST lying around the plant. Maybe someone will read the article on hidden packet stations and come to the realization that what I've been saying for two years is correct. This does relate to amateur radio - do you think we are all still using spark gap and cw or what? I've got news for you - things DO change, but PRINCIPALS and CONCEPTS still apply. 500 volts from that boat anchor can still kill you, despite the fact it was built 50 years ago. Internet, packet, amateur radio - they all have some common grounds. Allowing a CBer a 10,000 watt amplifier will only add to problems, not provide solutions. Your problem is very common - I see it at work every day. This is going to get REALLY funny. I can now retire (I hit 55 on the 21st). You see, many people at work have the same perceptions you do. Once my retirement papers are signed (which won't be for a few more years yet - I want more pension), I will be demonstrating an interesting program. I did it once before with the old Texas Instruments ladder controllers. I wanted to do it 6 years ago (but the young very important folks said - it won't work, you won't have all of the CPU instructions in it - listen to this, Bill Gates!). I can program any of the Allen-Bradley SLCs in under 15 minutes with nothing but the I/O listings. It will be far more efficient than the code they currently use (a 35 ms scan time will be brought down to well under 5 ms). Unfortunatly, I had to sign an agreement with my employer which forbids me to work for a competitor for 2 years - but this was done on MY computer AT HOME with MY software. It has been costing them over $200,000.00 per year for the last 5 years. I will demonstrate it. It will automatically place an OEM LOCK on the program in the controller at which point they can alway leave it in or put their old software back into the controller. My software has a copywrite. Tough ...

BWHAhahahahah

What is pointless is the attitude you and many others display. It is costing FAR more than you will ever have a clue.

Here's to 'pointless' amateur radio!

Granted keyclowns are not the Crips & Bloods. But would CB be better or worse off without their "contribution"?

>Of course they look at each other for validiation, that's why
>country clubs exist. Hang around the locker room and you will be
>amazed how many lawyers carry tape measures in their jockstraps
>-- goes with the territory. And to be a sucessful car dealer
>appears to require a manhood
>problem. Boys and their toys as the prophet says.

Agreed that human nature engenders competition. But all the examples you gave (golf, lawyers, car dealers) were perfectly legal professions and activities. It's true, most people in the society channel their competitive nature toward non-criminal pursuits. Why can't the keyclowns? Why are they so special?

>The gung-ho shall inherit the earth. They deserve it.

So, for example when N8 decided that the newsgroup was "all about competition" and flood-posted against the keyclowns, you admired what he did, right?

That was done years ago and we now have a legal service that will
continue to operate with very few problems for years.

Additional channels are not needed and will probably not be needed for
some time.

Mike

Randy.

Just because someone else in this world recognizes the hypocrisy of
illegal CBers does not automatically mean they are me, Aaron Voobner.

For example, Dave Hall shares a few of my beliefs. Does that mean I am
him too? How about Leland Scott? Or Paul K5PF? Or Dwight Stuart? Or
Jeffrey in Hawaii? Or JJ? Or George?

How can these people all be ME? Am I the sole practitioner of an
enormously expensive and labor-intensive conspiracy?

stewart,
The likelihood of more channels being added to
FRS/MURS/GMRS is very small. If they turn into a
'FUBAR' like other services have, it's a more likely
possibility that they will be deregulated and enforcement
turned over to local government agencies. Come to
think of it, with no license requirements for FRS, it
already falls under PL-106-521. Oh ho!

If you look in the archives you'll see that N8's 'floods' were in response to some ongoing feuds with his opposition. Anyhow, according to Dick, he is to be admired because he was 'gung-ho' and folowed his competitive urge to 'top' his competition (even when it negatively effected EVERYONE in the process). How is this so different from what the keyclowns do on CB?

With a federal moratorium on internet sales tax UNLESS item is being shipped within the state being bought from, collecting sales tax on a NONDOMESTIC sale is just stealing!
Sales tax on sales within the state when bought via internet is QUESTIONABLE at best but prudent none the less.

Very true as long as the operator has a modicum of technical
ubderstnding and/or an advisor/role model who does.

When the above folks are of the "I got more watts than you have"
mindset, all bets are off.

>Nobody is using illegal amplifiers on GMRS/FRS - why? Because it
>makes no pratical sense.

It makes no sense to someone like us who has some technical
background. It would appear to make a lot of sense to someone whose
extent of technical knowlesge is limited to or focussed on figuring
that 100 watts has GOT to be better than 4 watts because that's what
happens on 11m and anyway it's more watts.

Consider that I do get greater range (can hit repeater or fixed
stations further away) with my 50 w 2-m rig than when I crank it
down to 10 watts. It almost makes the ",ore watts is better"
argument.

I've been on 2-m proving that for the last 40 years.....

It all boils down to whether the use of amplifiers to increase the
power output of a MURS or FRS station is legal.

It is not.

A regulatory policy decision, not a technical decision.

The reason is that The Congress does not want to fund the FCC
field enforcement function at a proper level. Put the proper
number of agents on the street (about 10-15 times what is there now
is a good start) and nrvrddstu mstvchingotfrtd yo yhr Justice
Department to stop kissing off such cases and you will see a marked
difference/cleanup of all such problems.

The last people that the gov'mint would entrust backuo
communications to is the "I have a good afterburner" crowd.

See my earlier posting about the Boston Tea Party. It had nothing to
do with taxation and the King. It had everything to do with
protecting something that today would be shut down umder the RICO
laws and the "Patriots" sent to Lompoc or Butner FCIs.

Only if the emergency did not require ACTUAL communication. CBers with
illegal amps have perfected the art of "one-way communication". Thier
technology (if you can call it that) is all concentrated on one goal:
transmitting the loudest possible signal. The receiving side of the
equation (DSP filters, narrow IF filters, audio passband filters,
directional antennas, etc) is totally ignored because it isn't
relevant to them.

The quickest method is to start building cb radios running 1000 watts plus (am only, of course) and assign them frequencies all over the VHF television band. Then we'll find out about the will of the people. I see no problems with that.

Hi all,

I currently have a (under 2-Years old) Uniden PC122XL SSB transceiver with an Astatic 575-M6 Mic... Anyways, I was wondering if it is normal for the radio to/when transmitting (recently), the signal level to drop anywhere's from 2 - 3 bars?

For what it is worth, SWR is/shows normal, & the mic's battery is new (replaced 3 weeks ago).

We already had a "VX-5 Tea Party"... but now that all the old Part 90
radios have been made compliant - and all new radios only have to meet
Part 95 regs - the citizenry has been appeased.

Yes - I think the "Boston Tea Party" analogy is a DAMN good one. I
wouldn't look for anything else like this to happen for a couple more
years, however. Right now, we are going to have to fill up the lower
three MURS channels.

Could we see consumer MURS radios by THIS Christmas? I hope so - and I
also hope they come with removable antennas(BNC connectors preferred).

I'd love to see a T7200 clone for MURS(with Wx), but with a BIG
removable antenna, and FULL 2W TPO on all 5 channels. Even if it does
cost $129 - I'd buy a pair... eventually the price will drop below
$100 at Wal-Mart...

There really wasn't a correct Ping. It was a mistake that the engineers let slide. The ping was caused by the receivers still having some hi voltage remaining once the tx relay came on. If you want the ping then keep the mic gain up or at least close to the speaker. Please dont increase the value of the filter caps in the rcvr to increase the length of time the ping remains.

> do you seem to believe that amateur radio stopped with spark gap in the
> early 1900's?

I don't - you misinterpreted the point of my post.

What I'm saying is that Amateur Radio has slowly become less relevant
in the last 10 years, but the trend is accelerating. As this trend
continues, the ARS is losing it's PURPOSE... this is especially true
on the VHF/UHF bands, whose use has dwindled to the point that they
are VIRTUALLY UNUSED. Even 2m has no more than modest activity -
other than a few high-level repeaters, and an occasional simplex or
packet QSO, or some folks doing EME... NADA.

Why not open up 1.25M for a new NoCode Novice Class? At least then we
could start getting families/friends/collegues involved with Amateur
Radio. Otherwise, why not just let the public use these frequencies?
They aren't being used for anything.

Stewart - N0MHS

Good news, Stewart! I just checked, and 222-225MHz is open to NoCode
licensees. I think it happened back in about 1991. And 219-220MHz is
available for high speed data links up to 100KHz wide. Yes, to NoCode
licensees. Go do something cool!

Amateur Radio has changed. That is a fact. The reason it
changed, is that you can't build a radio cheaper than you can buy it.

All those Hams who could build a radio, are dead and gone.

What that leaves, is the Hams who like to interface things to a
pre-built radio. There is a lot of experimentation and fun in doing
those projects.

Radio is not the fascinating thing it was in the 60's and before.
Radio is boring since the invention of the CD. Not many people
stay up all night to here a far away AM station like we did as kids.

Radio is an appliance to Americans, not as much a hobby anymore.

The numbers will never again reach what there was at the peak
of Ham radio. The commercialization of RF to one or two
companies in America will continue, and Ham radio will go to
the same place that model railroaders, and slot car racing went.

Hobbies die, and people die. MURS is still-born.

Well, everything changes. Vinyl records are gone, but does it mean the music industry is gone? Are musicians gone? Likewise, amateur radio has changed, but it continues and is quite relevant today. If you understand packet, you won't have any problem understanding how many devices communicate (the first foreign language is difficult; others become easier). You mention the repeaters. Heck, we have a pack of 'em here in Rochester, NY. No, they aren't busy a good deal of the time (like at 3:00 am local time - but I've had interesting chats at those odd hours of the morning too, so they aren't dead even then). The purpose SHOULD be about learning. Just opening up frequencies for unlicensed use won't further learning. There are already a good number of frequencies for unlicensed use (even for wireless local area networks). One of the repeaters here locally is connected to several ports connecting 10, 6, and 2 meters as well as 220 and 440 MHz. I've had chats with stations in England and Australia over these (no, not internet linking - all rf paths courtesy of that 10 meter port). That said, this was just a simply recreation at the time. The learning is what pays off for everyone. Most hams have never been involved in an emergency. The point is that many are trained and could offer assistance
if needed. I guess the best I can offer is this - hospitals have much more equipment and doctors available; therefore we should eliminate ambulances. Right? No, amateurs cannot compete with the huge infrastructure that commercial firms have provided (I've stated that earlier); but some communications are better than none. Don't bet the farm that adding another 10 million people using FRS, CB, MURS, or whatever else that doesn't require a license is likely to help in a real emergency where telephones and power are out for many miles around.

73 from Rochester, NY
Jim

ps - there are a ton of bands for codeless techs. That is fine. If you suggest they should be open license free, then recheck this post.

People who died 10 years ago, are still listed as Hams.
Don't believe the numbers.

The other statistic tool you must know about, is per-Capita. That is,
how many Hams per 100,000 Americans in age groups like
9-12, 13-16, 17-20, 21-30, 31-40, 41-50, 51-60, 61-70, 71-80?

Have those gone up? No, they've gone down.

Thanks, for the info, Bob. I also found a fairly comprehensive answer in a Browning forum at
http://pub45.bravenet.com/forum/show.asp?usernum=3808175660

It suggests checking the voltage on resister R54 (mine was fine) and checking to make sure all the tubes were up to snuff (I need to replace a couple of them). A bad resistor as well as weak tubes can alter the natural feedback (ping).
...And don't worry, Bob. I have no intention of messing up this nice radio by playing around with the filter cap values! :-) Thanks again!

Don't know about slot cars, but model railroading is alive and well.
They have new technology, called "DCC", where each locomotive
has an addressable decoder and you have handheld controllers
to control individual trains anywhere on the layout. Some of these
handhelds use a radio link instead of a wired link. Frequency around
900MHz.

Four clubs to which I belong (W0EF, K0RT, W0YC, and W0TDX) use 1.25M for extensive digital and analog links for contesting/DX packet clusters, and remote receiver and crossband 2M/75CM repeater links. Additionally, several 1.25M repeater pairs are very popular in our area. I notice that there are at least a couple dozen 1.25M repeaters in San Diego county. And In case you missed it, Amateur Radio is in fact "public use" of these frequencies.

Hi all,

I currently have a (under 2-Years old) Uniden PC122XL SSB transceiver with
an Astatic 575-M6 Mic... Anyways, I was wondering if it is normal for the
radio to/when transmitting (recently), the signal level to drop anywhere's
from 2 - 3 bars?

For what it is worth, SWR is/shows normal, & the mic's battery is new
(replaced 3 weeks ago).

5490. (Possibly dumb) Antenna Question

Newsgroup: rec.radio.cb
Date: 2002-05-27 08:56:26 UTC
From: dgose@webtv.net
Message-ID: <21935-3CF1F4BA-260@storefull-2211.public.lawson.webtv.net>
Source record: 125355

Hi,

After playing CB for many years, we recently moved to a mobile home and I put up my old faithful Antron 99 on the side, about 12 feet from one end, with standard 6 inch standoff, on 20 feet of mast pipe, leaving the bottom of antenna about 5 ft above rooftop.

I now have a unique problem I never had at the old apartment. My transmission, and reception, seem to only work well in along the direction the mobile home is pointing. Reception and transmission to the sides is horrible. I assume the metal construction of the mobile home is causing the directional reception/transmission similar to putting an antenna on the back of the car instead of the roof.

Question: Is there a way around this? Do you think raising it higher or moving it to a actual end of the mobile home would resolve this, or will I have to move it away from the home. My alternative thought is just to get a beam.... My radio is a very basic, unmodified Realistic Navaho TRC-433, and it just does not have the power to overcome this problem on it's own.

Thanks in advance for any advice given to an old fart!

Dale

>How is this so different from what
>the keyclowns do on CB?

Because on CB, one can just change frequency. On r.r.cb, you and N8 (Whoever this is?) don't seem to understand this concept. Don't like the topic of a perticular thread or discussion, find another...or better yet, start another. Trying to draw some type of parallel that you're championing some sort of movement to harass "keyclowns," because "this is what they do to us on the CB" is lame. The newsgroup r.r.cb is NOT CB in the real world.

Dick, I found it interesting to read some of the specs on the larger beasties. I remember years ago we had to build a system and the customer did not want any voltages higher than 120 volts present in the panel boxes. The machine was a good 100 feet long. As I recall, we fed the thing with a 480 3 phase step down to 120/208 volts. Although this was 'low current' compared to some of those 13.8 volt boxes, we had to bend the wires with a hickey (I think the transformer was around 20 KVA). I'd love to see someone install one of those boxes!

Dale, you should be fine if you mount the antenna higher. How much higher? Good question. If someone had some antenna modeling software, it sure would help. You will find much better results with the antenna mounted up a wavelength from ground (even better at two), but I suspect that 38 feet would be quite a stretch for you. My guess - and this is a guess - is that if you can get it up at least a quarter wavelength above the mobile home, you will be a lot better off. This implies only 9 feet above the roof (and you are already at 5 feet). If you can, try going up another 5 feet and I suspect you will see some improvement. Hopefully, someone in the newsgroup can give you a better answer than 'I suspect'.

Lots of luck on this one and 73 from Rochester, NY

SOMEONE FINALLY SAID IT! Hip Hip Hooray!! Finally, someone has said what I think has been on every American's mind!!!!! This is an editorial writtenby an American citizen, published in a local newspaper. "IMMIGRANTS, NOT AMERICANS, MUST ADAPT!!" I am tired of this nation worrying about whether we are offending someindividual or their culture, here in the USA. Since the terrorist attacks on Sept. 11, we have experienced a surge inpatriotism by the majority of Americans. However, the dust from the attacks had barely settled when the "politically correct"crowd began complaining about the possibility that our patriotism was offending others. I am not against immigration, nor doI hold a grudge against anyone who is seeking a better life by coming to America. Our population is almost entirelycomprised of descendants of immigrants. However, there are a few things that those who have recently come to ourcountry, and apparently some born here, need to understand.This idea of America, being a multi -cultural community, has served only to dilute our sovereignty and our national identity. As Americans, we have our own culture, our own society, our own language and our own lifestyle. This culture has beendeveloped over centuries of struggles, trials, and victories by millions of men and women who have sought freedom. We speak ENGLISH, not Spanish, Arabic, Chinese, Japanese, Russian, or any other language. Therefore, if you wish tobecome part of our society, learn the language! ENGLISH. "In God We Trust" is our national motto. This is not someChristian, right wing, political slogan. We adopted this motto because Christian men and women, of Christian principles,founded this nation, and this is clearly documented. It is certainly appropriate to display it on the walls of our schools. IfGod offends you, then I suggest you consider another part of the world as your new home, because God is and always willbe part of our culture.If the Stars and Stripes offend you, or you don't like Uncle Sam, then you should seriously consider a move to another part ofthis planet. We are happy with our culture and have no desire to change, and we really don't care how you did things whereyou came from. Remember, "Delta is ready when you are and they can have you there by nightfall". This is OUR COUNTRY, our land, and our lifestyle. Our First Amendment gives every citizen the right to express his opinionand we will allow you every opportunity to do so. But, once you are done complaining, whining, and griping about our flag,our pledge, our national motto, or our way of life, I highly encourage you to take advantage of one other great Americanfreedom, THE RIGHT TO LEAVE.

Definition of the SuperBowl

Going higher with the antenna will help a little but moving the antenna AWAY FROM THE HOUSE will be your best solution. There are as many ways of doing this as there are people who have done it, so how you go about raising a free standing antenna is up to you. A tower or tall tree would be your best option.

Not a dumb question in the least. A bitchkitty for sure but not a dumb
question.

An Antron is a vertical dipole which means it has a big radiation lobe
more or less horizontal to the antenna but sprays up and down pretty well
too. So the big mobile home is a reflector, a perfect ground if you will
in a particular direction. I doubt if it hurts reception in any
direction, it just helps it in the one to the point where nothing else can
overcome the noise.

The downward radiation is one reason the Antron has a rep as a TVI machine
so if the neighbors are winding nooses and making up pine-knot torches you
now know why.

And virtually every antenna changes radiation patterns depending upon the ground it is over within about 75 feet at CB freqs so a beam could easily have similar effects. With a moose piece of metal that close, it is going to have some effect but there are some things that might help.

1. Altitude, 20 feet wont hack it.

2. An antenna with its own ground plane as part of the design. Something like a 5/8 at 30 or 40 feet and make sure one of the radials points right down the middle of the home. I would personally use a simple 1/4 wave if I were into DX at all (mine is a minority opinion) but its pattern more closely resembles the antron. I would steer away from the 'drooping radial' style.

3. There are radial kits made for the Antron with which I have had no experience whatsoever and doubt they would improve things a hell of a lot.

So I suggest that whatever you do it is going to have to be higher than 20 feet so bumping the Antron up to 30 or 40 is certainly the first step. I would give odds of 2-1 or so that the Antron has to go but no reason to get in a hurry about it. It's replacement will be a ground-plane of some form, your choice on that one. And you may still have a favored direction.

Dick NBK

One of the great questions in my mind is how they maintain anything
resembling system balance inside the box to feed some stupid number of
pills. One of them gets starved and its mates get hot and the whole
shebang comes down in a cascade. Spectacular but damned expensive.

Don't know what immigrants you are dealing with but the South Omaha Mexicans are one hell of an improvement. The Asians we had in Wisconsin will take a generation or two to make it out of the Stone Age but will ultimately work out really well.

Nebraska where I live was settled by draft-dodgers from Europe conned into making the trip by the railroad companies. The Titanic was to pay for itself in steerage as a lot of the liners of the day were designed to do. Chug up the branch lines and kick off the Swedes, the Czechs, the Germans, and the Irish in the middle of not much. So we had over 6000 school districts on a 1.5 million population; my mother's scholarship to teachers college was revoked by the school district when they discovered she did not speak Czech.

Yeah, there are PC types all het up about Cultural Imperialism but the decisions are made by the immigrants themselves and so far (like the Mex flushing bi-lingual ed in Calif) they have made the same decisions every other group has made for 400 years. Sure, some try for a while to maintain the old country but ultimately they either fail or, like the Amish, become quaint.

hi yall. i got this message from a friend in australia and thought some of you stateside dx'ers would be interested in giving this a try.

73

http://www.TimNebo.com

Hello Everyone,
I have set up a Packet Radio BBS on our Australian
packet radio frequency 27.430 usb, the BBS callsign it presently
AUS000-8, this may change to AUS000 on confirmation from the
INTERNATIONAL PG , I have been testing the BBS for a few days now and
it works well locally,anyone wishing to use the BBS is quite welcome
to do so, to get full access visit the Australian Packet Radio Group
web site http://Australian-Packet-Radio-Group.netfirms.com
and go to the "LINKS" page then click on " INTERNATIONAL PG" this
will take you to ITA000 Gianni's site where you can register and
receive your registered callsign, to do this just click on ....
" CLICK HERE FOR PG MEMBER REQUEST " toward bottom of page,you can
then also access the many BBS's throughout Europe, you can send Mail
to your Packet Radio friends and upload and download files,we are
running at 1200 baud and just like SSTV it's a great hobby,
73's and best wishes to all,
de AUS002/43PC122 Warren

I've had a number of people tell me that they thought the price of the new SkyWave amplifer was too high. Since it's my goal to not only to offer a high quality product... I also want to do it at a price that is very attractive. I have reduced the price significantly in an effort to do this. Thanks for all your input...

I didn't say I don't believe you, I said that I had never seen
commercial amps designed for 5 watts input.

>Anyway, here is one example that is a Motorola. You are on your own to prove
>otherwise, which seems to be your sole mission here.
>
>http://www.radio-shop.com/view.php?sku=10024

All it says is VHF. It doesn't provide a frequency range, and many
people consider CB to be VHF (despite the historic definitions of HF
and VHF). Since the frequency range isn't specified, it's probably a
wideband amp and capable of operation on the CB, which would make it
illegal and certainly not designed for commercial use.

Got a better example?

Interesting problem. One solution might be to mount the antenna off
the side but near the center of the mobile home. You might get
improved but not excessive reception in two, or maybe even three,
directions. Another option would be to set the mobile home on wheels
and turn the whole thing like a beam. That might not be too practical,
though. I think the best thing to try would be to run ground lines
from the base of the antenna to nearby objects on the other side of
the antenna in an attempt to balance the field. The neighbors might
need a little convincing, but you can always tell them they can use
the lines for clothes lines, light stringers, wind socks, chimes,
shade tarps, or to run up a US flag.

LOL Spraying water/fert on grass takes alot of talent LOL

Talk about trolling, you are trolling my posts, arent you Moped? Didn'tt you post a thread last week that said to ignore me? Why not take your own advise, or is it that you like to be a troll and cause trouble? You have the nerve to call me a troll you by far have made the mosts posts on this NG for past 2 years. Very rarely do you help anyone if at all. Isnt that right LawnBoy.

I don't know if you really have anything to say, Roger. You didn't even allow the death of your mother in mid-April (published in the Moundsville Echo) to slow your torrent of filth. If you'd like to continue those of your sociopathic rants about me or my wife, I'll be happy to speak with Chief Stenger about you once again (as I cautioned you when we met face-to-face at the March meeting of Marshall County ARES). As you know, he has seen the posts you've made to and about me and my wife in the past and he seemed well aware of you.

quite sincerely,

Dave Heil K8MN

What if someone on CB uses an amp? Now, no matter what frequency
you're on, you can hear them.

> On r.r.cb, you and N8 (Whoever
> this is?)

Take a rrcb history course.

> don't seem to understand this concept. Don't like the topic of a

Good advice to the radio pirates, outlaws, bootleggers, keyclowns, etc
who are resentful when they get static for posting in rec.radio.cb.

> Trying to draw some type of parallel that you're championing some sort of
> movement to harass "keyclowns," because "this is what they do to us on the CB"
> is lame.

I'm not championing any movement. I disrespect keyclowns because they
disrespect CB'ers in general. (Read IceCold's "only 10 of the elite
may use the frequency" manifesto/verse)

>The newsgroup r.r.cb is NOT CB in the real world.

Sure, if this were CB, we'd be interfered with anonymously.

> retuning.

Afraid not. The BD-35 has an internal duplexer so that one can transmit on one band while still receiving on the other. The duplexer is also part of the matching circuits used for both bands. To move the operating frequency will require a major redesign of the matching circuits in the amplifier. The higher power version is not much different. Second you can't get a schematic of the amp from Mirage either, I have tried several times, because the amp is made in China. Without a schematic to examine modifying the amplifier is a joke unless one wants to dissect one, and make a schematic from scratch.

>
> The fox hunts will turn up some of their own people.

I hear this typical "garbage" from CBers all the time, Hams operating out of band. However where are all of those so called "Hams" operating out of band, and getting busted? I see far more CBers getting busted for freebanding, and running power. In fact several CBers have said they even heard me ID on the freeband using my Ham Callsign. Since I never operate there it's clear to me that somebody was bootlegging on HF using my call. Then to claim same instance as "proof positive" that Hams operate out of band, stupidly ID'ing themselves, does not persuade me in the least. Any further argument runs into the same problem, just because somebody hears a Ham callsign, does not imply it belongs to the person using it on the air. So until somebody can provide proof positive the accusation is basically BS.

The idea that Hams would limit themselves to 2 watts on five frequencies on MURS, compared with up to 1500 watts over 4 MHz on 2m, is so ridiculous as to not even be worthy of serious consideration.

Works for me. Now if that is so easy for you to answer, and you gave
plenty of examples, why don't you address the question you keep
avoiding: How does one-way skip affect band noise differently than
two-way skip?

leland, go to some of the enforcement websites. i'd say 99% of the bust i remember as of the last several years as far as out of band operation goes where ham operators. dont forget leo martin and all the others. reading your post here would leave one to believe there are not alot of hams caught kerchunking repeaters and out banding on 11 meters which is far from the truth. riley keeps busy busting your fellow hams.

It would seem ridiculous to limit themselves to 2 watts on MURS, they
were running well in excess of 2 watts on MURS.

On with the fox-hunts.

Mike

Wishful thinking:

In the 2000s, the 250 km limit was dropped to to overwhelming public outcry and the FCC's inability to enforce this rule. The dropping of the ITU Morse requirement for amateur access to frequencies below 30 MHz in 2003 paved the way for this ruling.

>another.
>
>Good advice to the radio pirates, outlaws, bootleggers, keyclowns, etc
>who are resentful when they get static for posting in rec.radio.cb.

You appea to have missed the point, intentionally or not. Why should anybody "get static" for posting on r.r.cb? That's what the mouse is for to select the thread that appeals to you. If you select a thread that doesn't appeal to you solely with the intention of posting inflammatory remarks, (Even those against duscussions of illegal "activities.") then your complexion just torned greenish and your address in now beneath a bridge.

>I'm not championing any movement.

This, we know.

>I disrespect keyclowns because they
>disrespect CB'ers in general.

You DO sound like daaged goods, Aaron. Where are all these CBer's that feel "disrespected" on r.r.CB? I can count your supporting cast on one hand. (Multiple screen names don't count.)

>(Read IceCold's "only 10 of the elite
>may use the frequency" manifesto/verse)

Here's the difference, my lonely little friend. If two people start a thread about how they enjoy legal radio and dislike illegal interference, do you see ICE, Train, SDJ, Bert, Dick, or Tim immediately jump in and advise them to use an illegal radio or amp...multiple times...over and over and over? I may not agree with their stances and I may very well agree with yours, but your posting style makes you a troll, plain and simple. By your own admission, you merely want to "get back" at those who have, ostensibly, hurt or "disrespected" you. Sad, lonely, little soul whose only recourse is to troll r.r.cb, get ebay auctions invalidated, and forward info to the "appropriate authorities." Only then do you feel like you've struck back at those who've hurt you. It'd be amusing, if it weren't so damn sad. Take care, Aaron.

>Sure, if this were CB, we'd be interfered with anonymously.

?

Again, take care and 73.

If you're talking about 11M, CB "skip talkers" represent a tiny
fraction of the US population. Hardly an overwhelming public outcry.

>The dropping of the ITU Morse requirement for amateur access to
frequencies >below 30 MHz in 2003 paved the way for this ruling.

We are well aware that most radio pirates dream about the removal of
all rules that would limit them doing whatever they want on any
frequency they want. Thank you for your input.

Who mentioned anything about "radio pirates" or "doing whatever" on "any frequency?" Just drop the 250 km limit, 40 channels, 4 and 12 watts respectively. Oh, your welcome.

>sparky, perhaps you can explain just what "one way" skip is.

As Randy noted, skip isn't always reciprocal. This means that just because a path is open in one direction doesn't mean it will work both ways. But Randy seems to think the noise level on a given frequency will be different from when skip is reciprocal (two-way skip) than when it is not reciprocal (one-way skip). He has yet to explain why. Do you think you can give him a clue, Tim?

From: RadioHead11m (radiohead11m@aol.com)
Subject: JOIN THE ARRL!(Spell checked version)
Newsgroups: rec.radio.cb
tDate: 2001-02-11 09:23:02 PST

Hello fellow 11 meter enthusiasts,

I have a new idea. So much has been made of the fact that we(11m ops) have no
real representation in DC while the amateur community has the ARRL. The USCBOA was a nice idea but seems to lack the organizational skills to get airborne. I got this idea while reading a ham forum thread where many amateurs were complaining about the ARRL allowing "chicken banders" to infiltrate the ham bands and vowing to cancel their membership. Well, here it goes.

JOIN THE ARRL! That's right, make them live up to their name. The AMERICAN(NOT
Amateur) Radio Relay League. In the mid 60's, the number of CBer's outgrew the
number of licensed amateurs. The price is $39.00/yr. and you need NOT be a
licensed amateur to become a FULL member. I know that's steep, but I've spent
more on a power mic and this money REALLY makes my voice louder. I'm sure there
would be a bit of resistance in the beginning but the ARRL is made up of hams
who are...politicians. That's right folks, let the first official lose their
post at the hands of an 11 meter "swing vote," and see how our "concerns" take
on a little more importance. Here's a bonus, when you here an old stodger cry
"I'm canceling my membership," rejoice...that's called a two-for-one sale. Your
vote no longer opposes their's, it REPLACES it.

The kicker is that if you plan to be as vocal as I am, you need to run legal.
I'm NOT preaching. I freebanded for over 10 years and LOVED it. However I send
letters to my representatives and the FCC, so my house must be in order. Riley
Hollingsworth himself can come to my QTH for a surprise visit. I sent a letter
to my reps re. RM-9807 and asked why the FCC admitted that the MAJORITY of
CBer's were in favor of dropping the 155 mi. limit rule, yet the ruling was
swayed by "private interests," namely the ARRL and NAB. Not only did I receive
a reply, but it included a reply from the FCC to an inquiry by my rep. Did it
really make a difference, perhaps not...but I know at least three more souls

know about a "voter's" displeasure.(An election year to boot!)

I sent a letter to Radio Shack(Tandy) in Fort Worth, TX re. their HTX-10 and
it's inability to be modified at their request.

*I explained that there are some who may want the capability to "monitor" (;-P) the 11 meter band as well.

I returned mine and told them that I would gladly pay the extra $50.00 to RF,
Ltd. for their Magnum 257(the modifiable version of the same rig) and will now
purchase all my ham study material and 2m h/t elsewhere due to their policy.
Again, did it make a difference...perhaps not, but at least they know that they
lost approx. $450.00 in sales plus restocking costs.

Remember, to be this vocal, you need to fly right. I miss freebanding but it
gave me many many hours of pleasure over the last ten years and this is the
best way I can give back to 11 meters. If you don't plan to quit freebanding,
don't be too vocal and run a "common sense" set-up. Your ARRL vote still
counts! I never ran amplifiers and worked the world with a Clear Channel Ranger
AR-3500(30 watt model) and a two element yagi. I also encouraged five of my
friend to do the same. It kills me when I hear hams flame us and there's little
we can do because we don't want to attract the unwanted attention. Well,
sometimes you have to defend yourself with the weapons the opposition gives
you. The ARRL rates recently went up, you should hear the hams crying and
threatening to cancel...go for it I say.

Nor has the ITU dropped the code requirement. This comes up next year and
quite likely will be deferred again as it has been the last two WARCs.

We can thank the broadcast industry who found ways to drop in local
or regional AMs where the clear channel "holes" were and the
manufacvturers who now make AM broadcast transmitters that are much
more reliable and therefore do not need to go off the air on Sunday
nights for "maintenance".

>Radio is an appliance to Americans, not as much a hobby anymore.

It's our job as hams to make it a hobby again.

There's a whole WORLD of things you don't know, ASSHOLE. In fact by the
expression on your gorilla-like face, It'd be hard to believe that you know
anything.
Funny, the First amendment allows me to have the opinion that you are a
narrow-minded, stupid son of a bitch. See you engage in the very same
tactics you say I use with Jim here.

For instance, did you get touch with Carl Stevenson's local police, too?

I can have opinions, Heil, you fucking asshole. And my opinion of you is that you are a fucking retard. Use a fucking post filer/killfile or just fuck off.

>I'll be happy to speak with Chief Stenger about you once again (as I cautioned
> you when we met face-to-face at the March meeting of Marshall County
> ARES).

Stalker boy, you go right ahead. I still have the freedom of speech, you neo-nazi asshole. I have evidence that the only reason you went to the ARES meeting is to try to stalk me, too, ASSHOLE. And it didn't work, you made yourself out to be a desperate whining ass, former government errand boy. And after the inquiry why the police is harassing me (and your harassment) will look funny down at the Prosecutor's Office.

> As you know, he has seen the posts you've made to and about me
> and my wife in the past and he seemed well aware of you.

But he hasn't seen you threats made to me by e-mail yet, but he will, ASSHOLE.

> quite sincerely,
>
> Dave Heil K8MN

Fuck off. Learn to killfile me or just shut the fuck up.

I have mixed feelings. Silly regs, and it is silly in 2003, are corrosive
but I have to admit that the moaning and gnashing from people who have
accused us coded types of everything but child molestation will have an
almost musical quality.

The issue is so far down the agenda that any objection and it appears
Russia and some others may well object will doom it to oblivion.

I dunno, Paul. The thread started about how great MURS is. How is MURS more relevent than amateur radio? As far as your per-captia stats, you might have a point. U.S. colleges are graduating more and more foreign engineers and doctors than ever. You may have a valid point. I wouldn't be surprised to find the U.S. an also-ran 3rd world country in another 25 or 30 years. Everyone wants an MBA. Read Dilbert. It is one comic strip worth reading. Don't worry - Japan will design and build all the FRS, cell phones, stereos, and televisions you want. (oops, make that design. I forgot. The little dragon is building the stuff now - at least the stuff that China isn't.)

I'm with you on this one, Dick. I think the code has always had a place in amateur radio. Maybe not 20, but 5 and 13 w.p.m. are not unreasonable. You know my feelings about dropping the 250 km limit. The only silver lining to the possible dark cloud of 2003 is the removal of one potential argument against dropping the 250 km limit.

>The issue is so far down the agenda that any objection and it appears
>Russia and some others may well object will doom it to oblivion.

Fingers crossed. ;-) Take care and 73.

Mark, you need to take the advise you give out Aaron is free to say as he wants without hearing STATIC just as you say others are free to say what they want. 2 way street ya know. Here is the problem we have run into a stalemate. If you say it is ok for others to talk about Illegal Items, then Aarons right to say they are illegal starts right where your talking illegal ends. It is no different than him standing on a corner where they are selling drugs and yelling hey this man is selling drugs, now I know all you jackasses are gonna say Oh yeah I like to see him do that he will get his ass kicked ... Spare the stupid comments/excuses, as usual , he is as free to say what he does as you think you are. .

No legitimization attempt. Just a proposed tactic to discourage the ARRL from ever again interfering with the legal attempts of CBer's to drop the 250 km limit. (i.e. RM-9807) Thanks for reposting it, I'm very proud of it.

>You know what, Aaron? Your absolutely right. Thanks guy. :-)

I take it back, I just wanted to forget about you and USENET while I watched the NJ vs. Boston game. Congratulations Bert. :-)

With all due respect, gentlemen, you are finding a problem that does not exist and in the process creating a new one and preventing a solution to a problem that most certainly exists.

The existing problem is that when I go on Social Security there will be 3.5 workers supporting me: I call them John, Jose', and Willie and me and another codger will share Wun Hung Lo. We have prefunded Social Security about as much as can be and in fact overshot it somewhat so that the House Republicans get to figure out how to spend the money and not raise the debt limit (which was a stupid Republican idea to begin with). We are in great shape next to Japan and most of Europe. At this point in the game the part represented by Jose' and WHL are a whole lot more reliable than John and Willie's.

This is all based on the idea that immigrants are not assimilating and are somehow demanding that others adapt. To some extent, this has gone on forever with assorted Anabaptists and before that with a bunch of yo-yo Calvinists we call the Pilgrims. It is perfectly normal for first-generation immigrants to stick to old ways: the Germans pre-1917 were the worst by far he says as he nurses a bottle of good white wine from Missouri. Some of the Hmong refugees and they are refugees not immigrants (lots of guys my age are alive because of them) take convincing that kidnapping your 14-year old bride is not legal and is heavily frowned upon but this process has proceeded apace.

Criminals and Mafias. Yes, the pre-Sicilian gangsters were Irish and Jewish (remember Myer Lansky) and there is indeed an economic factor in crime so a group lower in the food chain will have some to be sure. It got sorted out when the Irish joined the police force and New York's Jews learned English and went to work. Life moves on.

And Islam will indeed be a problem for no better reason that just as Christianity has never learned to be a majority Islam never learned to be a minority. That will be fun. But somehow I think that Friday-closing laws will never be the problem Sunday-closing laws were. And in contrast to Israel, the airplanes will run on the Sabbath.

Just where have our immigrants failed to do their share?? The PC types sold bi-lingual education and the California Mexicans tore it down in favor of English-only instruction. Hell we didn't do that for European immigrants in this part of the planet. As I noted, a lot of teachers in Nebraska had to be bi-lingual and in some cases tri-lingual to function right up into the 1960s. Yes, language is a big deal but a bigger one for the immigrant than for those born here.

The local Mexicans do vast amounts of roofing and concrete work and do it rapidly and well. Until he learns English the Mex is an employee, afterward he is a contractor; it's that simple and they know it. I ate every Thursday in a Mexican place in South Omaha where English has not been the primary language this or the last century. I didn't understand the polkas in Polish, Czech, and German and I don't grok them in Spanish either, BFD. But when in the UN General Assembly that I live in I knocked off some polka with a black lady to some Mex music playing from a radio the Mex found it fun just like we did. Now in this restaurant, Grandma does the books and runs the register, Mamacita runs the kitchen like a Sturmfueher, and one of the kids -- schoolbooks at the ready -- is chained to the register in case an Anglo like me wanders in. Pretty standard immigrant enterprise. And as Tex Mex can be very greaseless, my doc approves all over the place. In Wausau WI where I spent 18 years there are now I am told five Albanian restaurants. I used to eat in one of them run by a guy who looked like he should be carrying a scimitar. If he was a Muslim I am one of the Marx Brothers and I suspect if I put a magnetic INS sign on a plain-Jane Ford I could have closed him up driving into the parking lot. Not only could he cook, he spoke about 17 languages to keep his enterprises going. He was probably a crook but my gut didn't care.

Maybe it is just that I grew up with this sort of happy horseshit, my best high school bud was the son of a packinghouse worker from Latvia, one of the post WW2 DPs. He now is a well-honored professor at U of Michigan among other places. Put 'Vinovskis' in your search engine.
While my dad was on an extended camping trip with the Japanese I lived with the grandparentage in a Czech area of NE and I remember being proud of myself for learning to pronounce the fire Chief's name Chochalosek or something like that and I responded pretty well for a three-year old to 'Jak se mate', 'Dekuji, dobre' and promptly forgot it all.

Get it straight, Europe is kaput and Japan will sink below the waves before they change. The world is approaching the same level of

globalization we had in 1913 so those of us who view the 50s, 60s, or 70s as 'normal' are in for a rude awakening if we don't get into the bigger picture. There has not been an American since 1620 who died in the same America he was born into; if we think we are any different, we are simply fools.

>wants without hearing STATIC just as you say others are free to say what
>they want. 2 way street ya know.

Really?

>Here is the problem we have run into a
>stalemate.

Before we press ahead, be advised; there's NO problem. This is just a USENET newsgroup and it shuts down along with the PC. Aaron Voobner, ficticious or not, disappears along with it. Now when I actually hear Aaron on the CB, or any other freqs for that matter. then that's real life. This is just entertainment.

>If you say it is ok for others to talk about Illegal Items, then
>Aarons right to say they are illegal starts right where your talking illegal
>ends.

No offense, but this sentence got a bit incoherent. I think I understand your point and I agree. Aarons, a big boy though. It's ok for him to ake a sip of his own medicine every once in a while. If you've read my posts, you'll find that I actually agree with many of Aaron's points. It's his "delivery" that pushes him into troll status and he's noone to blame but himself. That's why noone appears to take him very seriously. (Sans Sparky and George's various incarnations.)

>It is no different than him standing on a corner where they are
>selling drugs and yelling hey this man is selling drugs

Big difference, cloak of anonymity. Nothing wrong with that, but it's a HUGE difference.

>now I know all you
>jackasses are gonna say Oh yeah I like to see him do that he will get his
>ass kicked ... Spare the stupid comments/excuses, as usual , he is as free
>to say what he does as you think you are.

Agreed. Take care and 73.

Hi everybody,

I was watching one of those 'police chase' shows on the Discovery channel yesterday and was pleasantly surprised that one story involved a trucker using his CB to comm with the pusuing police cars. The trucker was an ex-AL state trooper who used his truck to slow the flight of some fleeing felons. It's nice to see CB radio get some positive press every now and then. Just thought I'd share that with the newsgroup. Take care and 73.

It is a concern. At the least, it means that the voltage drop on the
house wiring is greater than specs - so the wiring may be overheating.

It may not be a problem, but that needs to be verified.

Why double sideband? SSB should work just as well.

Hm. Is there a standard for AM that determines which sideband is
discarded along with the carrier when extracting the signal in a
receiver?

Greetings all, sitting here sipping a cola and having a spicey burger hot off the grill.

I am tinking back on my family members, and friends who have or still are serving our great country. I am also thinking of those who were lost 09-11-2001.

I had a decent weekend, the weather was good for the most part, Saturday afternoon it got a bit exciting, while trying to put a 5/8 wave 2m antenna on our emergency communications trailer we got hit by a hail storm. Word of advice, don't work outside when hail is falling that ranges from 3/4 of an inch to 3 inches, it kinda hurts a bit when ya get hit on the noggin.

Well I have seen hams use out of band freqs, 151.055, 451.1875.... not just heard, but seen. Don't for a minute think that hams don't go out of bandm they do it all the time, for various "reasons". Threy don;t get busted, cuz they don;'t cause interference, they run open pl, and aren't running dirty amps.

> MURS.
>
> The fox hunts will turn up some of their own people.

I hear this typical "garbage" from CBers all the time, Hams operating out of band. However where are all of those so called "Hams" operating out of band, and getting busted? I see far more CBers getting busted for freebanding, and running power. In fact several CBers have said they even heard me ID on the freeband using my Ham Callsign. Since I never operate there it's clear to me that somebody was bootlegging on HF using my call. Then to claim same instance as "proof positive" that Hams operate out of band, stupidly ID'ing themselves, does not persuade me in the least. Any further argument runs into the same problem, just because somebody hears a Ham callsign, does not imply it belongs to the person using it on the air. So until somebody can provide proof positive the accusation is basically BS.

The idea that Hams would limit themselves to 2 watts on five frequencies on MURS, compared with up to 1500 watts over 4 MHz on 2m, is so ridiculous as to not even be worthy of serious consideration.

Neither sideband is discarded as such. We just wheel the sig into a
non-linear device, diodes are the current rage but other things (look up
Grid Leak detector) have been used, and let the sidebands beat against the
carrier to produce audio, then bypass the rf remaining to ground and deal
with the audio. Standard crystal set: one each diode, cap. Tuning and
hi-Z headphones are useful if you actually plan to do anything with it.

> Apparently you've never had a keyclown in the immediate neighborhood.

Hey Aaron, I used to live in the town of Uniondale. (Islander country
baby!) Uniondale is bordered to the north and south by Hempstead and
Roosevelt respectively. Two ch. 6 hi-po amp driving townships, to be
sure. Locally, I chatted with the folks from the neighboring easterly
towns of East Meadow and Levittown. (Mostly fellow 11-meter
"hobbyists.") While I didn't appreciate having to QSY, my receiver's
"clock didn't get cleaned." That was back in the 70s when the airwaves
were crowded. I manage to monitor now and many of the frequencies are
wide open with the traffic consisting mainly of DX ops. Sure, there
are "Kilowatt Charlies" here and there but, as in other aspects of
life, you deal with them. (Not obsess.) There WAS one guy that came
close though. He went by the "handle" of Superstar Sam Cooke or Bobby
Womack (After the singers, I'd venture.) and if you were within 100
yds. of his mobile, you knew it. He remains one of my two actual
"Kilowatt Charlie" sightings. It's kinda funny, all that money and
effort...to heat a small can of oil mounted on a "coily" style
antenna. Go figure.

Aaron, I think he meant some others on the newsgroup. The (Take your pick) is Aaron Voobner is kinda old now. Personally, I don't think there's an "Aaron Voobner," but someone's typing away at the keyboard and that's certainly good enough for me. Your "supporters," however, really don't help your message though. (Nor do any posts the use profanity against you or advocate amps and such help me improve the CB's image.)

> Thanks for your concern, Mark. Here's a reprint of your personal
> "campaign" to legitimize illegal CB ("freebanding") via *deception.

I that what Mark's trying to do here, Aaron? Wow, you must be getting desperate to attempt this angle of attack. Let's take a look, shall we?

>Apparently the government thinks being a "radio outlaw" is serious enough to warrant a $13,500 NAL.<<

Only if one defines a "radio outlaw" as one who commits repeated violations of FCC rules after being warned usually several times (which you clearly do not).
None of your past stated interpretations of what constitutes a "radio outlaw" has ever resulted in a fine without a warning, usually several.

>So radio piracy is definitely NOT comparable to jaywalking, speeding 56 in a 55, etc. no matter HOW much you try and convince people otherwise. Aaron<<

Agreed. Taken in proper context, the results from speeding carry the serious potential, and often does result in the injuring of innocents. CB radio piracy does not, no matter how much you try to convince people otherwise.

>Apparently the government thinks being a "radio outlaw" is serious
enough to warrant a $13,500 NAL.<<

Only if one defines a "radio outlaw" as one who commits repeated
violations of FCC rules after being warned usually several times (which
you clearly do not).
  None of your past stated interpretations of what constitutes a
"radio outlaw" has ever resulted in a fine without a warning, usually
several.

>Twistys, Do you Know Mr. Jerry Smith? No you say<<

I didn't "say" anything.

> Well my friend I do know him personally<<

Then you would know I am right and you are wrong. If not, simply ask
him.

> I have one burning question how do you know he was warned several
times? <<

Simple. I am extremely familiar with FCC enforcement procedures.

>I want to hear you say how you know this to be fact<<

What you fail to comprehend is I am not the slightest bit interested in
what you take to be fact. The mere notion that you are attempting an
implication that a rogue cber or hammie wasnt warned prior to action
taken shows once again, you know nothing of the procedure.

>...Remember just because you say it Twisty...everyone say it all
togther with me
.."Doesnt make it so"<<

Sure it does. That only applies to you. I put forth no fallacies.

I say CB'ers running 5,000 and 10,000 watts are a problem. You say
they aren't a problem. We both have first-hand experiences that
support our positions. Neither of us are lying. But, regardless of
lack of negative experinces with keyclowns, I can't understand why a
guy like you that's not into "watts" would defend the antisocial dopes
who are ruining the airwaves. It just doesn't make sense.

Mark inferred that I, Aaron Voobner, was on some kind of crusade, and
that my time writing the FCC and calling manufacturers was foolishly
spent. Boy was he upset when I came up with a post that showed him
doing the thing he accused me of (!).

Sure, but read on. His METHODS include lying to manufacturers like
Radio Shack and advising people to "freeband" but be careful not to
get caught.

Not very noble or ethical, Bert.

Here's the part I wish someone would explain. Repeal of the 155 mi.
limit rule and "freebanding" are linked together, at least in the
context of Mark's appeal for CB'ers to take over the ARRL.

Yet, in many of my discussions with freeloaders they loudly protest
that their goal is having the 155 mile rule repealed, nothing more.
It's pretty obvious freeloaders see the repeal of the 155 mi. rule as
a key pillar that, if toppled, will pave the way for the
legitimization of a lawless and unlicensed version of ham radio (i.e.
'freebanding').

> "Fly right," what a terrible message

Not a terrible message but a flawed one. He's telling the looters
"don't loot, but if you must loot, don't get caught".

Yuck.

Take over the ARRL from the inside and force government to legitimize
freeloading? A pipe dream at best.

So now your saying you didn't Imply that he commited repeated violations and
avoided all warnings including several as you say? Twisty I just think some
type of proof of this be offered ie:know the man, talked to FCC agent etc,
Please then explain what you meant then from this comment in reply to aaron.

Aaron wrote: Apparently the government thinks being a "radio outlaw" is
serious enough to warrant a $13,500 NAL.

Twitsy Muttered: Only if one defines a "radio outlaw" as one who commits
repeated violations of FCC rules after being warned usually several times
(which
you clearly do not). None of your past stated interpretations of what
constitutes a "radio outlaw" has ever resulted in a fine without a warning,
usually
several.

I plan to get a scanner for my car ('84 Mercury Grand Marquis). For the antenna, I plan on getting the FireStik Mobile Action Scan (Model: MS-4) (http://www.firestik.com/Catalog/MSM-3&4.htm) and for the mount, the Jeep Bump-Stop bracket (http://www.firestik.com/Catalog/MK-JBS4R.htm). I will mount it to the extreme right side of the rear bumper.

My first question: Do I need to get a spring for the antenna, or should it be OK without?

Second question: Would anyone reccomend a better spot to mount the antenna? In the future, I may get a second antenna on the opposite side of the car for my CB radio with the same mount, and a 5 foot CB antenna. I park the car in a garage, so I can't do something like mount a 5 foot antenna on the roof.

4 foot, spring?. I use KW-7's without springs. Work a lot better
then a 4 footer. Go with at least a 5 footer. Center & higher is better.

Because of the incursions onto Amateur bands, some clubs are returning to
the practice of offering equivilent prizes instead of radio gear to
non-hams. It still meets the legal ob-
ligations for prize drawings and removes temptation from those who *may* not
under-stand that all radio is not CB. Some people think any radio is a CB
and requires no li-
cense. There is nothing illegal about owning radio equipment, of course,
but keeping
radios out of the public's hands certainly can't hurt while giving those
interested in radio
time to learn the differences in the various radio services.

I understand that. But one of the sidebands must be eliminated - somewhere
in the demodulation process. Or do AM radios make use of the energy of
both sidebands to produce the final audible signal?

I've got a '69 CJ that I need a radio for. I already have a pretty heavily modified 148GTL, but I'm simply not willing to stick this rig into an open vehicle and risk it getting ripped. I've been out of the CB thing for awhile, and need some refreshing.

I'm looking for a a pointer on what I might be able to grab used off ebay (or from someone here), that'll provide a good platform for tinkering without too much $ output. I'd rather have an older unit .vs one of the newer ones.

I tend to lean towards cobras or unidens, but cannot rememeber which years, models, or country of manufacture provide the best platforms. The old radios go for pretty cheap, so.....

Thanks

Jon

5655. Debunking the MURS/GMRS/FRS Amplifier Myth

Newsgroup: rec.radio.cb
Date: 2002-05-29 00:16:40 UTC
From: horseshoe7@yahoo.com
Message-ID: <5f4fe4c2.0205281616.4a5ccf0@posting.google.com>
Source record: 125519
Cross-posted to: alt.radio.family,rec.radio.amateur.policy,rec.radio.amateur.digital.misc,rec.radio.cb,rec.radio.amateur.misc

Like any of the classic urban legands - LSD tattoos, Kidney theft,
Alligators in the sewers - the GMRS/FRS/MURS high-power amplifier myth
just keeps making the rounds...

http://www.urbanlegends.com/

The myth - spread by hams having a strong "radio cop" slant - has
absolutely no basis in fact. The motivation for spreading the rumor
is somewhat complex - but, the main motivation appears be to maintain
some kind of "superiority complex" these hams harbor over "CB users".
A secondary motivation seems to be to stop the growth of these
wildly-popular radio services - as ham VHF/UHF usage has continued to
decline in recent years, these services are rapidly growing in
popularity.

There has never been a reported violation involving amplifiers on any
of these VHF/UHF frequencies; and, the fact is, there is simply no
real motivation for the average person to use amplifiers on these
frequencies.

THE BASIS FOR THE LEGEND:

Illegal amplifier use on 11m CB frequencies has been an ongoing
problem for many years. However, the dynamics of radio wave
propagation on HF CB vs. VHF MURS or UHF FRS/GMRS are quite different.
Sky wave, or "skip" propagation is commonplace on HF frequencies. To
take advantage of this propagation requires running more than the
legally-allowed 4W output allowed on 11m CB... as a result, many
truckers(and other citizens) have resorted to using illegal amplifiers
to raise the output of their radio stations to outrageosly-high
values; 500, 1000, 1500, even 2000 Watt amplifier use is commonplace -
allowing these individuals to communicate great distances(sometimes
1,000s of miles when the "skip is in"). A side result of this
"culture", has been that these individuals resort to a kind of
"entertainment" by jamming smaller-powered stations ("squashing") when
the "skip is out".

However, on VHF/UHF frequencies, greater than Line of Sight(LOS)
propagation is a fairly rare occurrance - so there is no initial
motivation for an average individual to run a high-powered amplifier
on these frequencies.

The fact that there has never been any direct proof of individuals
running amplifiers on these frquencies, seems to be of no consequence
to the professors of this urban legend. They will come up with all

kinds of contorted reasons why "The end is near", and "widespread amplifier use on these frequencies is just a matter of time". Of course, these are the same arguments these individuals have been making for YEARS, and still - as there are no alligators in the sewers, there are no high-powered amplifiers on GMRS/FRS/MURS.

> remember as of the last several years as far as out of band operation goes
> where ham operators.

The ARRL runs a section of the FCC enforcement logs on a regular schedule Tim. I read them with some regularity. All I ever see for Ham operators are the bozos operating beyond their license privileges; i.e. Tech's, Tech+, Generals etc.; operating on "Ham Band" segments where they have no privilege to operate. So when I refer to "out of band operation" I mean out-of-band, not a simple license privilege violation. It's very rare to find a licensed Ham getting busted for TX'ing out of the normal Ham Bands.

> post here would leave one to believe there are not alot of hams caught
> kerchunking repeaters

"kerchunking repeaters" is not an out-of-band transmission Tim. Second so long as the station activating the machine ID's within 10 minutes its not even a rules violation since one has to ID every 10 minutes, and at the end of the transmission. Finally some repeaters get activated because the dummies responsible for the machine have failed to install a "PL tone" to keep it from keying up when another machine in the area has the same frequency pair assigned to it. In fact there are a couple of machines I hear around the greater Detroit area with just this stupid problem.

> and out banding on 11 meters which is far from the truth.
> riley keeps busy busting your fellow hams.

Yeah, just like those times you told the group here that you heard me ID'ing, with my Ham callsign no less, on 27.555. Since I don't freeband, and never had, it was either a lie on your part, or somebody else bootlegging my call, all in the name of trying to stir up some trouble. Either way it goes a long way to disprove your point, rather than proving, it as far as I'm concerned.

On the local loudenboomer so far as I know a diode cannot tell 1108 from 1112 so if I feed it both I just get a louder 2kHz tone. One can and people have described them as things like 'envelope detectors' etc but it boils down to mixing against the carrier the AM sig is kind enough to provide and taking the audio energy which results. Nothing particularly magical about sidebands - any lightning crash, trashy car ignition, neighboring signals or anything else that makes it down the passband will be beaten against something or simply rectified as a pulse. Diode mixers are definitely not intelligent. You can narrow the passband and detect one sideband and in hi-QRM conditions in the AM days on the ham bands it was done regularly but at some cost of audio output, you had to futz with a knob.

One of the cutes in the American TV system is Vestigial Sideband which simply means cutting off the high frequency, high detail portion of the lower picture sideband. As it happens, most i.f.s and hi-Z tube circuits

for sure detune downward (remember it is inverted in conversion so the detail is downward) on strong signals. The idea was to align the set on a weak signal so that when receiving a fringe signal the i.f. was centered on the video carrier and you got both sidebands detecting to give you an acceptable if not perfect picture and got the detail when the signal was stronger and the i.f. detuned. So, yes, using both sidebands does indeed recover more audio or pix or whatever.

One can do cute things like phase-lock a BFO to the carrier and exalt the carrier beyond the 2/3 of total trash any mixer requires and make it immune to frequency-selective fading (known as ECSS but rather obsolete) and if you work real hard use synchronous detection to achieve all sorts of wonderment, more promised than realized, but get ECSS in the bargain.

Without being critical, the understanding of mixers is really necessary in modern communications and it has not been an easy fight. Edwin Armstrong invented the superhet receiver and in most of the early designs what we call the front-end mixer was called the 'first detector' and the gizmo that recovered the audio was the 'second detector' recognizing that they did the same thing. With SSB it is easier to just build an active mixer and call it a 'product detector' to simplify tuning and avoid the losses inherent in a passive device but just as the UHF front end on your TV does the same thing the old tunnel diode converters did if you are old enough to remember them, all AM detectors ultimately are mixers. FM is a different caper or several of them.

This is why I have become an old harp about overmodulation. Even if you figured a way to exceed 100% (one third of total output) audio, the second detector in the receiver would simply produce its own splatter for exactly the same reason a final will. Mixers, mixers, everywhere and no chocolate chip cookie dough in sight.

That'll teach you to ask a simple question :-)

What do you expect from a guy from Oregon? :-p (I won't say a cross word about NJ since my team's toughing it out against the Celtics.)

>Sure, but read on. His METHODS include lying to manufacturers like
>Radio Shack and advising people to "freeband" but be careful not to
>get caught.

Stop! These are admitted "guerilla tactics," but let's not forget that they're a reaction not an action. As far as "encouraging" folks to freeband, I'll take the advice of "be good, it you can't be good, then be careful" any day of the week. Run right, if you can't run right, then run "clean."

>Not very noble or ethical, Bert.

But effective.

>Here's the part I wish someone would explain. Repeal of the 155 mi.
>limit rule and "freebanding" are linked together, at least in the
>context of Mark's appeal for CB'ers to take over the ARRL.

I don't infer that at all.

>Yet, in many of my discussions with freeloaders they loudly protest
>that their goal is having the 155 mile rule repealed, nothing more.

"Freeloaders" couldn't care less if the rule's lifted or not. They don't play by the rules to begin with.

>It's pretty obvious freeloaders see the repeal of the 155 mi. rule as
>a key pillar that, if toppled, will pave the way for the

I've been monitoring all 5 MURS frequencies for some time now mobile. All I have ever heard is the typical business junk and fast food drive through order windows with just one single exception. I hear low power 1.2KBS FSK packet activity on 151.880 MHz around the Square Lake and Interstate 75 junction in the city of Troy Michigain. Once you get more that a mile or two from that area the signal drops from a S9+20 to almost nothing. A high power signal this is not. And this is in a metro area of several million people with a good percentage of active Hams. So if what you say is true then I should have picked up more that one lousy low power packet station in the last year I have been monitoring, particulary given the size of the Detroit area.

And some of them may in fact be legitimate depending on the Ham. Some do have license privileges to transmit on other than the Ham Bands. In one case I remember seeing a Royal Oak city cop, in full uniform with side arm, sitting at a table in a small restaurant on Woodward Avenue with a very plainly obvious Yeasu HT. His heavy duty Motorola radio was nowhere to be seen. Was he a Ham? I don't know because I didn't ask, and I didn't see him making a transmissions with it while I was there to check for a callsign.

5664. Re: Browning Mark III ping

Newsgroup: rec.radio.cb
Date: 2002-05-29 00:57:38 UTC
From: Tom <tegan@optonline.net>
Message-ID: <6IVI8.194648$ja.52019884@news02.optonline.net>
Source record: 125527

Thanks to all who offered their help on this issue. I have fixed my ping and I also learned a little about it along the way. Here is some of the info that I found out in case anyone else encounters the same problem:

The famous Browning ping is caused by a brief feedback noise generated by the transmitter microphone and receiver speaker as the radio switches to transmit from receive. Therefore, anything that would affect that feedback will affect the sound of the ping.

The volume of the receiver, RF gain setting, microphone gain, and position of the microphone with respect to the receiver speaker can all affect the sound of the ping.

In addition, weak tubes or a worn out resister R54 can also affect the ping.

My solution was much less technical: Browning receivers have a manual tuner. Seems my receiver tuning dial is just a bit off. So when I centered the receiver on the channel number, I was receiving a little above the transmit frequency. Tuning the receiver just below the channel (i.e. right on the transmit frequency) cleared up my weak "ping".

More info on the technical stuff can be found on http://pub45.bravenet.com/forum/show.asp?usernum=3808175660.

Again, thanks to everyone who offered help. I greatly appreciate it.

Stew,
So far, you're the only one spreading these rumors, then
'debunking' them. A lot like the 'fire-bugs' who start a
fire, then report it to be a 'hero'. You need help, boy...
'Doc

It is not "VIRTUALLY USELESS". For operating well beyond the LOS for two stations it would be true most of the time. However for two stations within LOS of each other it is not. One of the factors is the about of ground clutter between them, and how much of the RF power is either reflected off in to space or absorbed. The only other way to beat path loss, while using the same rigs, other than antenna gain, is to boost TX power, thus the market for V/UHF amplifiers. Think about it the next time your cell phone will not connect while inside of the big department store or a customer's factory location etc.

Every once in a while somebody shows up on the V/UHF Ham news group asking where to "buy" and amplifier for their FRS radio so they can talk with their buddy across town. The posts are not Trolls, but honest posts from folks who seem to have gotten the idea from elsewhere like 11m.

I have another alternative for you. It will cost a few bucks but you will get great radiating, more gain and It will look nice too. Buy another A99 and mast and co-phase them. One in the front and one in the back. Absolute perfection. Just make sure that they are 18 feet apart minimum. If you need more help feel free to email me direct. Good luck, Bill

Now there is one that will drive antenna software mad. Co-phased
verticals with goofy ground low to the ground. The radiation pattern will
more than likely look like an EEG of an alcoholic gorilla.

Good grief, Stewart. One begins to wonder exactly what you are trying to promote. I've run phone patches from Guam to Webster, NY, running only 15 watts! I've gotten into a cw net thousands of miles away - running MILLIWATTS. Power is needed in VHF/UHF for some of the more exotic modes. Meteor trails, moonbounce, some scatter work ... heck, with my 6 double a alkalines, I can open repeaters close to 100 miles away (well, one that is high - and that is when I'm up on the 23rd floor of an apartment complex, but you get the idea). Problems happen when unknowlegable folks apply the golden screwdriver. I've seen posts which state you only have to turn a pot to make your FRS radio 'louder'. I doubt going into deviation and descriminators would help as it is likely over that user's head. Believe me, I've had a lot of fun back in the early 70s with CB. The urban legends usually circulate amongst those who don't know enough technology to know when something is simply not true. I saw a post perhaps not a week ago on a board from someone looking for a mod for a radio. Another guy posted a link to a website with the mod. Sure enough, TWO DAYS LATER, the first guy posts again with the subject 'HELP'. Seems he let the smoke out of the components. Seems the radio is stuck on 28.500, won't transmit, and squeals when the audio gain is turned up. You seem to think the amateurs are putting people down. The problem is that some folks are being led into things that they know nothing about - and it shows when some 27 MHz signals are 50 KHz wide. Unless you are working moonbounce, a 3 dB signal gain or loss won't usually amount to anything - yet people mod their rigs to try and get that 3 dB extra, which is usually spread where they don't want it. My guess is that the majority of amateurs are running 150 watts or less. The large majority. And working stations worldwide every day. Why do you think one necessarily needs a linear? Sure, the big gun DXCC guys run 'em (often with a mentality that is similar to yours), but most don't honestly need 'em. Besides, going from a ground mounted vertical to a 3 element beam up 60 feet will often gain you as much or more than increasing from 100 to 1000 watts and cost less.

73 from Rochester, NY
Jim

Voobie,
Those ILLEGAL FAGGOT KEYCLOWNS have no freekin clue. They sit there
planning gay acts and whining about their Masters, the Anti-Keyclowns.
These faggot boyys are so stupid they think that only 1 guy could
possibly think they are the criminal filth that they are.

I know the fellow. He wasn't jerking anyone's chain. He was a bit
upset by their arrogance, not really caring if anyone found out who
they were.

>So if what you say is true then I should have picked up more that
>one lousy low power packet station in the last year I have been

Sure, if VHF had skip. I have not heard any high powered MURS
stations anywhere between Everett and Seattle WA.

If you'd like to chat with your high powered buddies on MURS you might
take a little trip to Billerica, MA. Sounds like it would be an easy
fox hunt, well, more like an elephant hunt.

Mike

I am a disabiled (30%) vitnam vet and I live on a fixed income now. I lost my old Sears SSB 40ch radio many years ago when a so called CB shop in Sunland just screwed it up awefull. I'd like to get back on the air, can only use a mobil as I'd have to drive away from the trailer park I live in. So I'm kind of looking for a 40ch CB with SSB that's STOCK and maybe cheap too. I'd have to plan it for my July budget if one shows up.

===

Well, excuuusse me ;-)

I am not moaning, just commenting on the site... valuable feedback for TKs.
In business, you cannot just tell customers to "stop moaning", or they will
stop coming... and if you don't know what they are thinking, you cannot
possibly adjust for it.
Ever seen sites with a "comments" link, just so you can let them know
if their site hits the mark?

If I visited the sites of two rival shops who I did not know, one had their
catalogue + prices + info on-line with contact details, the other just
contact details... guess who would get the business.

As it happens, I do know both and would deal with the one who gave
me the best deal on what I want at the time (considering distance or
p&p costs also).
I cannot comment on the "cheaper prices", as I only have DKs prices
(from the site), so cannot compare.

I may be tempted to go to TKs some time and look up some old friends
& relatives in that area. Maybe meet up with that "Rocket" chap, find
out what became of old school friends, I know one of my old schools
was "surplus to requirement" and got demolished, even though it was
not an old building.

Regards,

Peter.

> And then [deathly ashamed of being a Brummie] "Brainbuster"
===

You really did pay money for that "Birth place tracker"... didn't you.

I can understand that you do not wish to feel conned... but you have been.
I have NO connections with Birmingham, never have... and the software is
just not working.

Just swallow your pride and tell them you want your money back.

If you decide to use proper software like "Neotrace", remember the
following...

1. You cannot trace a system with a Firewall... it will refuse the
echo request, and you will just track an ISP office.
2. You cannot trace someone when they are off-line... it will not even
get the echo request, let alone return it.
3. With a dynamic IP number, you end up tracing whoever
happens to be using it at the time, or the ISP offices.
4. If you do not give Neotrace your correct grid ref to begin with, it will
not
even get the ISP details right... and may return Birmingham in place
of Manchester or London, which are common ISP locations.

As Google can take 6 or more hours to show a new message, they
are not the ideal newsreading method for "Netcops" wanting to trace
people who do not have a 24-7 connection.

I would hate for you to waste more money on software that will not help
you in your desperate attempt to trace me.

Have you considered counselling to get over your infatuation with me that
is causing you to try stalking me?

Brainbuster.

>
> Ok dumbass the "contact info" is what is changing not the rest of header
> can you understand that
===

Can you not understand that changing any part of the header clearly
changes the header. If the header was not changed, then the e-mail addy in
the header would remain the same.
Pretty simple really... like you.

===
> > Oh yes, I can block anything at "aol.com"... but that blocks EVERYONE

> issues right jackass..
===

Read the quoted text again... properly!!
Here's a clue... I post in English.

Here's another clue... I didn't say you post from or use aol.

===
> > The "aol.com" domain is not *yours*... you do not own the domain name.
>
> Sorry Brummy,
===

Tell us, you didn't get conned into buying that "Birth Place Tracker"
software, did you?
Well, Aaron had to find some other twat to sell it on to once
he realised he had been conned.

===
> I don't post from aol
===

Which is it you have trouble with... reading or comprehension.
I didn't say you posted from AOL.

===
> never said it was mine

===

Trouble with your memory, too...

> ===
> > so do me a favor and block my domain
> ===

My: adj - belonging to.

That suggests that it is YOURS, and you have put AOL
in your header plenty of times.

===
> I use Comcast d*ckbr**th.
===

Never said you didn't... ever considered brushing up on your basic skills?

===
> you put words in my mouth as usual.
===

"so do me a favor and block my domain"
were YOUR WORDS.

===
> Sounds like you have problems then
===

Nothing compared to your basic skills and mental problems.

===
> > And then you will just add an extra letter on the end to get through,
> > while genuine posters will still be blocked.
>
> See Above!
===

See above.

===
> > I have blocked some domain names... but they are the anon. type designed
> > to be used by Trolls (like "xganon.com")... not ISPs with over 33 million
> > members. Bit of an overkill, blocking 33 million people for the sake of
> > one who is not even using AOL to post the messages.
>
> Hey you finally figured out i don't use aol
===

Hey, you finally got what I have been saying...

Why are you so desperate to claim that you "don't use aol", when
I am NOT saying that you do? Something to hide?

===
> > First of all, you replied to my message... a message which did NOT
> > mention you. And you even changed your contact details to make sure
> > I noticed you... what does that tell us about you?
> > But I was merely replying to your message which was directed at me.
>
> Oh you are a lieing sack of sh*t
===

Oh, you are a senile old fool... you cannot remember your own words,
cannot remember changing your fake e-mail to get by my killfile?
Try doing a Google search... Sparky will show you how, Aaron has never
tried it, he's too lazy.

===
> BRUMMYBUSTER,
===

Are you really willing to get that close to Aarons ass, when it is clear he
has made an error by trying to track an IP number after it had been
given to someone else?

You was once very keen to point out that someone had managed to trace
an ISP office... yet you will fall in line behind Aaron when he makes the
same mistake.

Why do you think you have two ears, two eyes, but just the one mouth...
You should use ears and eyes twice as much as your yapper.
Don't believe Aaron if he tells you that you also have two feet... so you can
run twice as fast from the trouble your yapper gets you in.

===
> get a Life BRUMMFIELD
===

I have a life... which is why I don't spend the amount of time on
here that you do.

===
> > You keep changing your name, e-mail address and domain name in your
> > header...
> > that tells us that you KNOW you ARE being blocked. If you really thought
> > otherwise, you would not feel the need to keep bypassing the filters.
>
> I could care less about your stupid Kill file
===

So, if you don't care, you will stop bypassing kill files... huh?

===
you lousy Brummy,
===

Anyone want to buy some tracking software from Georgina?
Genuine reason for sale... it doesn't work.

===
> Get that thru your head I DON'T CARE IF YOU READ MY POSTS .
===

But you keep bypassing filters so that your messages get seen... you
even did it when replying to one of my messages... just so I would see it.

But if what you say to us all is true, you don't care if anyone reads
your posts... so you only post here so you that can read your own
messages... that is one sad, sick person.

Your tripping yourself up with your own lies.

===
> I don't care jack sh*t about you
===

Really?

===
> In fact If Hope you die in a fiery car crash ala Princess Diana
===

That sounds like you give one to me... quite a serious problem you have
there.
Those two statements contradict each other.

===
> Don't read my post nor respond to the m Jackass
===

So, you want me to check the header of every message to see if it is you
before I read the content... you sad Jackass.
You change your e-mail header to bypass my filter, and your nicname so
I may not know it's you... Oh yes, you certainly do give a s**t, you are
desperate to get noticed by people.

===
> It is your call but you
> cannot you are compelled.
===

So compelled, that I keep blocking your messages... and you keep bypassing
the killfile.
Like I said, agree to stick to one e-mail addy in your header, and I will not
even notice you.

But you cannot do that... YOU are compelled to get attention.
I bet you are compelled to reply to this message... you will even be
compelled to
bypass killfiles again soon.

===
> > Try an experiment... keep one e-mail address for the next year... see if
I

> > even notice your posts. Bet ya wont do it, you know I never noticed you
> > until you changed it just to get round my filter, that's why you changed
> it.
> > You also know you will be in the killfiles and just talking to yourself.
>
>
> I got an experiment for you crawl out of that ass you are stuck in I could
> care less about you
===

PROVE IT... keep to one e-mail in your header, so you stay in my killfile.
Can't do it... can you?

===
> brummy Buster why do you feel i care about you?
===

Your lack of comprehension skills are showing again. It really is very
siple:
BECAUSE YOU KEEP BYPASSING FILTERS JUST TO GET NOTICED.
If you didn't care, you would not be changing your e-mail addy so often.

Can you understand that... huh?

===
> Please die tonite.
===

I guess I have disappointed you then.
Tough... Hahahahaha.

Brainbuster.

Isn't it just TERRIBLE! People are starting to communicate all OVER
the place. We can't have THAT now, can we? Better start a rumour on
the Internet, right away! We need to get this evil GMRS/FRS thing
BANNED!!

NOW - THE REAL REASON FOR THESE SMOKESCREENS:

Having failed in their attempts to assert the URBAN MYTH that
high-powered AMPS are being used on MURS/GMRS/FRS, these ham "Internet
Lobbyists" are now trying this NEW TACTIC to divert attention from the
fact that the ham VHF/UHF bands are VIRTUALLY UNUSED - and that
FRS/GMRS/MURS are runaway success stories in public communications.

PSSSTTT!!! Don't look now - but the ham 1.25M band has FALLEN
SILENT... go ahead, scan it for activity sometime - THERE ISN'T ANY!
... and sales of radios for the 222Mhz band have all but dried up.

... what to do? WHAT TO DO?! Let's start another rumour - there are
CHILD MOLESTERS on FRS!! That's it! We need to BAN FRS, because the
Catholic Priest Radio Club has infiltrated FRS with GMRS bubble-pack
radios!

Hi all

Getting a mobile CB mostly for road condition and info (Ch 19).
Cobra has an all-in-the- mic 40 AM channel compact unit that seems
attractive
but it doesn't have SSB. Do I need SSB to get a better range?

TIA
Mike

For sale is a Galaxy Pluto and Boomer 400 Amp.
Both work great and look great.
Amp is brand new.
Radio has connex echo and talk back added.
Astatic mike.

Asking $200.00 for the radio and $100.00 for the amp.
Would prefer to sell together.
Might trade for a laptop with CD, and at least 4 gig hard drive
and 64 megs mem or better

Mike,
You probably don't need SSB if all you want is
road conditions. That's mostly AM and on ch-19,
where you will seldom hear any SSB at all.
'Doc

Just like the CW code speed reduction idea, eh?

As I recall, you LOST that one BIG TIME... and you'll LOSE this one eventually, too.

Yes - eventually the ARRL and the FCC will see the obvious - it is only a matter of time. You can try to slow down progress - but EVENTUALLY it will catch up to you and pass you by.

Tell me - why do you do it? Why do you fight progress? Go back and think about all the arguments you made fighting the code speed reduction - they are the same ones you'll make against opening up 1.25M to a new Novice Class. It's been quite a long time now since restructuring, and NONE of the bad and evil things you predicted have come true. Why are you so NEGATIVE? Don't you have ANY faith in your fellow Americans?

Seems Mr. John / Chris Pringle is at it again.

KC9AOD wrote this on QRZ.COM's Classified Ads:
>Ive spent the past three months trying to get my
>'part of the deal' from this person.
>Now no contact via email.
>If anyone has dealt with John Pringle (VE7NVI) from Canada,
>beware! I lost an Icom 451A to him. 73's...

Someone at the Canadian Licensing Authority needs to do
something about this crook. They keep giving him new callsigns!

He was using VE7RCP or something like that. and ALSO had
VE8AA back in 1998 or so when he took me for $100.00
for a transceiver.
I contacted the R.C.M.P. up there in B.C. and they visited
him twice.
He promised to pay me back, but then sent me a
check for $100 canadian after I paid him $100 U.S.
The check bounced THREE MONTHS later
(which can easily happen with a Canadian bank!)

By the way, his name LAST time was Chris Pringle instead of
John, and he used P.O. Box 108 at some town. I have the info
here somewhere... and he made his 'kill' via an ad he placed
on Usenet newsgroups.

I wonder where KC9AOD found his AD this time. We need to alert other
potential victims as he cheated about 3 or 4 folks last time.

Someone needs to get them to catch and stop this swine
before something really bad happens to him.
I had hams up in 7 land offering to nab him when he
came over the border to hamfests!

The discussion was really about "high-powered amps"; it is VITUALLY
USELESS to use high-powered amplifiers(>75W) in the context of LOS
MURS. Rather than restating the whole premise in each and every post
- I've posted the entire premise in another thread... the point is -
people simply haven't been using these amps on UHF GMRS/FRS or VHF
Itinerants in all the years of the existance of these services - why
all of a sudden would anyone think they are going to start to use them
now?

stewart,
It's not progress you're talking about, it's
only change. Change, just for the sake of change
is one of the stupidest ideas going. If your ideas
had any merit, that would be different, but they
don't.
As to the code speed reduction, how would you
possibly know what my feelings are about it? I've
never expressed them to you, or this NG. If you
knew what they were/are, it might suprise you.
And what new 'novice' class are you talking about?
The one you proposed which was rejected, or did
something happen and no one told me about it? I
think you're mixing fantasy with reality Stew.
Do I have faith in my fellow Americans? Yes I
do, but what has that got to do with what we're
discussing? Just more 'smoke', and trying to focus
on a totally unrelated topic. You've really got that
'politician two-step' down almost pat!
'Doc

PS - I still think you need help Stew baby...

So by adopting your line of reasoning, any crime would result in the perpetrator being recognized as an "outlaw" only after they've been caught at least once and warned? I'm sure that makes murderers, drug dealers and other typical criminals feel a whole lot better.

This isn't baseball. There's no "three strikes and you're out" rule.

> None of your past stated interpretations of what constitutes a "radio

What do you consider injury? Does an an injury have to manifest itself in physical damage? What about mental and emotional stress and suffering? Does the deprivation of entertainment services by a high powered, inconsiderate, self-centered yahoo, not also count as innocents being "injured"? The civil court system seems to agree.

So, in other words, you have friends that violate rules on the ham
bands, correct? Would that pretty much sum it up, Georgie?

>No Randolph my forging frieind he was on the CB radio and he is not a
freind I know who he is he would come into my location s-9 and he is
over 40 miles away<<

You claimed you knew him but didn't bother to ask him what I suggested.
Your last post alludes that you really didn't know him like you claimed
but merely knew OF him. You don't know him at all or you would have
realized he received a warning in the form of a notice that an NAL was
in the PROCESS of being levied agianst him. Guess what Jerry then did?
He IGNORED the letter that commanded a response and the FCC adjudicated
him guilty.
More?
It wasn't an isolated incidence. He was a REPEAT offender.

Did you forget Doug's original question?

"I used to talk on the CB in the '70s and back then many of my friends
used linear amps of 100 watts (approx) in their cars and at home. Are
the amps still as easy to get as they used to be? I used to have two
different ones (a tube and then a solid state).

Thanks for any info. (I'm not trying to buy one, just curious). "

And your nice, kind response was:

"Dave the area you live in most guys are sucking each others dick no time
to
get on CB."

Now you can try to make something out of this, just like the
crap you post, but again, I just asked you why you are so
filled with hate? you come unglued.

You seem to be infatuated with me, I haven't gone to a
fraction of the extent you have to prove this little fantasy.
Your kind of like the dog chasing it's tail, you go at if for
so long that you tire out, catch a few minute rest then start
all over again.

Keep chasing your tail, but I'm going to post when
and what I want, no matter how much you cry wolf "Peter"
I just don't post hate filled sexual innuendo type posts like you do.

From: b_swollocks@hotmail.com
Message-ID: <67c9d341.0205290746.eb359d3@posting.google.com>
Source record: 125620

A baby turtle was standing at the bottom of a large tree and with a deep sigh, started to climb. About an hour later, he reached a very high branch and walked along to the end. He turned and spread all four flippers and launched himself off the branch. On landing at the bottom in a pile of soft, dead leaves, he shook himself off, walked back to the bottom of the tree and with a sigh started to climb.

About an hour later, he again reached the very high branch, walked along, turned, spread his flippers and flung himself off the branch. Again, he landed on the bottom, shook himself off, went to the bottom of the tree, sighed and started climbing.

Watching these proceedings from the end of the branch were two little birds. Mummy bird turned to Daddy bird and said, "Don't you think it's time we told him he was adopted?"

lol, Betty

5757. OT: Gorilla removal.....

Newsgroup: rec.radio.cb

From: b_swollocks@hotmail.com
Message-ID: <67c9d341.0205290747.6f89353a@posting.google.com>
Source record: 125621

A man walked into his backyard one morning and found there was a gorilla in a tree. He called a gorilla-removal service, and soon a serviceman arrived with a stick, a Chihuahua, a pair of handcuffs and a shotgun.

"Now listen carefully," he told the homeowner, "I'm going to climb the tree and poke the gorilla with this stick until he falls to the ground. The trained Chihuahua will then go right for his, uh, sensitive area, and when the gorilla instinctivly crosses his hands in front to protect himself, you slap the handcuffs on"

"Ok, got it." the homeowner replied. "But whats that shotgun for?"

"If I fall out of the tree before the gorilla," the man said, "shoot the Chihuahua."

lol, Betty.

5758. OT: Cure for snoring.....

Newsgroup: rec.radio.cb
Date: 2002-05-29 15:49:24 UTC
From: b_swollocks@hotmail.com
Message-ID: <67c9d341.0205290749.660d78aa@posting.google.com>
Source record: 125622

A man has a dog that snores in his sleep. Annoyed, because she can't sleep, his wife goes to the vet to see if he can help. The vet tells the woman to tie a ribbon around the dog's testicles and he will stop snoring.

A few hours after going to bed, the dog is snoring as usual. Finally, unable to sleep, she goes to the closet and grabs a piece of ribbon and ties it around the dog's testicles, and sure enough, the dog stops snoring. The woman is amazed!

Later that night, her husband returns home drunk from being out with his buddies. He climbs into bed, falls asleep, and begins snoring very loudly. The woman thinks maybe the ribbon will work on him. So she goes to the closet again, grabs a piece of ribbon, and ties it around her husband's testicles. Amazingly, it also works on him!

The woman sleeps very soundly.
The next morning, the husband wakes up very hung over.
He tumbles into the bathroom to urinate. As he is standing in front of the toilet, he looks in the mirror and sees a blue ribbon attached to his privates.

He is very confused, and, as he walks back into the bedroom, he notices a red ribbon attached to his dog's testicles.

He shakes his head, looks down at the dog and says:
"Boy, don't remember where we were or what we did, but, by God, we got first and second place!"

lol, Betty

I'd get a sideband rig solely for the improved receive section. The AM operator benefits from improved filtering as a result of the additional SSB capability. Just my $0.02.

> What's the URL for the web site that sells the linears that work on
> the FRS channels? I'm looking for about 250W out.

You might do a web search for "T-E Systems."

They make high power amps for VHF/UHF ham
applications. They may have an amp for the
450 MHz FM ham band that makes that much
power and only requires a few watts of drive
power. Hopefully you have an early FRS radio
that had the potential to make more than 3/4
of a watt. If not, you'll have to start with a low
power amp, see what the output is, and then
buy a suitable high-power amp designed to deal
with the amount of drive power that the low-power
amp produces.

Good luck.

But it does have a basis in history, and human nature, together with a declining morality standard, and a general "up yours" attitude.

> The motivation for spreading the rumor
> is somewhat complex - but, the main motivation appears be to maintain
> some kind of "superiority complex" these hams harbor over "CB users".

And how does one do that? Whether or not one operator is "superior" to another would be easy to discern based on their overall achievements and their dedication to their respective service. One does not need to promote a superior attitude. The facts will speak for themselves.

> A secondary motivation seems to be to stop the growth of these
> wildly-popular radio services - as ham VHF/UHF usage has continued to
> decline in recent years, these services are rapidly growing in
> popularity.

Why would hams want to purposely halt the growth of another radio service? For what gain? As a radio hobbyist, I welcome any and all outlets for experimenting.

>
> There has never been a reported violation involving amplifiers on any
> of these VHF/UHF frequencies; and, the fact is, there is simply no
> real motivation for the average person to use amplifiers on these
> frequencies.

How about the "entertainment" that you spoke of, of "squashing" other stations? How about for inproving their distance? How about the same motivation that pushed most high powered Cbers, and that is the "king of the hill" syndrome?

>

> allowing these individuals to communicate great distances(sometimes
> 1,000s of miles when the "skip is in").

So you think that "skip" is the sole reason that CBers run amps? You obviously haven't spent much time on CB in the last 20 years. When the "skip" is running, you can work the world with 10 watts. If the skip isn't running, you can't work the next state with 5,000 watts. (Unless, of course, the next state is less than 150 miles away).

I'll give you a clue. Amp usage on CB is about two things, either being heard above the next guy, or preventing the next guy from overrunning you. It's nothing more than a competitive spirit gone horribly wrong, and there's no evidence to suggest that this same attitude would not cross over to any other band available to these same undisciplined people.

> A side result of this
> "culture", has been that these individuals resort to a kind of
> "entertainment" by jamming smaller-powered stations ("squashing") when
> the "skip is out".

A "side" result? I'd say that this is probably 50% of the activity on CB during any given day. Just listen to Channel 6.

>
> However, on VHF/UHF frequencies, greater than Line of Sight(LOS)

Sure there is. The attitude of being the big dog on the block is still as strong on 154 Mhz, as it is on 27.

> sewers, there are no high-powered amplifiers on GMRS/FRS/MURS.

One other thing is needed for this to happen; popularity. And then there has to be someone willing to market these accessories to the people that want them. FRS has deliberately been manufactured and marketed to discourage amp usage, or modifications in general. MURS is still a service in its infancy. It hasn't really caught on yet with the yahoo crowd. As long as there is activity on 11 meter CB, what is the incentive to move to MURS?

As long as these VHF/UHF services are marketed as short range, mostly handheld units, there will be little incentive for the "big guns" to set up shop. But give it time. Start offering fancy radios, cheaply, with lots of knobs and gadgets, and billy bob will be on those bands eventually.

Well, if you think about it, it just makes sense to do it that way. You are creating a service for non-technical people (as evidenced by the non-license requirement), and yet expect them to calculate their transmit power plus antenna gain and subtract feedline loss? Add to that that the radio would then need a means to adjust the power until the ERP fell into spec. It was a quagmire to deal with, at ERP levels.

But it does open up a bunch of possibilities, running 2w into stacked 22 element yagi arrays.......

Bert,
In most cases (all of them that I can think of),
the filters used for SSB are not the same as those
used for AM (3khz vs 6Khz). Unless you're talking
about filtering for harmonics/parasitics/etc, which
would be the same in either case.

Check it out. The latest of many PAGES of marginally humorous and decidely off-colour material with me as the subject.

While I think it's hilarious, it is also clear this guy is a troll.

Question is, will you say he's NOT a troll because he's doing this "in reaction" to my legal reminders?

If so, then may we assume that anyone who posts anything "in reaction" is not a troll?

Hey Twist, the guy rec'd a 13.5K NAL on his first offense, no priors.

I think all keyclowns should be required to go to their wives/family
and say:

"Honey, Kids, Mom, Dad. I've decided to take up radio piracy as a
hobby. There's a chance I could be fined $13,000 or more by the FCC. I
could even go to jail. But that's a chance I'm willing to take because
I think operating radio equipment illegally is so cool."

I have news for the "no one cares about FRS amps 'cause of no skip"
idiots:
It has Become EXtremely popular for people to Purchase higher power
Base, mobile & Handhelds, commercial or Amateur, & (illegally) program
them to use the FRS channels. Hams regularly do it in order to
communicate with unlicensed (wife) individuals, & many people want the
clarity of FM, but the range of a 30-50w base/mobile with a gain
antenna, rather than 1/2w toys.
I would even guess that "illegal" FRS use is much more common than
freeband CB!
Go into virtually any office supply store, Electronics store, web
store, EBAY, or even K-mart & look at all the "High Power FRS" 2 to 5w
(GMRS)handhelds being marketed & advertized exactly like an unlicensed
FRS Radio. Cobra PR-1000, Audiovox, midland, Radioshack, motorola
ect..... These are becomming more popular than FRS radios. Virtually
EVERY ONE of the thousands of people buying these things bust open the
package & load in the 'AA' batteries & start using them, unaware or
uncaring about any "fine print" about a GMRS license in the packaging
that they threw out 2 minutes after buying it!

Hi to all,

I recently bought a (used) BC144XLT scanner, works great. I would like to take
it with me in the car, but the unit accepts 10 VAC input only. I opened the case, expecting to find a bridge, regulator, etc., instead it appears the DC is regulated by a Zener diode after the bridge, so I'm not sure where to tap in for my DC. Anyone done this before, or have a schematic, or know where I can get a schematic? Thanks,

Jay Lutschkin

While I'm pretty much a QRP-type operator, I really don't have any
argument with anything you are saying. But, all of this stuff really
doesn't apply to the services or the discussion at hand. The point
is, there have been ZERO actions by the FCC against any
individuals/entities for running high-powered amplifiers on the
MURS/GMRS/FRS frequencies; and there is(and never has been) the same
type of incentive to run these things, like there is on 11m. That's
all I'm saying.

Twisty, I know him and his situation much better than anyone on this NG, Is he my best friend not exatcly we don't hang out togther, his case around the band in these parts is well documented he is still on the air to this day, he is some 40-50 miles south of me. I do and have talked to him on the air before, I have even met him. Do you want a autographed picture of me and him togther?

Twist, maybe you don't read to well, It is a widely known fact he was bleeding his neighbors they complained loudly many times to him. he didn't care Finally the FCC monitored Mr. Smith who goes by # 1470 state of delaware, after gathering the info that was needed they kindly sent him the NAL, the only warning he got was from his neighbors. no one else. Now do I need to be more specific than that. Ill say it again real slow. I am not best of friends with this guy he is a keyclown but I have talked to him and others I know talk to him regularly, you had no choice he runs a beam with a few Kw the beam is pointed Dead North hey whaddaya know that right in my direction. You keep telling us what you think happend when you have no Clue, nor any ideas. Save it for the keyclowns they are real gullable...

What you are failing to see is that rarely do two radio operators
operate strict line-of-site. Most, if not all radio communications
using VHF and UHF radios are sending a signal to the other radio
through vegitation, buildings, cars, people, etc!

Even when I am taking to repeaters on high locations, I have to
contend with objects between me and the repeater antenna. Higher
power DOES help you to overcome these obsticles.

When I use my FRS radios, I rarely can see the person I am talking to.
DO YOU?

From: nojunk_n3cvj@worldlynx.net (Dave Hall)
Twistedhed wrote:
Apparently the government thinks being a "radio outlaw" is serious
enough to warrant a $13,500 NAL.<<

Only if one defines a "radio outlaw" as one who commits repeated
violations of FCC rules after being warned usually several times (which
you clearly do not).

>So by adopting your line of reasoning, <<

It's not a line of reasoning and applies to nothing else. It has to do
with the criteria used by the FCC to determine penalty.

>any crime would result in the perpetrator being recognized as an
"outlaw" only after they've been caught at least once and warned? <<

Not at all. Crimes weren't even being discussed. If you wish to begin
another topic, merely say so.

>I'm sure that makes murderers, drug dealers and other typical criminals
feel a whole lot better.<<

Your opinion of what you are "sure" of, is irrelevant to the matter at
hand and how it's dealt with.

>This isn't baseball. There's no "three strikes and you're out" rule.<<

Agreed. Each case is taken on it;s own merits, but a standard protocol
exists. You apparently disagree with the current procedure, but
attempting to draw some sort of analogy with your personal opinions
concerning other crimes with what the FCC actually does is pissing in
the wind.

None of your past stated interpretations of what constitutes a "radio
outlaw" has ever resulted in a fine without a warning, usually several.

>Irrelevant. You're still breaking the law.<<

Quite relevant to A's retort. You must have missed it.

>So radio piracy is definitely NOT comparable to jaywalking, speeding 56
in a 55, etc. no matter HOW much you try and convince people otherwise.
Aaron<<

Agreed. Taken in proper context, the results from speeding carry the
serious potential, and often does result in the injuring of innocents.
CB radio piracy does not, no matter how much you try to convince people
otherwise.

>What do you consider injury?<<

My opinions are irrelevant to the facts, but I am genuinely touched you feel so much as to solicit them.

>Does an an injury have to manifest itself in physical damage?<<

You would have to search out a case to base your contention upon..of course one probably doesn't exist as much of what has been put forth by you in the past has consisted of "what-if" scenarios. I doubt such a precedent setting case exists and you certainly will convince no one that one is about to be set, as not many share your view of what constitutes a "criminal", odds are you will find the same reception toward your view of what constitutes "injury."

>What about mental and emotional stress and suffering?<<

What about it?

>Does the deprivation of entertainment services by a high powered, inconsiderate, self-centered yahoo, not also count as innocents being "injured"? The civil court system seems to agree.<<

Civil courts mean nothing in context of prosecutorial cases.

>Dave
"Sandbagger"<<

Nope, they are very useful services... that would be like tearing up
the beginnings of the Interstate Freeway system, because of a few drag
racing gangs (known as the CBers and Freebanders) on Mulholland Drive
in the early 60's.

Quite the contrary - these services are reaching saturation, and need
to be EXPANDED. Another possibility is to release some of the
pressure on these services by allowing family members and friends to
easily get a ham license by opening up the 1.25M ham band to a New
Novice NoCode Voice Class License.

For some of the same reasons they get used on 11m. Not that the operator wants to work DX, on the contrary they want to be king-of-the-hill. Some of these poor folks have such a huge desire to control other people that the only way they can find to do it is by "taking control of a local frequency or channel", as with CB radio. They maybe the low person at work etc., but when empowered by a huge amplifier, that allows them to determine who talks and when or they get jammed, gives them the brief feeling of being in control - i.e. the Boss. How many times on 11m have you heard some channel control freak say " you're not going to talk on MY CHANNEL" followed by a dead carrier, loud music etc? Right, too many times. In short its an ego trip for some of the idiots, and has nothing to do with logic and V/UHF propagation facts. The bigger the amplifier all the better to key over other lesser powered stations in their mind.

Billerica is just a fly speck of a town on the map, and about half way between Boston and
Lowell. I would be more interested in what is happening in the likes of Boston for example.

Hi,

I found a place to buy a couple of nice linear's, and was wondering a few things. 1. Do I need a lisence to use one on side band? 2. How better would a 600W vs. a 300W be, and how far could I reach with each one of them? Thanks for all the help,

Rob

I have a CB in my truck (A Cobra 148 GTL that I've already worked on, and sounds just beautiful, but I want to be heard on side band, and can't even find anyone in my city of maybe 15,000 people on any channel.)

Date: 2001-02-11 09:23:02 PST
Hello fellow 11 meter enthusiasts,

I have a new idea. So much has been made of the fact that we(11m ops) have no real representation in DC while the amateur community has the ARRL. The USCBOA was a nice idea but seems to lack the organizational skills to get airborne. I got this idea while reading a ham forum thread where many amateurs were complaining about the ARRL allowing "chicken banders" to infiltrate the ham bands and vowing to cancel their membership. Well, here it goes.

JOIN THE ARRL! That's right, make them give up to their name. The AMERICAN (NOT Amateur) Radio Relay League. In the mid 60's, the number of CBer's outgrew the number of licensed amateurs. The price is $39.00/yr. and you need NOT be a licensed amateur to become a FULL member. You do, however, need to be licensed for voting privies. The Tech exam should present no great obstacle. I know that's steep, but I've spent more on a power mic and this money REALLY makes my voice louder. I'm sure there would be a bit of resistance in the beginning but the ARRL is made up of hams who are...politicians. That's right folks, let the first official lose their post at the hands of an 11 meter "swing vote," and see how our "concerns" take on a little more importance. Here's a bonus, when you here an old stodger cry "I'm canceling my membership," rejoice...that's called a two-for-one sale. Your vote no longer opposes their's, it REPLACES it.

UPDATE: Truth be told, I truly do NOT want to see the ARRL "represent" or lobby on behalf of 11 meter concerns. I only want to discourage them from sticking their noses where it plainly (By their own charter.) doesn't belong.

The kicker is that if you plan to be as vocal as I am, you need to run legal. I'm NOT preaching. I freebanded for over 10 years and LOVED it.
However I send letters to my representatives and the FCC, so my house must be in order. Riley Hollingsworth himself can come to my QTH for a surprise visit

I sent a letter to my reps re. RM-9807 and asked why the FCC admitted that the MAJORITY of CBer's were in favor of dropping the 155 mi. limit rule, yet the ruling was swayed by "private interests," namely the ARRL and NAB. Not only did I receive a reply, but it included a reply from the FCC to an inquiry by my rep. Did it really make a difference, perhaps not...but I know at least three more souls know about a "voter's" displeasure. (An election year to boot!)

UPDATE: I can't emphasize how big an impact 11 meter enthusiasts could have if they'd follow this lead. If we truly used our "economic might" along with a little political savvy, we could control our own destiny more effectively.

I sent a letter to Radio Shack (Tandy) in Fort Worth, TX re. their HTX-10 and it's inability to be modified at their request. I explained that there are some who may want the capability to "monitor" (;-P) the 11 meter band as well. I returned mine and told them that I would gladly pay the extra $50.00 to RF, Ltd. for their Magnum 257 (the modifiable version of the same rig) and will now purchase all my ham study material and 2m h/t elsewhere due to their policy. Again, did it make a difference...perhaps not, but at least they know that they lost approx. $450.00 in sales plus restocking costs.

UPDATE: Actually the only innacuracy is that one of my friends actually gave me a Magnum 257 as a joke after learning about this. So I didn't actually pay the extra $50.00 for one. I know this is not exactly moral high ground, but it's effectiveness can't be denied.

Remember, to be this vocal, you need to fly right. I miss freebanding but it gave me many many hours of pleasure over the last ten years and this is the best way I can give back to 11 meters. If you don't plan to quit freebanding, don't be too vocal and run a "common sense" (This means CLEAN!) set-up. Your ARRL vote still counts! I never ran amplifiers and worked the world with a Clear Channel Ranger AR-3500 (30 watt model) and a two element yagi. I also encouraged five of my friend to do the same. (Tech ticket and voting privies.) It kills me when I hear hams flame us and there's little we can do because we don't want to attract the unwanted attention. Well, sometimes you have to defend yourself with the only weapons the opposition gives you. The ARRL rates recently went up, you should hear the hams crying and threatening to cancel...go for it I say.

Take care and 73. :-)

Mark

Why bother? All you want to do is spam these newsgroups with your MURS crap.

This is amateur radio, CB radio, or FRS, depending on the newsgroup cross-posted to, not MURS.

MURS has no purpose. It was an FCC wet dream to clean after a radio manufacturing mistake - and it will never be more than that.

There is no such "novice no-code" class. Must be another of Stewart's wet dreams.

Leleand, lets cut to the chase, if the cop was using his ht as a work radio, he is wrong, period.
> bandm they do it all the time, for various "reasons".

And some of them may in fact be legitimate depending on the Ham. Some do have license privileges to transmit on other than the Ham Bands.

We're not talking about mars or caps here. the thread was typical ham operator, going out of band, using a murs, or up here in the GWN, one of the lpu freqs. Wrong , of couse, bothering anyone, no. BUT it does happen, something I can say I have witnessed. and done the odd time. Why, hmm, not enough radio's at an weekend event, dial up the handi to the radio's being used, and off we go. Wrong, of course, hurting anyone, no. He're another example, I was working with another ham and we needed radio's, we couldn';t very well use 147.555 for our purpose, being commercial, so we used 151.055, an lpu freq, with no tone to ensure we didn't bother any of the local security guards, et c.
I'm not trying to call you out on this, just make you aware that just becuase hams have thousands of freqs available, doesn't for a minute mean they won't wander. I will conceed that many hams take a dim view of this, but there are plenty that don't.

Sincerely

Dan

In one case I remember seeing a Royal Oak city cop, in full uniform with side arm, sitting at a table in a small restaurant on Woodward Avenue with a very plainly obvious Yeasu HT. His heavy duty Motorola radio was nowhere to be seen. Was he a Ham? I don't know because I didn't ask, and I didn't see him making a transmissions with it while I was there to check for a callsign.

I have seen court officer using the yeasu ht, I think it's a tad easir to get ear plugs for that the typical Motorola. As long as he's only monitoring, there no harm being done.

You forget that CB'ers increasingly "stick thier noses where it
plainly doesn't belong"...e.g. truckers on 10 meters....freeloaders on
government frequencny allocations....overpowered amps whose harmonics
end up on ham bands, etc.

If I were the ARRL I'd keep a watchful eye on 11 meters, and for good
reason.

Take It Easy,
Best Wishes,

Here's a bit of a response to all the hams who seem to bash cb'ers with amps(no I've never owned a linear) Why is it so bad (besides illegal) to run 100-200 watts on 27mhz, but ok to run 1500 on 28 and 29 ?

I respect all the points you have made. However, because of the fact
that we already have had GMRS and FRS for a great number of years(and
GMRS does allow external antennas, and does share freqs with FRS, and
will allow you to run easily obtainable Part 90 eqpt.), and these
types of antics are not going on - I stand by my basic premise that
the CB culture is FIRMLY ENTRENCHED and QUITE HAPPY on 11m... these
'ol boys can't just "reach out and knowingly squash somebody" for an
extended period of time over in the next county - now matter how many
WATTS they pump out. Oh sure, they could squash the conversation of
little Billy or Susie on FRS for about 30 seconds, while they were
passing thru town, or interfere with a business inventory being taken
on MURS for a minute or so - but that is NOTHING compared with the
HOURS OF PURE ENJOYMENT these CLOWNS can get on CB.

You just live with the wrong people, but you may have answered your own question. Who is going to hear you if you hear no one?? Some of the groupies I am sure have better suggestions re channels and times than I do but try it barefoot first, you will be surprised how much more 'talk power' SSB has compared to Ancient Modulation.

Power is not the great idea it seems. The diff between 300 and 600 is about half an S unit on a receiver so you will be lucky if the diff is even noticeable. Part of the problem is what in hell the amp maker (and amps are flat illegal so don't even think about licensing) means by 300 watts. There are any number of ways the back-alley butchers making amps measure these things. There are also a lot of things they don't tell you. Would you believe that any number of AM amps will take a fully-modulated AM sig and return a 60% modulated AM sig and distorted at that?? You know your sources better than I do but if you believe you are not dealing with someone comparable to a bootlegger or dope pusher you are naive. And what some of these Antique Modulation amps do to an SSB sig should not happen to a stuffed billy goat. Kind of like buying moonshine during Prohibition.

How far? As mommy said, it depends. When the skip is in, the noise is the only limit but that is as true at 4 watts as 400; you cannot work what you cannot hear. Some 'bi-linears' include receiver preamps that as my Dad would say are as useless as a third tit and not nearly so decorative; they just make the noise louder. And, unfortunately, a lot of the noise comes from people running a gazillion watts to get to the truck up front or to get a break in Valley Park. So pretty soon, 4 watts gets you four feet and 400 gets you forty so it's kind of a horse apiece.

Its called the Problem of the Commons: when everybody owns something no one is responsible for it. So if you grazed sheep on the village Commons it was to your personal advantage to buy a lot of of sheep and over-graze the hell out of it. But your neighbors did it as well so you had dust for the Commons and a shitpot full of starving sheep. With everyone running heat, no one can talk so you are more than likely just adding to the din and probably without much of a return on your investment. You are an adult and will do what you want but that is pretty well the size of the problem; just be aware that Smokey is not the only bear that is out to relieve you of spare cash.

I would suspect that your 148 is not exactly stock with respect to 40 channels either and that is not my problem up to a point. But you should be aware that going 'two up' on Channel 19 (everything above 11A in fact) puts you at 28.085 in the ten-meter ham band. This is most certainly not the Commons, it is mine. And trespassers should expect some buckshot in the butt. Different things are done in different parts of the country but in this area we set up photo traps using the nice cameras on the hiway and send pix to employers. At some point we will send them to the FCC and that is usually about $3k a pop for the individual and you might find yourself trucking for the Federal Marshalls if there is a pattern of it by a company. There ain't that many of us hams but we know everybody. Observe the 28 MHz border and the Federales and RCMP will stay asleep.

Keep your brain in gear and your hand on your wallet. There's bears in the woods.

Dick NuBK

Amps are illegal, but mine works great without a lisence.

2. How
> better would a 600W vs. a 300W be, and how far could I reach with each
> one of them? Thanks for all the help,

Not much difference between 600 and 300 watts. Go for the 300 watt unit.

> I have a CB in my truck (A Cobra 148 GTL that I've already worked on,
> and sounds just beautiful, but I want to be heard on side band, and

People who use sideband will be on channels 36-40 (or higher than 40) but
the problem with sideband about 95% of CBer's never use it. Get the linear
amp, at least then you'll be able to use sideband when the skip is up!

> continents on HF using milliwatt QRP transmitters.

Oh, COME ON, these people are also running high gain antennas on bands
not INFESTED with the level of noise present on 11m. With the type of
antennas these 'ol boys typically run, they need the watts to be heard
thru all the noise, and to overcome the ineffeciencies in their
antenna systems, and to communicate with the other good 'ol boys
running a similar power level and antenna system at the other end of
the link.

> >However, on VHF/UHF frequencies, greater than Line of Sight(LOS)
> >propagation is a fairly rare occurrance - so there is no initial
> >motivation for an average individual to run a high-powered amplifier
> >on these frequencies.
>
> Right, CB'ers would NEVER think of running amps on FRS.......

Of course they are going to try to extrapolate their knowlege of 11m
to 70cm... but IT DOESN'T WORK - because of LOS limitations, because
of the increased imporatance of transmission line loss and antenna
gain, and because of the fact that nobody else runs a
similarly-powered system, the clowns get NO REASONABLE FEEDBACK, and
so they slink back to the 11m slimefest, where they can interfere with
conversations of thousands over a five county area, instead of the
sheer boredom of only being able to interfere with little Billy or
Susie's conversation down the block for a few seconds - who just end
up putting on CTCSS, and don't even know that they are being
interfered with. There just isn't the same THRILL.

This is why we haven't been seeing this kind of activity on
GMRS/FRS/interstitials. If this high-powered amplifier activity were
REALLY occuring on these services, wouldn't you think the UHF and VHF
amps would be being sold right there alongside all of those HF amps at
the truckstops?

Source record: 125684

>If I were the ARRL I'd keep a watchful eye on 11 meters, and for good
>reason.

Well then, I guess it's a good thing you're NOT the ARRL.

BTW, Remember this?

"Here's a snip from the note I sent to the ARRL upon renewal of my
membership. Every little bit counts, so there's my $0.02 to the ARRL.
(Actually, my $0.02 cost me $120.00...:-0) This is how I believe we
can make positive changes. Propose them legally to the FCC and fight
for them, tooth-n-nail, if groups like the ARRL and/or NAB try to
interfere.

****
******
(Snip)

"I see nothing wrong with a friendly e-mail to your particular area
(division) representative (director) to inquire about their position
re. 11-meters. Should they respond that there is no ARRL position;
Politely refer them to RM-9807 and let them know that this is
considered by 11-meter interests to have been league involvement in an
issue for which they claim to have "no position." This is no longer
acceptable and they now have another aspect of "league involvement" to
consider for your vote.

I do NOT, however, agree with trying to get the ARRL to lobby the FCC
on behalf of 11-meter interests, merely NOT to involve themselves in
11-meter rule making proposals by and of legal 11-meter interest
groups/individuals."

The above was my response to a QRZ article re. the ARRL commenting
against RM-9807. While I applaud the league's vigilance in monitoring
"legislation in the 50 states that could affect Amateur Radio," the
ARRL's involvement in RM-9807 was certainly NOT appreciated. There are
many of us who are both CBers and ARO's and have no problem wearing
both hats. Speaking as an ARRL member, I'm quite displeased if even
one red cent of my membership fee went toward any labor involved in
commenting against a proposal that would have died all on its own due
to the ITU treaty agreement. As a CBer and 11-meter enthusiast, I'm
also displeased that a "private interest" group (Representing an
entirely different sector.) managed to adversely affect a rule making
proposal for which the majority of those most directly affected are in
favor.

As you can see I'm renewing my membership and adding a family membership in anticipation of my wife becoming licensed too. I'm not the type to cancel my membership (A recent trend from what I've read. How true it is, I don't know?) and bail out when things don't go as I'd prefer. I'll support the league on issues where I feel your making advances for AR and I'll also let you know (...and vote accordingly.) when I feel you're in the wrong, as evidenced above. Thank you for all your hard work and for taking the time to read and consider these words.

73 de Bert
KC2HMN"

You see, Aaron...I AM the ARRL...even if by just one (or two) vote(s).

Positive changes? As a CB'er, you are unwilling to take responsibility for (or even acknowledge) the widespread abuses of your fellow CB'ers (amp spurs, 10/12m bootlegging) that informs the ARRL's decisions with regard to CB. Instead you want them to "muzzle" the ARRL and the NAB in hopes the CB service might be formally declared a lawless alternative to ham radio. That's not working for "positive change", that's delusional.

A week after their marriage, the Redneck newlyweds paid a visit to their doctor.

"I can't figure it out doc, and I'm really worried," said the husband. "My testicles are turning blue."

"That's pretty unusual," said the doctor. "Let me examine you."

The doctor takes a look. Sure enough, the Redneck's testicles are blue.

The doctor turns to the wife. "Are you using the diaphragm that I prescribed?

"Yes, I am," she replied.

"And what kind of jelly are you using with it?

"Grape."

> run 100-200 watts on 27mhz, but ok to run 1500 on 28 and 29 ?

The biggest problem is the sort of "arms race" mentality that has
developed. It leads to a kind of "nuclear winter" in which the whole
band is so over-saturated with RF energy, that nobody except the ones
with the largest amplifiers can cut thru the noise to communicate.
Things are ESPECIALLY BAD on the HF bands(like 11m CB), because of
skip - as the noise gets propagated ALL OVER THE WORLD!

I would assume the same problem holds true on the HF ham bands to a
certain extent. However, hams are taught to use only as much power as
necessary to maintain a contact(I don't know how many follow the rule,
and how far they will go in interpreting it, but I'm going to assume
most follow it to a certain degree - although it isn't the "prime
directive" of each and every ham).

Linear amps are illegal for use on CB. Many people assume that more
transmitter power equals more contacts. But the antenna actually makes
the difference in who you are able to hear and talk to. (This is
assuming you intend to use CB to communicate rather than 'broadcast')

Also, I think you might be confusing CB sideband mode (no license, 12W
PEP limit) with amateur radio (1500W PEP limit, licensed).

Of course not - RF LOS propagation is different than Visual LOS
propagation.

Why don't you take a gander at this:

http://www.ictp.trieste.it/~radionet/2000_school/lectures/carlo/linkloss/INDEX.HTM

... pay particular attention to Huygens' Principle, all right?

And while you're at it - why don't you look into upgrading that
Technician Class license, Randy?

Now - if you all would stop spreading this high-power GMRS/FRS/MURS
amplifier bullshit, I'll stop having to debunk it. Fair enough?

Not a chance. With 8 zillion FRS units sold and more being
sold every day, outlawing their use would be a joke.

Cheers,
Bill K2UNK

> He received a notice the NAL was PENDING. He ignored it. Fine levied. He
> deserved it.

Not quite true. It is exactly true. They gave him no warnings as you keep
implying .. Twisty why is this so hard for you to understand. I have first
hand knowledge of what happend and you want to tell "me" what happended.
Twisty twsity you need to get off the drugs or whatever is clouding your
mind. You Don't know shit about what happened. I know exactly what happen
get over it. The facts are what they are and you don't know the facts,
perhaps if you make it worth someones
while we can get Mr. Smith to make a fool of you and give his side of the
story. But we all know you guys don't like the truth.

> Does that help convince yourself?

I don't need convincing Twitsy, I know the exact facts at hand something you
only wish you knew.
I have first hand knowledge what do you have? ..whats that .. nothing you
said......

> Educate yourself.

I have, and I know what are facts and what are not.

I see no such saturation of FRS. Another family and mine often
travel on weekends and we use FRS between cars. No saturation
encountered at all...much less even another occasional user
on the same channel. This is in the northeast, probably the most
densly populater area of the country.

Cheers,

No, you are making those post here, not me.

> Post as you wish I will do the same as I always have ... I don't need your
> consent You had your chance to call a truce but couldnt hold out ...

So you mean when you reposted that one about the motorcycle shop, that was
ok right? Fine I let that be. Again, I just asked
a question and you came un-glued, not me. If I can't ask a simple, easy
question without you getting all upset, then I would
suggest you take a chill pill, relax and have a smoke, because
you are way to high strung and paranoid about this group.

> Hope the $12.00 was worth it too... Hope you found out what you wanted?
>

What? Do you really think that I would spend more than 0, zip
nada, none on looking up your info? Please all I did was go to the Leigh
county web sight and that was the info provided, $12.00 for copies of most

records. I wouldn't waste a penny on your info, so you again can ramble on
about this.

"Twistedhed" <twistedhed@

II. BACKGROUND

2. In response to a complaint concerning interference to electronic equipment, the Philadelphia, Pennsylvania Field Office (``Field Office'') inspected the CB Radio Station operated by Mr. Smith. The inspection revealed the aforementioned violations. On January 12, 2000, the Field Office issued a Notice of Violation (``NOV'') for the violations. On January 21, 2000, the Field Office received a response to the NOV from Mr. Smith's wife, Lisa Marie Smith (``Mrs. Smith''). The response indicated that the violations had been corrected. On April 13, 2000, the Field Office received notice from the Commission's Gettysburg, Pennsylvania office that it received a referral from Senator William V. Roth concerning interference to home electronics caused by Mr. Smith's operation of the CB station.

" The Enforcement Bureau,
responded to Senator Roth indicating that the Field Office had performed an inspection of Mr. Smith's CB station, noted a number of violations, and issued an NOV. The letter further noted that Field Office had received a response to the NOV indicating that the violations had been corrected.

On October 3, 2000, the Field Office received a
referral from the Technical and Public Safety Division concerning interference to home electronics
apparently due to Mr. Smith's operation of a CB station. On October 15, 2000, an agent from the Field Office monitored Mr. Smith's CB station from a location within a block of the station. On November 1, 2000, agents from the Field Office inspected Mr. Smith's CB station and the inspection revealed the aforementioned violations.

On January 8, 2001, the Field
Office issued a Notice of Apparent Liability for Forfeiture,3 for $13,500 to Mr. Smith for the noted violations. On April 20, 2001, the Chief, Enforcement Bureau, issued a Forfeiture Order which affirmed the $13,500 forfeiture issued to Mr. Smith in the NAL. The Forfeiture Order stated that Mr. Smith had not filed a response, and we affirmed the forfeiture based on the information before us. "

4. In his Petition, Mr. Smith does not dispute our finding that he operated a CB radio station in violation of the Commission's Rules. He disagrees, however, with the statement in the Forfeiture Order that he did not respond to the NAL. Mr. Smith claims that Mrs. Smith prepared and forwarded a response on his behalf to the Commission's headquarters in Washington, DC. According to the Petition, Mrs. Smith did not send the response by certified mail, nor did she retain a copy of her letter. Nonetheless, argues Mr. Smith, the Enforcement Bureau did receive the response because the Enforcement Bureau subsequently requested that he furnish additional information electronically.

5. Mr. Smith asserts, however, that the basis for his Petition is the Smiths' ``desperate'' financial situation, which compels them to seek remission of the forfeiture. In support of his argument of financial hardship, Mr. Smith includes various financial documents.

5845. Call for a cease fire on the GMRS/MURS Amp issue.

I'm beginning a 1 week "Internet cease-fire" on this issue. After that, if no further claims of "High-Powered Amps on GMRS/MURS" are made - there will be no further need to defend against these rumors.

You see, it is kind of a chicken-and-the-egg issue... Amps on GMRS/MURS do no good, as long as there aren't enough other people with amps out there... and there isn't a market for amps, until there are enough amps out there... and without a market for amps, there aren't enough amps out there...

What few morons who have tried to use amps on GMRS up to this point have surely gotten such rotten results that they most certainly have long ago abandoned these "experiments".

Now - as long as people don't go around spreading rumors that there are amps on MURS/GMRS(which could encourage the growth of this "rotten egg" syndrome), then we can all live happily ever after, in a low-noise environment.

As for me, I'm going QRP on this issue...

One of the reasons Swan/Sillitronix used that Cinch-Jones plug was to
mount a mobile supply on the back. Probably was a bit hard singeing the
carpet in a mobile but it was made to be done. I expect the only vehicle
it truly fit in was a bread wagon.

Stew,
"A great number of years"... Are you sure that
FRS has been around for a great number of years?
How about 1 year (I think).
You know, the way you re-arrange facts to fit the
argument you're making, I think you're a politician.
Are you getting paid by the 'word', or by the pound of
fertilizer that you post?

So far, Stew baby, you're the only one 'spreading'
it. And the only reason you're doing that is so you
can 'debunk' it. You know, one of those, "make a problem
so you can cure the problem and be a hero" kinda things.
You ned help Stew...

Some people say 5 wpm is equivalent to "no code". If you accept that,
then we used to have an "all code" "no-code" license. A license where
the only permitted mode used to be CW.

I suspect that the "minimum power needed for the contact" is
observed by hams at the "order of magnitude" level. Can't reach that
interesting DX on 20 with just the 100 watts your transceiver
puts out, well, fire up the kilowatt linear.

Subject: Union Management Relations

I, the Penis, hereby request a raise in salary.
Lacking this raise, I shall strike.
I believe I am due a raise for the following reasons:

I do physical labor.
I work at great depths.
I plunge head first into everything I do.
I do not get weekends or public holidays off.
I work in a damp environment.
I don't get paid overtime.
I work in a dark workplace that has poor ventilation.
I work in high temperatures.
My work exposes me to contagious diseases.

Dear Penis,

After assessing your request, and considering the arguments you have raised,

the administration rejects your request for the following reasons:

You do not work 8 hours straight.
You fall asleep on the job after brief work periods.
You do not always follow the orders of the management team.
You do not stay in your designated area and are often seen visiting other
locations.
You do not take initiative; you need to be pressured and stimulated in order

to start working.
You leave the workplace rather messy at the end of your shift.
You don't always observe necessary safety regulations, such as wearing the
correct protective clothing.
You will retire well before you are 65.
You are unable to work double shifts.
You sometimes leave your designated work before you have completed the
assigned task.
And if that were not all, you have been seen constantly entering and exiting

the workplace carrying two suspicious looking bags.
Sincerely,
The Management

A blonde, wanting to earn some money, decided to hire herself out as a handyman, and started canvassing a well-to-do neighborhood. She went to the front door of the first house and asked the owner if he had any jobs for her to do.

"Well, you can paint my porch. How much will you charge?"
The blonde after looking about, said, "How about 50 dollars?
The man agreed and told her that the paint and other materials that she might need were in the garage.

The man's wife, inside the house, heard the conversation and said to her husband, "Does she realize that the porch goes all the way around the house?"
The man replied "She should, she was standing on it. Do you think she's dumb?"
"No....I guess I'm guilty of being influenced by all the 'dumb blonde' e-mail we've been receiving."

A short time later the blonde came to the door to collect her money.
"You're finished already?" he asked. "Yes" the blonde replied, "and I had paint left over, so I gave it two coats". Impressed, the man reached into his pocket for the $50.00.

"And by the way," the blonde added, "it's not a Porch, it's a Lexus."

There are any number of "opened up" 2M mobile rigs running on MURS. You can find them advertised as "MURS Ready" on EBay any time you like. Just did a search on "MURS" and found 50W Icom IC-2100H available, with prominent mention that it would work on the "new MURS" CB service.

Everyone knows what? That you think I am Aaron? who believes anything you
say your a confirmed, proven liar, proven many times over Mark, you can
speculate and insinuate I am aaron. I know i am not and aaron knows he is
not.

> That all the cb'ers in his area are engaged in some sort of

Nah, i don't think you paid a red cent, LOL all I just did was catch you
posting anonymously to the group that info. Here you even admit that you are
the one who looked at the lehigh county web page, and retrived the info... I
love it when you put your foot in your mouth. No you havent said a word to
me Landshark yoiu just use anon names to do it so I don't associate it to
you, but your to stupid and get caught all the time .. remember frenchy and
your other feeble attempts each time Mark caught red handed. You need to go
play with Professor or someone else ... Your not in my leauge, in fact I
have what 5- or 6 of you guys trying to take old george down well ..5 on 1
and ya know what I aint even broke a sweat... Do yourself a favor and drop
it Mark, let well enough be I have shown I would leave you alone but you
want to continue under anon accounts etc.. If that gets you off, and I know
now more than ever from the posts i just found you are into some Kinky shit.
Your a minor leauger and I am Barry Bonds capeesh!

5862. Cobra 40 channel CB, great for roadtrips

>outlets for experimenting.

The Class D Citizens Radio Service was never intended for hobby or
experimental use. It became that way by default. Because of
laziness as a resault of a well-known-inside pizzing contest between
certain managers at the FCC - it was easier to just nake thw rules
conform to what the outlaws were doing than to enforce them.

The GMRS and the FRS and the MURS were never intendced to be for
hobby or experimental usage. But alas, the same throwing-up-of-the-hands
that overcame the FCC with the CBRS overcame them for these, too.

FRS was a pet project of Radio Shack to sell lots of junky
throw-away radios and MURS was a pet project of EF Johnson to sell
more JobComm radios than its competitor could sell Color-Dot radios
which both were selling when a Business Radio License was required
for their usage. But the outlaws walked into CostCo or Wal-Mart,
bought the radios and used them unlawfully and the FCC again changed
the rules rather than enforced them.

If you think that these companies had the good intentions of "making
communications more accessible for the average person", I have a bridge
for sale that may be of interest to you....

Wanna do hobby? Wanna do experimenting? Get a ham license....it's
much easier now than when the CBRS and GMRS were first founded.

It's the way you're using them. On the highway, with the limited range, you WON'T find many other users. Even around Boston. (I'm below Worcester.) I've used FRS between multiple cars to the cape and to ski trips, and never run into someone on the highway.

On the other hand, I took FRS on a motorcycle trip. And stops up north of Lowel found a couple of channels busy. On ski trips to Vermont almost every channel is so busy as to be almost unusable. Going to things like NHRA (big events with top fuelers) FRS is one big party line. Even with PL.

Hey, even in the summer, when I was at the summit of Wachusett, I found about half the channels active. A lot from there, but I was also getting some pretty distant stuff. One conversation was hikers. Sounded like they were on Monadnock.

No arguement there. You are correct, but it doesn't change history. Be
that as it may, the CB band, the FRS band, and I'm sure the MURS band
are open to be used by THE PUBLIC, for whatever usage they seem to see
fit. GMRS is also (sadly) heading down the same road, now that
blister-pack GMRS radios are available to clueless people that think
they are just higher powered FRS radios.

>
> The GMRS and the FRS and the MURS were never intendced to be for

They were never intended, but nonetheless are, the cheap and dirty way
to play with radio without taking a test.

>

That seems to be a common thread for the FCC. "If you can't beat 'em,
change the rules". Had the FCC's presence been stronger, 25 years ago,
we wouldn't be having this conversation. But it's water over the dam

now.

>
> If you think that these companies had the good intentions of "making
> communications more accessible for the average person", I have a bridge
> for sale that may be of interest to you....

Oh no, I'm far from naive. Any commercial venture has as it's primary goal, the advancement of their profits. Clever marketing types will look to find any new niche, that they can exploit for monetary gain. Why do you think companies like Uniden and Yaesu, made ham radios that (Wink wink) could be easily modified for 11 meter usage? That was no accident, and their sales demographics proved it, even though they ended up flooding the market with gear that was destined for illegal usage. But their bottom line was much better....

>
> Wanna do hobby? Wanna do experimenting? Get a ham license....it's
> much easier now than when the CBRS and GMRS were first founded.

Seems almost too easy doesn't it? Why would someone play arounf with services like MURS, and FRS, when ham radio offers so much more? The theory test is disgustingly easy these days, so there's really no good technical reaason why someone would not go the ham route.

But many seem to harbor a deep rooted hatred for hams and the service in general. This is likely due to bad exposure to "stuffed shirt" types that feel that "real hams" operate DX on HF with at least 75% of all contacts on CW. The bad taste left has turned away many prospective radiko hobbyists. Maybe that's why there's interest in these other services.....

I agree that there always will be some that have no desire to leave the
11 meter band. But there are also others that like to test new waters.
Many upgrade to ham radio. Many find other avenues.

In my opinion, the only reason that GMRS has stood the test of time, is
that the service was not (Until very recently), widely marketed to the
public in places like Wal-Mart. Gear for GMRS was largely made up of
converted business radios, which are fairly expensive, and not always
easy to find, unless you cruise around in the radio world. In other
words, you had a need.

CB was also not very popular before the 70's, when the mass media
coverage of the "convoy" phenomenon, catapulted CB into every household,
and many companies started cranking out radios and selling them in
places like auto parts stores and 5 & 10 stores.

What will ultimately kill GMRS is the increasing marketing of cheap
"bubble pack" radios, with the predictable resultant rise in illegal
activity. The FCC, will once again run rather than fight, and will most

likely deregulate the band, and that will be the final death knell for a once usable band.

Actually, I don't think it's all that hilarious. While I may disagree
with some of what you say and pretty much all of how you say it,
there's no call for this.

> Question is, will you say he's NOT a troll because he's doing this "in

This is not trolling, Aaron. It's just malicious and inappropriate.

> If so, then may we assume that anyone who posts anything "in reaction"
> is not a troll?

Personally, I wouldn't dignify it with any reaction.

> all I'm saying.

And this is where your reasoning is flawed. Because the FCC hasn't publically flogged someone for running excessive power on MURS or FRS, you assume that it isn't happening. If I were to apply that logic to 11 meter CB, I'd conclude that since there are only a handfull of people getting NAL's from the FCC, that there are only a FEW people running illegally there. Anyone that's familiar with 11 meters, knows what a crock that is. The FCC isn't going to bust someone unless they are causing interference problems, that bring the illegal to their attention. If you can run a few more watts on MURS/FRS, and no one notices, do you think the FCC would care, or even know?

On the other hand, there is a certain amount of circumstantial evidence that would suggest that there is at least the intention or interest in running higher power equipment on the FRS and MURS band. I see radio mods for ham VHF/UHF radios that specifically address usage on those respective bands. I see radios for sale that mention being usable on FRS/GMRS/MURS. I guess it's a major selling point to have a single dual band radio handle 2 meter ham, MURS, the marine band, 440 ham, FRS, and GMRS. So why mention it, if it wasn't a desired feature by some?

Higher power operation on FRS and MURS wouldn't be particularly noticable either, due to the band's propagation (or lack thereof). Would you be able to tell the difference at a glance, between a 2W MURS station feeding a 10 element beam, 500 feet HAAT from a 50 watt mobile on the same frequency? Descrete use of ham gear on these frequencies will not attract much attention. But once Billy Bob finds out, it won't be so descrete.

Im thinking of purchasing an RCI 2950, but people have suggested to me that the K40 cannot handle more than 40 watts, I find this hard to believe considering the rating that this antenna has (superiority) against most mobile antennas. Can any elaborate ant further as to what this antenna can handle?

(SNIP)

Than't what I like about these ham
radio. The *easiest* way to start
a 2-terabyte-long multithread commentary
in newsgroups is make a PRO/ANTI-CW
message, or comment on illegal power
amplifiers being sold at Dayton or used
by CB'ers or others. Works every time
like Maalox or prunes. You would think
the topic of CW and/or amplifiers would
have died out long ago, but in ham radio
it seems, change comes, about as fast as
it takes for black strap molasses poured down
from the top of a 6 foot long fencepost in
Alaska to reach the bottom...

On a more curious note, it seems one of the ole
75 meter standouts is still going strong, even after
many years and the best efforts of R.H. Take a
listen down on 3.853 late at night for a certain
station in Co--oe Tx we all love to listen to.
He's mellowed out a tad from the "old days" when
"Johnny Reb" and "Lyin Dick" and the other
LA/TX/MS used to hang out down there, but still
an amusing SWL catch for U late nite insominacs.

z z z z z z z z z yawn......interesting

Look there are few CB sites that keep up to date C&L electronics are
still selling a midland 2001 on thier second hand page. Its been there
for a year or more.

Even Knights are getting lazy as they in the past updated their pages
on sundays but now its changed to bi weekly of later(the current is
dated may
12th)

A good site is http://www.thunderpole.co.uk but their prices for radios
are far to high but there aerial selection is good.

What I'd like to see is a simple price list from truck-king if they
don't have time to do much more. One problem with TK is that there is no
way you will find their site in a search you need to know the site
address so I
think if they want more business then they need to change that as when
people search for CB gear TK's is not a site they will find if they
don't know it.

>>Wanna do hobby? Wanna do experimenting? Get a ham license....it's much easier now than when the CBRS and GMRS were first founded. <<

>Seems almost too easy doesn't it? Why would someone play arounf with services like MURS, and FRS, when ham radio offers so much more?<<

How one can live to be as old as you and still not fathom how another's interest can be different than yours is nothing short of absolutely astounding. They are separate services and you seem to have come up against a lonely brick wall judging merely by your past and repeated efforts to blend and mesh cb and ham. Now you're attempting at adding FRS and MURS into the mix.
Using your illogic why would one drive an import when they can drive American? Why drive a car when one can drive a truck? Why drive when one can fly? Your question is circular and makes sense only to you. One has nothing to do with the other.

> The theory test is disgustingly easy these days, so there's really no good technical reaason why someone would not go the ham route.<<

Ahh, but most do not share your failure at comprehending such matters.

>But many seem to harbor a deep rooted hatred for hams and the service in general.<<

More bullshit direct from the source. The opposite holds more true among these pages and you are part of the problem by sewing thes falsehoods (read: LIES).

> This is likely due to bad exposure to "stuffed shirt" types that feel that "real hams" operate DX on HF with at least 75% of all contacts on CW. <<

Absolute ignorance if you truly believe that.

>The bad taste left has turned away many prospective radiko hobbyists.<<

Agreed. One needs merely to tune in here to see hammies like yourself badgering unlicensed ops for no reason other than to bitch and whine about generalities, innuendos, and what-if scenarios, rather than anything with substance..

> Maybe that's why there's interest in these other services.....
Dave<<

And you just can't figure out why the flocks never come.

>And this is where your reasoning is flawed. Because the FCC hasn't publically flogged someone for running excessive power on MURS or FRS, you assume that it isn't happening.<<

Ths is your flawed reasoning.
Since the DX is slipping away you need something else to attack. You're grasping, nothing more.

> If I were to apply that logic to 11 meter CB, <<

Another flawed reasoning attempt on your behalf. One of your dilemmas appears to be in recognizing the services are all separate and not inherent to each other. It is amusing that you are unable to do so, despite your numerous attempts.

>I'd conclude that since there are only a handfull of people getting NAL's from the FCC, that there are only a FEW people running illegally<<

(snip)

Well, then let's try your logic for a moment and apply it as you would. Judging from the minute number of cbers getting NAL's, there must be only a handful of cbers running illegally.
Ridiculous.
You can not pigeon-hole separate radio services no matter how you attempt to do so.

>Anyone that's familiar with 11 meters, knows what a crock that is. The FCC isn't going to bust someone unless they are causing interference problems, that bring the illegal to their attention. If you can run a few more watts on MURS/FRS, and no one notices, do you think the FCC would care, or even know?
On the other hand, there is a certain amount of circumstantial evidence that would suggest that there is at least the intention or interest in running higher power equipment on the FRS and MURS band. I see radio mods for ham VHF/UHF radios that specifically address usage on those respective bands.<<

The mere contention that this should somehow upset you has deeper meaning.

> I see radios for sale that mention being usable on FRS/GMRS/MURS. I guess it's a major selling point to have a single dual band radio handle 2 meter ham, MURS, the marine band, 440 ham, FRS, and GMRS. So why mention it, if it wasn't a desired feature by some?

This is the transcript of the ACTUAL radio conversation of a
British Naval ship and the Irish, off the coast of Kerry, Oct 95. Radio
conversation released by the Chief of Naval Operations 10-10-95:

IRISH: Please divert your course 15 degrees to the South, to avoid a
collision.

BRITISH: Recommend you divert your course 15 degrees to the North, to avoid
a collision.

IRISH: Negative. You will have to divert your course 15 degrees to the South
to avoid a collision.

BRITISH: This is the Captain of a British navy ship. I say again, divert
YOUR course.

IRISH: Negative. I say again, YOU will have to divert your course.

BRITISH: THIS IS THE AIRCRAFT CARRIER HMS BRITIANNIA. THE SECOND LARGEST
SHIP IN THE BRITISH ATLANTIC FLEET. WE ARE ACCOMPANIED BY THREE DESTROYERS,
THREE CRUISERS, AND NUMEROUS SUPPORT VESSELS. I DEMAND THAT YOU CHANGE YOUR
COURSE 15 DEGREES NORTH, I SAY AGAIN, THAT IS 15 DEGREES NORTH, OR
COUNTER-MEASURES WILL BE UNDERTAKEN TO ENSURE THE SAFETY OF THIS SHIP.

IRISH: We are a lighthouse. Your call.

Not quite true.
He received a notice the NAL was PENDING. He ignored it. Fine levied. He deserved it.

Not quite true.

>It is exactly true.<<

See above.

>They gave him no warnings as you keep implying<<

I'm not implying anything,merely stating what the FCC report reflects.

> .. Twisty why is this so hard for you to understand. I have first hand knowledge of what happend and you want to tell "me" what happended.<<

LOL! That's akin to you asking us "Are you going to believe what your lying eyes saw or what I tell you happened?"

> Twisty twsity you need to get off the drugs or whatever is clouding your mind. You Don't know shit about what happened. I know exactly what happen get over it. The facts are what they are and you don't know the facts, perhaps if you make it worth someones<<

Fact: Jerry Smith was notified and instructed to respond concerning a pending NAL.

Fact: Jerry Smith ignored the correspondence.

>while we can get Mr. Smith to make a fool of you and give his side of the story. But we all know you guys don't like the truth.<<

I call your bluff. Go get him. I am interested in why he ignored the feds.

Does that help convince yourself?

>I don't need convincing Twitsy, I know the exact facts at hand something you only wish you knew. <<

Your info is admitted hearsay. Mine was from the FCC.

>I have first hand knowledge what do you have? <<

The FCC report.

>Educate yourself.<<

>I have, and I know what are facts and what are not.<<

Then there is no need to take this any further.

Well again, this sums it it all up:

"By the Chief, Enforcement Bureau:

I. INTRODUCTION

1. In this Memorandum Opinion and Order (``Order''), we grant in part and deny in part the Petition for Reconsideration (``Petition'') filed on May 21, 2001 by Jerry Smith (``Mr. Smith''). Mr. Smith seeks reconsideration of a Forfeiture Order,1 in which the Chief, Enforcement Bureau, issued a monetary forfeiture in the amount of thirteen thousand five hundred dollars ($13,500) for willful and repeated violations of Sections 95.409(a), 95.410(a) and 95.411(a)(1) of the Commission's Rules (``Rules'').2 The noted violations involve Mr. Smith's operation of a Citizens Band (``CB'') Radio Station with a non-type-accepted transmitter, with a transmitter output power greater than four watts carrier power in the AM (A3) mode, and with an external RF power amplifier. For the reasons discussed below, we reduce the forfeiture amount to three thousand dollars ($3,000).

II. BACKGROUND

2. In response to a complaint concerning interference to electronic equipment, the Philadelphia, Pennsylvania Field Office (``Field Office'') inspected the CB Radio Station operated by Mr. Smith. The inspection revealed the aforementioned violations. On January 12, 2000, the Field Office issued a Notice of Violation (``NOV'') for the violations. On January 21, 2000, the Field Office received a response to the NOV from Mr. Smith's wife, Lisa Marie Smith (``Mrs. Smith''). The response indicated that the violations had been corrected. On April 13, 2000, the Field Office received notice from the Commission's Gettysburg, Pennsylvania office that it received a referral from Senator William V. Roth concerning interference to home electronics caused by Mr. Smith's operation of the CB station.
3. On April 28, 2000, the Chief, Enforcement Bureau, responded to Senator Roth indicating that the Field Office had performed an inspection of Mr. Smith's CB station, noted a number of violations, and issued an NOV. The letter further noted that Field Office had received a response to the NOV indicating that the violations had been corrected. Finally, the letter stated that any further problems should be reported

to the Bureau's Technical and Public Safety Division
(``TPSD''). On October 3, 2000, the Field Office received a
referral from TPSD concerning interference to home electronics
apparently due to Mr. Smith's operation of a CB station. On
October 15, 2000, an agent from the Field Office monitored Mr.
Smith's CB station from a location within a block of the
station. On November 1, 2000, agents from the Field Office
inspected Mr. Smith's CB station and the inspection revealed
the aforementioned violations. On January 8, 2001, the Field
Office issued a Notice of Apparent Liability for Forfeiture,3
for $13,500 to Mr. Smith for the noted violations. On April
20, 2001, the Chief, Enforcement Bureau, issued a Forfeiture
Order which affirmed the $13,500 forfeiture issued to Mr.
Smith in the NAL. The Forfeiture Order stated that Mr. Smith
had not filed a response, and we affirmed the forfeiture based
on the information before us."

He was warned and didn't pay attention, so these statements
that they will come after you right away are wrong.

Thank's George, you proved it wrong, I
knew you could do it.

5911. Referral for Criminal Prosecution

Newsgroup: rec.radio.cb
Date: 2002-05-30 15:30:55 UTC
From: Jane Doe <janedoe994@msn.comm>
Message-ID: <PArJ8.77721$Gs.7064697@bin5.nnrp.aus1.giganews.com>
Source record: 125776

Referral for Criminal Prosecution

In addition to other available penalties, any knowing violation of the Communications Act can result in a criminal fine of up to $10,000 and/or imprisonment of one year. In addition, the Communication Act authorizes criminal penalties for specific violations. For example, the Communications Act imposes a criminal penalty of up to $10,000 and one year of imprisonment for a party who is convicted of violating the sponsorship identification requirements of the Communications Act. The Commission itself does not have the authority to conduct criminal prosecutions or impose prison sentences for those convicted of violating the Communications Act. In appropriate cases, the Commission will refer the matter to the U.S. Department of Justice.

" This is why we haven't been seeing this kind of activity on
GMRS/FRS/interstitials. If this high-powered amplifier activity were
REALLY occuring on these services, wouldn't you think the UHF and VHF
amps would be being sold right there alongside all of those HF amps
at
the truckstops?
Stewart - N0MHS.......

It is happening "Big Time", but the "rule breakers" in this
case aren't likley to ever go to shop at truckstops or be "Truckers".
The Loads of people into running high power/unlicensed equipment at
FRS/GMRS/MURS are most likley to be people that have more of a
"purpose" for a semi-closed PL (ctcss)/DPL radio like MURS/GMRS/FRS.
These include loads of Amateurs that are using these radios to
communicate with the rest of their family & friends, the ones that had
no interest to jump thru hoops to take a Federal Amateur test, just to
play with a radio twice a year, also Scanner buffs, & the "cop/fireman
wannabees" that show up with a radio &/or camera on their belt at a
fire scene, but really don't belong to any law enforcement agency
(EVERY Cop or Fireman knows these guys WELL), also People that started
out in legitimate FRS, & then found out about higher power radios that
can be programmed to work with their existing handhelds.
Believe me, you may want to believe that EVERY "bad guy" is a
trucker, & every illegitimate use of any radio service will trace back
to a Truck driver or Truckstop, but that is a stupid conclusion.

Unlike CB amps that are "intentionally set up to splatter across half
their band"? Do the CB mags run articles on how to intentionally set
up an amp to splatter across half the band? Is there a splatter per
MHz spec for 27 MHz stuff?

You have to love this hobby, you learn something new every day. Thanks
Joe for carrying on the ham radio tradition. The world most
certainly is our oyster!

5921. Modified IC-2100 usage MURS

Newsgroup: rec.radio.cb
Date: 2002-05-30 19:13:17 UTC
From: horseshoe7@yahoo.com
Message-ID: <5f4fe4c2.0205301113.725ff1db@posting.google.com>

As I've said, I'm not going to post for awhile regarding the high-power external amp issue... but I've noticed that it has now evolved to somehow include the subject of ANY radio that runs more than 2W TPO - which is really a different subject.

I have no doubt that there ARE people running 50W IC-2100 radios on MURS. Oddly enough, the few cases I've heard of involving the IC-2100 have all involved Hams.

As far as the individuals selling these radios on Ebay, can't Ebay be contacted regarding the illegal wording in these ads? Also, can't the FCC be notified, so we can BUST these jackasses?

Stewart - N0MHS

The only "cease-fire" that is acceptable is your unconditional surrender that MURS topics on amateur radio newsgroups constitutes SPAM and that we get to flog you if you do it again.

5930. President Washington 8179PLL tech help needed

Newsgroup: rec.radio.cb
Date: 2002-05-30 21:16:20 UTC
From: David <david7500@mac.com.nospam>
Message-ID: <david7500-417FD6.14161830052002@newssvr14-ext.news.prodigy.com>
Source record: 125809

Okay, where to begin...
I recently bought an older President Washington Base Station CB that's been 'Golden Screwdrivered'. It belonged to a woman's grandfather who had passed away, and she didn't know much about it, but most everything on it works great aside from the problem.
The problem is that it won't put out anything over about (1) watt of RF power. I'm not sure if the problem is in the driver or the final transistor, but it doesn't appear that anything inside the CB is burnt up (at least visually).
I know the problem isn't either of my antennas (a 1/2 wave dipole and a 1/4 wave ground plane at 25ft.), because I hooked up a mobile CB to the same antenna and got great responses to my breaks (anywhere from 10 to 20 miles) with a SWR of 1.1:1 for the dipole and 1.2:1 for the GP.
The people that I've actually been able to talk to with the Washington say that my modulation is excellent (mostly due to my Silver Eagle probably) but I barely register on their meters at only 5 miles. These same people hit my meter between 5 and 9.
Also, whenever I key up the Mic, the RF meter moves about 3/4 of the way to 1, and even backing off VR1 all the way only allows the meter to reach 2.
I've checked the bias on VR8 and VR9 (driver and final), and while one reads the recommended .68 volts (measured from the center 'rotator' on the VR to the left leg), the other (VR9) reads voltages from 2 to 7.5 volts.
I've also readjusted L36 for power (as it had been hit by the 'screwdriver' too), though I didn't want to mess around trying to tune L37 if I don't need to (since it's soldered in the board).

It's my hunch that the problem lies somewhere in the output/final area, but since I'm not a knowledgeable CB tech, I don't know what exactly to check for.
Just to clarify, I'm not looking for a 'power tweak' or anything of that nature (that info is easy enough to find on the web), I just need to know what is responsible for output power and how to fix it.
Any help would be greatly appreciated.
Pyro

"BobC" 123@hotmail.com wrote:
>I find it saddening and irritating when questions (particularly
>about radio) have to be surrounded by an apology.

I know, you guys want respect and admiration for your illegal practices. And I'm giving you none. It must be horrible :)

I find it particlarly sad and irritating when for-sale ads and discussions about illegal aspects of CB are surrounded by sleazy and lame excuses like "I'm gonna use the amp as a doorstop" or "I'm using the radio only to listen". For God sakes, at least be man enought to admit the truth. You might at least get respect from among your own kind.

Speaking of apologies, I bet you guys love it when Jerry O. or some ham comes along, hat in hand, and begins a post with an apology: "Gosh guys, I'm not accusing anything of anyone, don't get the wrong idea, I don't care about laws being broken, I've done my share of crimes, and I think CB radio ops are fine intelligent citizens, but please consider that 28 mhz is a ham band, and we'd be awfully grateful if you'd please try not to transmit there..." etc.

Licensed amateurs don't owe bootlegers and outlaws any respect or apologies.

So, you admit that your "Brummie" suggestion was pure
imagination... FANTASY.

There you have it lads, an admission of Aarons TROLL posts. He
never really thought I was in Birmingham... he made it up for
Troll value.

Thank's for clarifying that one for us all, Aaron.

===
> > Have you considered counselling to get over your infatuation with me that

> "stalked"?
===

No, you claimed to have found where I am. You keep going on and on
about Birmingham, saying that I have links with the place.

I assumed that you had some reason to believe that I was in Birmingham,
like a bodged attempt at pinging my computer. I assumed that you were
not stupid enough to go off at the deep end with nothing but your
wild imagination.
I was obviously wrong... you are that stupid.

You're just not smart enough to track someone down for real, so
you fantasise about being a "Netcop", just like you fantasise about
helping the FCC to track down "federal criminals" (illegal CBers).

===
> Guess you'll have to put up another Voobner Parody web
> page, eh?

===

So, another fantasy of your's... you never really believed that one either, did you? That's why a request for proof of your *theory* got the two word reply of... "sod off".

Do you provide the FCC with evidence, or do you expect them to make arrests based the rantings of... Agent Aaron - Superhero.

I'll bet you even got Ludmilla to make you a cape.

Hi SD.

I heard about that... my Son told me, as he is a WWF fan.
It is a shame, as it was with Owen Hart.

Great entertainers, but they put their lives at risk so often. I am
surprised that all the Hardys and Dudleys are still alive, with
the crazy stunts they do.

Chyna is very lucky to be alive and still walking... carrying on
after a neck injury, re-injuring it and my Son says she went
back yet again, won the title, and now is out with the
same injury.

But then, what can compare to the crazy stunts carried out by
Jacky Chan. Even the rooftop scenes are done for real, although
he now has access to the technology required to fake the scenes.
Samo Hung also does all his own stunts, he does some incredible
things for his size.

All these great entertainers will live on in the memories of fans,
including new fans as the "classic" shows get repeated on TV,
long after they have gone.

Brainbuster.

> using one.

Hahaha this struck me funny. It sad in it's own right too.

I'm seeing more and more posts being made here that seem to apologize to Aaron (and others) for asking about things that may in some way be construed as illegal. I hear "well, I wouldn't really do this but....." or " hypothetically...if you do this what happens?...".

Gathering information or learning is nothing to be apologizing for nor is it in any way illegal or immoral. If someone doesn't like a technical question? Oh well! Deal with it!

I find it saddening and irritating when questions (particularly about radio) have to be surrounded by an apology.

Who is Aaron anyway? Why do you seem to elevate him and suck up? If you want to know something about a radio..whether its an export, illegally here or what have you..just ask the damn question. Don't apologize for wanting information.

I get the impression that just the fact that you admitted to having anything other than a Yaesu, Kenwood,Icom etc is gonna make Aaron think less of you anyway. Why suck up now? I bet you're damned already. ahhahahaa

You have a 2950? You want it to cover 11 meters? Do it already. No one but Aaron and his tribe even care.

There I feel better now.

5946. President Washington 8179PLL tech help

Newsgroup: rec.radio.cb
Date: 2002-05-30 23:12:20 UTC
From: Me <db7500@pacbell.net.nospam>
Message-ID: <B91BFFE2.12F%db7500@pacbell.net.nospam>
Source record: 125833

First off, I apologize if this shows up twice, but my first post on this got lost in virtuality (or is still tied up on my news server, so we'll wait and see).
Anyway, the problem I have is this. I recently acquired a President (Uniden) Washington SSB CB Base radio that has been 'Golden Screwdrivered', and as such, it only puts out about 1 watt of power.
I've searched around the net and found a few recommended adjustments, such as rebiasing the final and driver, but I'm not exactly sure what I'm doing.
I took voltage readings from VR8 and VR9 (center 'rotator' to left leg of resistor) and while VR8 reads the required .68 volts, VR9 reads approximately 2 volts on it's left leg, and almost 7.5 volts on it's right leg (and I think it's supposed to be the same as the driver bias of .68v).
Needless to say, I think something's fried in it.
I've adjusted L36 for max power, but that only took it up about 1/4 watt.
SSB also doesn't have the required power it should have (swings up to 4 watts at the most).
I'm positive the problem isn't either of my antennas, since my half-wave dipole has an SWR of 1.1:1 and my 1/4-wave Ground Plane has an SWR of 1.2:1.
I can hook up a mobile CB on a power supply in place of the Washington and get good responses to all my breaks (from 10 to 20 mile range) yet with the Washington I can barely reach 5 miles.
The people that can hear my signal (with the Washington) say that my modulation is excellent (probably due to my Silver Eagle), but that I only hit their meters aqt about 1 dB. They hit me at 5-9 dB, and one person I was talking to was even using a Washington.
Could this radio possibly have one of those 'supermod' kits designed to drive linears or something? The woman I bought it from didn't know much about it since it had been her grandfathers who had passed away, she just knew that it had TX problems, though the RX section seems to work fine.
Anyway, if anybody can help me isolate the problem, I'd greatly appreciate it.
Many thanks.
Pyro
P.S. It has been channel modded, and the clarifier opened up. The power mod was never applied, as TR32 is still there, and R94 and R97 are both still 10K resistors. I think it just needs some TLC (crossing my fingers).
Thanks again.

Well if you need more channels I suggest anything with a PLL02A or uPD858.
Just search ebay, when you find something you like use this link to help you
determine what PLL the radio has.
http://members.aol.com/kmorris210/cbradio/pll.html
Use ctrl + F to quickly find the radio on that page.
As for power I don't think it makes a hell of a lot of difference from one
radio to another. Better of to find a small amp. Even the cheapest 2 pill
blows away any peaked out radio.

Good choice of Radio.......
Bad choice of antenna.......
The K40 is a center-loaded 1/4~, which is better than a base-loaded
1/4~......
But not as good as top-loaded 5/8~ antenna such as the Firestik FSII which
is my favorite.
The antenna utilizes a "variable-pitch,wire-wound,top-loaded,5/8wave design
with a tuneable-tip".
I recently finished a non-official comparison test of mobile antennas: the
test was geared towards truckers because i am one of them.
The criteria required that the antenna would mount on the top of a
west-coast
mirror bracket in the vertical position and still clear a 13'6" bridge.
For all practical purposes this requirement narrowed the field slightly.
Anyway i settled on the FSII. It is broad-banded, has a flat SWR across
11meter,
and increased signal-strength on transmit and receive. I give it 5*****

>How about 1 year (I think).

FRS was created by rules effective July 8, 1996.

MURS was created by rules effective November 13, 2000.

GMRS (Formerly Citizens Class A) has been around for about 50 years.

RF amplifiers don't increase your range, they only make the signal louder at a given distance.
The antenna is the limiting factor on how far you can be heard , which is also dpendent on the receiver that is giving you the signal report.
Amplifiers make it possible to talk to people you can't hear,huh whadidhesay.
A 600watt amp. will increase your signal strength by 1s-unit compared to a 300watt amp.
If ya can't reach out and touch them with 25watts........ya aint doing it right.
Forget about P.E.P.
Think about E.R.P.

Since you didn't mention building a below-ground counter-poise i am going to
guess that the antenna is grounded to the frame of the trailer (better hope
lightning don't strike) apparently the antenna is using the trailer as a
reflective
surface and has a distant lobe in the near-field which exists at the
opposite side of the trailer from where the antenna is.
It aint rocket-science neighbor.....

Evidently... there is a ham selling modified 2100H radios on Ebay, and
he mentions MURS:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1355829496

The funny thing is, there are actually jackasses out there willing to
bid $255 for a $149 radio...

http://www.gigaparts.com/radioindex.php

Oh, BTW, did I already mention that this seller is a ham.

Mounting an antenna or two of them on West Coast mirrors is a highly specialized task for which Firestick does an admirable job in spite of butchering standard terminology. And when it is all over, one doesn't know much about anything other than mounting antennas on West Coast mirrors.

For mounting on 4-wheel vehicles a K-40 is a classic design with a big enough coil to do the job at some mechanical sacrifice; that coil is up in the wind putting a twist on the mounting which is why center-loading is not used in practice as much as theory might suggest it should be but if you can mount it the kitty will work fine. The high-Q necessary to handle the power will make it narrower than some antennas but efficient radiators are generally not broad to begin with. And center-loading does require more coil for a given length than does base loading so coils capable of power tend toward the large. As radiation is a function of current and most of the current is below the coil try to mount it in the clear rather than next to a truck cab.

As antennas in general go, the Firestick is one lossy SOB as evidenced by the broadband nature of the beast. But by getting a lot of the radiation above the cab and solving a really silly counterpoise problem it does, in the restricted environment of truck cabs, do a fine job. It is a 5/8 about like I am Jake the Plumber; the idea is to capitalize on the aura and myth that surround 5/8 antennas at VHF. Where there is a job to be done, it may be a quarter-wave, it might be a co-linear, but it sure as hell won't be a 5/8. A firestick is a special-case rubber duckie, known in the trade as a 'helical dummy load', but is a fine compromise in a really rough environment to engineer. For that they get credit and deservedly so but miracle-workers they ain't.

Glad you feel better. Anyway, the Icom will transmit where it receives, regardless-HF-LVHF-VHF. I'm sure that kills Aaron, even though the capability is not used. Just knowing that he's staying up nites, worrying about it gives me much comfort.

> >about radio) have to be surrounded by an apology.
>
> I know, you guys want respect and admiration for your illegal
> practices. And I'm giving you none. It must be horrible :)

* I dunno about the "you guys" thing. Speaking for myself, I don't require
anyone's respect or understanding when it comes to me playing CB with or w/o
an amp, or using freq.'s outside CB. You can all prattle on about it all you
wish. I'm still going to do it when I feel like it. I neither promote it nor
apologize for it. I certainly don't feel the need to cowtow to Aaron or his
tribe if I ask for info regarding the means to enable it.

> I find it particlarly sad and irritating when for-sale ads and
> discussions about illegal aspects of CB are surrounded by sleazy and
> lame excuses like "I'm gonna use the amp as a doorstop" or "I'm using
> the radio only to listen". For God sakes, at least be man enought to
> admit the truth. You might at least get respect from among your own
> kind.

* My sentiments exactly!

> Speaking of apologies, I bet you guys love it when Jerry O. or some
> ham comes along, hat in hand, and begins a post with an apology: "Gosh

> I think CB radio ops are fine intelligent citizens, but please
> consider that 28 mhz is a ham band, and we'd be awfully grateful if
> you'd please try not to transmit there..." etc.

* I don't know who Jerry is. I understand the "get more flies with honey"
approach. Admittedly he/they have a point about not sneaking into the ham
band above CB. I actually agree. Here's a notion..you hamsters keep your
rigs off CB and CB'ers keep off the Hamster bands. Works for me.

> Licensed amateurs don't owe bootlegers and outlaws any respect or
> apologies.

-Aaron-

*Agreed. Nor Do I feel I must "suck up" to those hams or wannabe's. I do expect those Hams and wannabe's remember their past and prevent themselves from scourning others for the very same things they did/do not long ago. Nothing worse than a reformed something or other.

Tend to agree but somewhere along the line agreement has to be reached on what in hell is meant by 'distance'. If we are talking about skip distances power has exactly the effect Mad Dog describes. You go where the propagation gods take you.

If we are talking about trying to bellow from one end of a convoy to the other over an open band with everyone running a 30 % modulated kw on Channel 19, it is an issue of survival.

If someone mentions 'ground wave' power is no issue whatever because it basically does not exist at 27 MHz.

So what do we mean?

Wow George/XXXXX you sure get
around, did you enjoy your time with her? I thank you
for posting a picture of your wife with me, but I'm sorry
to say she is just not my type. Now if I ever need to have
my truck pushed, be assured I will call on her.....LOL!!!
Oh by the way, isn't posting binaries to a non
binaries group against your TOS? I'm not sure maybe
you could clarify that for us <snicker>

Actually George/XXXXX my post went like this:

"Now George again, please e mail me direct about which one you called, I'd like to hear about it. You are blowing hot air again and you know it. For $12.00 dollars anyone can get a copy of the land deed at 1385 DEVON CIR, ALLENTOWN, PA 18104, Leigh County Offices, so please don't cry"

I don't see the link that you posted in the above e mail.

Ya know, I can still remember the very first time
I heard the "J--es is a drunken queer"
and the "We'll be glad when your dead
you rascal you.." songs on 53 come thru the
speaker and ole Slobber's reaction to it...

Nearly passed a bite of a ham-n-cheese
sandwich and sodawater thru my nose at
200 PSI... I was laughing *so hard*
my sides ached fer a 1/2 hour later.

Those were the good-ole-dayz - grin
Thank glub I got that classic on
reel-to-reel for posterity someplace :)

Photo gadgets...that's a good one. A group of retired, good for
nothing,
social security leaches, were overheard at the donut shop discussing
hunting the "Outlaw Freebanders"......Hey Voobey, George said, lets go
take
the photo gadget that Dick sent us and sit by the side of the road all
day.
Maybe we can catch some illegals. Gee George, Voobey said, that sounds
like fun. But you cant take anymore pictures of Mr. Winky. The Walmart
photo lab dropped a dime on me for the last roll of 24. Let me call my
wife so as I wont be in trouble for not bring back the preperation H
from Walmart. She says life in our trailer isn't the same without
it....ever since she tripped over my 2 meter dipole and landed on the
sprinkler. and so the saga of a day in life of useless individuals
began...

If a base loaded mag mount is your thing, look at the Wilson 1000, I have had 2 K40s, both developed cracks near the little chrome "collar" at the top of the coil, and have seen a number of others do the same, Good antenna but construction seems a bit shaky, I had an Armstrong base loaded MagMount that was great, had a neat swivel type whip ferrule that allowed you to keep the whip verticle no matter what angle the surface was, but I don't know if they are still around...

> What is MURS and why should I give a shit?

MURS (Multi-Use Radio Service) is a no-license VHF personal radio service which operates on 151.820, 151.880, 151.940, 154.570, and 154.600 MHz with a maximum Transmitter Power Output limit of 2 Watts. The FCC MURS rules permit voice and data communication; as well as external gain antennas. Unlike some other services, there are no restrictions on business activities with MURS, and the 2W power limit works as a major benefit for allowing more users per channel. With the latest changes to the FCC MURS rules, most any low-power VHF Part 90 business radio that was certified before May 2002, can be used on at least some of the MURS frequencies(radios certified after 5/2002 will only need to be certified under Part 95). Additionally, the new rules no longer specify an ERP (Effective Radiated Power) restriction of 2 watts - so it is now possible to build quite efficient stations, using external gain antennas.

Thanks for all the help folks, and to Mr. Mad Dog who took the time to write me directly, and expressed exactly what he wrote above. Didn't much understand what he said, but like I told him, I don't claim to be no genius. Just a retired ol farm boy who enjoys playin CB in the evenings. Don't have no fancy equipment, none of those big ol "kicker" things that I hear about, just my old Realisitic Navaho asnd my Antron 99. Heck, like I was tellin him in my reply, when I started playin, I had me an old 23 Channel JC Penneys Pinto hooked up to an Astro Plane antenna and a Kraco Super Deluxe in the truck! Remember those? I guess compared to what folks run nowadays, that was pretty primative, but I thought I had me a hot outfit at that time..>LOL.
Anyway, I appreciate all the help you boys gave me, guess the cheapest and simplest thing to do would just be to try to get it up higher. Got some more mast pipe, and gonna see if my boy will come over and help me raise it up.

Thanks much, and Blessins to you folks.

Dale

Can you name anything associated with technology in any form that has not
advanced or progressed over the years?

> All those Hams who could build a radio, are dead and gone.

Pure baloney.... there are a ton of them, I can name quite a few right in my
"own backyard" as it is. (And some of these are not the old timers either)

>
> What that leaves, is the Hams who like to interface things to a
> pre-built radio. There is a lot of experimentation and fun in doing
> those projects.

Who's fault is that? Could it be the manufacturer's? I cannot buy enough
parts to make a "decent" rig even 1/10 of the quality and stability of
today's rigs locally here where I live. Christ, the manufacturers are also
responsible for the virtual death of some of the VHF and above bands.

>

Just a matter of individual perception.

> The numbers will never again reach what there was at the peak
> of Ham radio. The commercialization of RF to one or two
> companies in America will continue, and Ham radio will go to

> the same place that model railroaders, and slot car racing went.
>

Hmmm.... the numbers have (for the most part) gone up every year. Granted some years were definitely not as large in growth as others, but almost every year for the past 20-30 years has appreciated some level of growth, not decline. If there is a death in ham radio, it is going to come from lack of promotion on a national level down to the local/club level and of course the personal level. If we also spent as much time whining about what is supposedly so shitty about ham radio, and spent that time educating prospective hams and new hams we would have a greater growth that we currently do have.

> Hobbies die, and people die. MURS is still-born.
>

That is true if you want them to, or a person can be proactive and work for positive change or at least to keep things at a even keel.

Ryan

anonymous coward,

I was looking for help with a couple of questions, not looking for idiotic flames by fuck offs like you. Was there any reason for you to post? No, there was not. You just wanted to attack my personal character, and not help out with the conversation. Get a life dipshit. You obviously are a coward, or you wouldn't have posted something like that, in a discussion that was going sufficient.

Now, as to the legality of linear amplifiers, here we go. I know they are not legal, but I was just wondering some things about them. There's nothing wrong with that. You have to learn sometime.

Maybe if I had bought a dictionary and was a cool person that talked in cap locks I could get some help. Who knows? Thanks for all the help everyone else besides this fuck nut.

> band gear illegally on the FRS channels.

I agree that the "quality" of the transmissions on the FRS band leave
little to be considered. In my area FRS is used mostly by kids playing
"cops and robbers" or some other such game.

But I am curious, how can you tell who is running a ham radio or high
powered business band radio? They sound pretty much the same (Except
that most don't have that annoying "roger beep" like some of the newer
FRS radios). Unless one is technically equipped to take field strength
measurements, I can't see how you would be able to tell the differnce
between a legal FRS radio, and a ham radio, by casual listening (Unless
the operator is dumb enough to announce it).

>
> Again, what makes you think MURS is going to be any different?

MURS will be worse. There is a ton more gear available (for very cheap
too) for the VHF bands. Ham, old commercial, etc. I can buy Motorola
Micors, or GE MASTR 2's for less than $75, and with a channel element
change, they're right there, with up to 100 watts of commercial quality
FM.

> Any help would be greatly appreciated.

It is likely that the final transistor is bad. The high base voltage
that you saw on the bias pot is a valuable clue. Many times the
transistor will fail such that a small amount of power (Made by the
driver) will "leak" through. Be careful though, as this type of failure
is usually a collector to base short and it usually fries components in
the biasing circuit.

Pardon me for saying this, but you sound like you're backpeddling a bit.
In all reality, what's the difference between someone running a 2W HT
into a 100 watt output amplifier, or someone running a modified Motorola
Micor at 100 watts?

It's not about "amplifiers" as much as it's about ignoring the power
limits of the law.

>Speaking of apologies, I bet you guys love it when Jerry O. or some ham comes along, hat in hand, and begins a post with an apology: "Gosh guys, I'm not accusing anything of anyone, don't get the wrong idea, I don't care about laws being broken, I've done my share of crimes, and I think CB radio ops are fine intelligent citizens, but please consider that 28 mhz is a ham band, and we'd be awfully grateful if you'd please try not to transmit there..." etc.<<

And it's apparent that you hate it. Must be the enormous amount of respect they garner opposed to yourself. It's called diplomacy and tact. I've learned more about harmonics and deviated signals from one who took the time to actually show me something instead of attempting to badger, embellish, insult and lie about mundane trivial matters in order to further an unrelated personal agenda. If any were to recruit another into the world of hammie radio, it would be those types that anger you so.<<

>Licensed amateurs don't owe bootlegers and outlaws any respect or apologies.<<

Agreed. They certainly owe no apologies, but they owe it to their service and hobby to do the right thing, and that is through education and diplomacy, not exactly your strong point. Because one merely speaks of freebanding does not make them guilty of anything other than what your tunnel vision allows your mind to see.
It is your shortcomings that prevents the maturity needed to recognize that just because someone speaks of a different view does not deem them worthy of no respect.

Why George/XXXXX,
I posted a link to the picture, your the one that
posted the picture sport. Now if someone complains,
it wont be about me posting a link, that's ok, but
binaries in a non binary group is a no no.

Landshark

Try again, I have in the past built a lot of ham gear, some from
kit, some completely homebrew and can still do it. Just because
you are incapable of building something doesn't mean everyone else
is also.

6016. OT: How does my computer work?

Newsgroup: rec.radio.cb
Date: 2002-05-31 16:06:04 UTC
From: b_swollocks@hotmail.com
Message-ID: <67c9d341.0205310806.1c17b0ae@posting.google.com>
Source record: 125881

Computers work using a system known as binary. This, as the name suggests, means that they consist of lots of bits and bytes and rams and things all chucked into a metal case with a green light stuck on the front with a bit of chewing gum. (NB: Some machines have a red light on the front. This is a sign that they are defective and must be immediately returned to the manufacturer with a violently worded demand for a refund.)

Even though that brief overview left you sitting there thinking "WOW! now I know everything there is to know about computers!", we are going to reinforce your newly found genius by looking at how they work in greater detail. Because we want to, and there isn’t anything you can do about it (insane laughter "ha ha ha " etc.). Despite what you may think, your computer is just a machine and cannot hurt you, unless it falls on you from an upstairs window or you get your face caught in the printer or cooling fan or something.

Mouse Mat & Processor
The most important component in a computer is fast becoming known as the MMX. This stands for Mouse Mat, with an X on the end to make it sound all technical and important (like with "Playstation", "Malcolm" or "Bacon and"). The mouse mat contains thousands of micro-logic circuits which calculate little things known as "binary stuff". Once calculatorized, the "binary stuff" is sent via cables, or airmail, to a less important component called the processor or CPU (the P stands for processor and the C and U don’t mean anything). A processor is a little flat thing mad of solid black plastic.

Hard Drive
You may think that a "hard drive" is London to Manchester in under 3 hours, or straight onto the green on a par 4, but it is in fact a hard thing that lives inside your computer whether you like it or not. A bit like a squatter. This disk (as it is now safe to call it, as we can categorically confirm that yes, it is indeed a disk) stores a sticky plasticine like substance, known as data, until it is needed. It is normally needed when you wish to save information from your computer, which is done by forcing fluffy jelly babies to make imprints in the squidgyness with their bare hands. The "Hard Drive" is an internal component of your PC, it has no user serviceable parts inside, the jelly babies are NOT edible, and it can not be removed as any attempt will result in the breakdown of the fabric of the space/time continuum, severe enough to cause total destruction, annihilation and vegetarianism in the universe as we know it, unless you’re a qualified repair man.

Floppy Drive
A floppy drive is just like a hard drive except for the fact that it is floppy, ie. It’s a floppy hard drive. What once was hard is now floppy, hardness begat floppiness. To insert a floppy disk into the floppy drive, both items must be strengthened with wooden splints as excess floppiness could be hazardous in an unventilated room. Floppy disks have been designed by major manufacturers as a cost effective method of transmitting unwanted viruses.

The Hamster
The hamster is a small device, usually found on top of the mouse mat, attached to the computer by a small cable. It is, for obvious reasons, named a hamster (because of it’s preference for dried sunflower seeds and running around in a little wheel). The primary function of the hamster is to give you something furry to hold onto with your right hand when using the computer.

The Red L.E.D. (Light emitting doodah)
The LED is there so that you can see in the dark when using your computer at night. It also doubles as a torch. If you are going out at night then you can take your PC with you to guide your path in the evil darkness. The LED is essentially an essential household essential and makes re-mortgaging the house to buy a PC all seem worthwhile.

CD-ROM
CD-ROMs are a waste of money and a con. No PC worth it’s weight in breakfast cereal free gifts should have one. They are only installed to provide a few minutes of entertainment for the user, who watches the draw open and close electronically and apparently by magic. If you really do need CD access on your PC then just glue a cheap Hi-Fi to the front and install a copy of "Microsoft - I’ve just sellotaped my stereo to my computer", widely available on CD-ROM.

Monitor
A monitor is a telly, not a very good one though, since you can’t get satellite or cable (or telly). This problem was discovered only after production had begun, and custom jelly moulds had been manufactured, so at present there is little they can do to rectify the problem, although a software upgrade may be in the pipeline.

Sound Card
The sound card is a thin sheet of cardboard. No-one has been able to determine why, but when this cardboard is inserted into a computer it emits exactly the required sounds at exactly the required times. Convenient.

Memory
All computers have to have a certain amount of memory. This is available in two format’s: RAMs or ROMs, and which you choose is down to personal preference. A lot of people will make jokes about 8 RAM being 8 male sheep, but these people are stupid and have no sense of humour. To set the record straight: 8 RAM is not 8 male sheep, but

four male sheep. They are internally doubled by the processor. That’s what DX2 stands for. The "D" is the ancient something word for sheep, the "X" is the symbol for multiply and the "2" means 2 (as 2 usually does). These sheep are plugged into the motherboards S.I.M.M. sockets (Sheep Interface Memory Module). Female sheep are not normally used for memory due to their tendency to overheat and explode. Experts believe they have solved this problem with the introduction of E.D.O. (ewes don’t overheat) RAM.

6017. OT: Chess: The rules .....

Newsgroup: rec.radio.cb
Date: 2002-05-31 16:11:00 UTC
From: b_swollocks@hotmail.com
Message-ID: <67c9d341.0205310810.5623be22@posting.google.com>
Source record: 125882

Chess is played on a plank of wood patterned to ressemble the table cloth you always see in Tom and Jerry cartoons, or being worn by Yassa Arrafat. Each player has 16 peices of plastic which each have names and their own unique identities, but then people who don't have their own chess sets just don't understand do they? I mean, it's just like another member of the family isn't it?

The pieces are as follows:

First there are 8 prawns. These prawns have a mental dissorder which means that they can only walk forward in a straight line, unless an opposition piece is situated in a diagonal direction to it, in which case they hurl themselves at it in a mad blood fury and kill it.

Then standing behind them (from left to right) are:

A rook. This rook is in no way a rook, it has no feathers, it can not fly and does not eat worms. Instead it is a castle (slight misprint in the rules me-thinks) with bricks and everything, even loft insulation. This castle can actually, however move (but not fly). It can only move in straight lines but just like a real castle it can move as far as you possibly want it to, but not over the edge of the board because that would be unrealistic. Some people see the movement of the castle as a disadvantage but it’s a bloody castle, it moves, it wouldn’t normally, what more do you want!?

The Knight. The knight is not actually a knight in metal armour with a big horse between his legs and neither is it the opposite to day. In fact it is a horsey, and, like a real horsey, it can jump over things, but unfortunately it can not kick people in the nads. As far as movement is concerned another disapointment is encountered, that being that this horse is pissed and can only stagger about irrationally.

The Bishop. Many historians have wondered why the Bishop, a man of the cloth has been represented by a piece somewhat resembling a large penis. This piece in true Christian style runs around the board diagonally, hacking people to death with a big stick. We have heard that in the next rules update there will be rules to allow the bishop to fly about the board with a jetpack dropping napalm on everyone.

The Queen. The queen stands next to the penis (slight subliminal message me thinks again. Me is doing a lot of me thinking me thinks). The queen can move in any direction whatsoever which could explain why the king always looks haggard.

The King. The king is married to the queen. He is usually a bit pissed off because of the media invasion of his privacy. The king only moves

slowly because he is an old aged pensioner, although we have heard that in the next edition that he will be getting one of those electric buggies that old people always have outside the post-office to drive about in. This will also have a spiked blade on the front for mowing down prawns with.

The remaining three pieces are yet another Knight, Penis and Rook. A bit of repetition there. The reason for this is that these pieces are evil twins of the originals on the left intent on enslaving them and bringing mankind quivering to it’s knees.

Taking. Other than the prawns, all pieces take/kill/murder/disembowel pieces that are in a space that they move onto. When this happens one of the trainspotter types takes the other trainspotter type's piece away, leaving their own in it's place, and the losing trainspotter type will start to cry/tantrum. There are invariably cases of Chess players gauging their eyes out when they attempt to wipe them with the arm of their cagoules.

Other rules in terms of movement include something called castling. This is where the king disappears off inside the tower for a quick pint and no-one sees him again for the next few hours.

The game is won when one specky dies of boredom.

Useful Tactics:

Here a selection of useful tactics to help you win a game of chess.
Say to your opponent "Look behind you, there’s a space shuttle", then kick him in the bollocks.
Fake a heart attack and when your opponent runs off to call an ambulance hide all of his pieces in your shoe.
Set light to one of your opponent's pieces
Set light to the chess board
Set light to your opponent
Say "This is shit, I give up" and then go off for a fag.
Impersonate a sprout.

Isn't there a "commercial" Yaesu model HT that is/was marketed for the
155's and 460's which looks like an FT50RD? I thought some of the
vendors were closing out battery packs for those a year or so ago,
seliing them as spares for the FT50's etc.

Everyone knows amps on 11 meters are illegal. So what? So we have the
holier-than-thou schmoes out there trying to convince us that we ought
to change our ways. Look, I,ll make it real simple 4 u self appointed
cops and monitors or whatever the hell u refer to yourselves as. We
know
the risks, if we take the chance, most of us are ready to deal with
the
consequences should the heat come down. I have respect for MOST hams,
but I achieve the same results at a fraction of the cost. If I bleed a
neighbor, all they have to do is knock on my door. We will work it
out.
I have been in the same area for quite some years and have no
problems.
If I am not hurting anyone, why the hell should you care WHAT I do?
The

bottom line is you shouldn't. Get a life. You guys that bitch about us freebanders and "peaked" radios have way too much time on your hands. I
don't need to run anymore than 30 watts where I am located and I talk all over the world......yes.. on the freeband. Nothng pleases me more than one of you cb rambos to come in to my conversation and start preaching about rules. God, I love to squash you suckers.

Only after determining the drive is not diabetic or have hi blood
pressure. Viagra has done more for the health of the American male than
anything since penicillin. Give it a complete check up, make sure it is
not depressed and send it on its way.

> Micor at 100 watts?

HUGE difference. The "bigger is better" External High-Power Amplifier
"arms race" culture that exists on 11m CB leads to a never-ending
escalation in amplifier power... nowadays 3000W "just isn't enough".

With use of integral radios(with internal amplifiers) on GMRS/MURS,
there is at least a somewhat "reasonable upper power bound" that
exists on these services. Even in light of this, it should be noted
that the vast majority of users on MURS use rules-conforming handheld
radios having <= 2W TPO capability. While there have been a few
recent reports of hams using and/or selling low-cost 50W IC-2000
mobile ham rigs on MURS - these individuals are being pressured to
"cease and desist" their high-profile illegal activities.

Additionally, while it can't be ruled out that some individuals have
experimented with the usage of external high-power amplifiers on
MURS/GMRS, it is quite clear that the usage of these devices is not
culturally endemic on these services, as it is on 11m CB.

> It's not about "amplifiers" as much as it's about ignoring the power
> limits of the law.

While I understand your point; as a MURS user, I'm personally much
more concerned with an individual running an external 500W amplifier,
than I am with someone running a 5W handheld with a rubber duck dummy
load antenna.

> damned already. ahhahahaa
===

No doubt.

I use a legal CB with no extra amps (rx or tx), my antenna is the legal length, I have even been known to advise people againt "linears" and have not told anyone that they need one... yet I am "damned".

Dick is an Amateur who does not even use CB, let alone an illegal one... yet he is "damned" by the "AKCers".

"Jerry O." even speaks up against some illegal use... but now he is on the "damned" list.

They are not interested in the law, just a good argument. Otherwise they would
leave the legal CBers alone and concentrate on the legal issues, but they just cannot do that.

PINOCCHIO
Pinocchio had a human girlfriend who would sometimes complain
about splinters when they were having sex.

Pinocchio, therefore, went to visit Gepetto to see if he could help.
Gepetto suggested he try a little sandpaper on his manhood and Pinocchio
skipped away enlightened.

A couple of weeks later, Gepetto saw Pinocchio bouncing happily through
town and asked him, "How's the girlfriend?" Pinocchio replied, "Who needs a
girlfriend?"

~~~~~~

CINDERELLA
As Cinderella sits crying in the garden, her fairy godmother appears and
promises to provide Cinderella with everything she needs to go to the
ball, but only on two conditions.

"First, you must wear a diaphragm."
Cinderella agrees. "What's the second condition?"

"You must be home by 2 a.m. Any later and your diaphragm will turn into a
pumpkin."
Cinderella agrees to be home by 2 a.m.

The appointed hour comes and goes and Cinderella doesn't show up.
Finally, at 5 a.m., Cinderella shows up, looking love-struck and very
satisfied.

"Where have you been?" demands the fairy godmother. "Your diaphragm
was supposed to have turned into a pumpkin three hours ago!!!"
"I met a prince, Fairy Godmother. He took care of everything."

"I know of no prince with that kind of power! Tell me his name!"
"I can't remember, exactly... Peter... Peter... something or
other..."

~~~~~~

MICKEY MOUSE
Micky Mouse and Minnie Mouse were in divorce court.
The judge said to Mickey, "You say here that your wife is crazy."
Mickey replied, "I didn't say she was crazy, I said, "she's f**k*ng Goofy."
